War-related separations challenge families in many ways. The worry and uncertainty associated with combat deployments provokes anxiety in family members left at home. Lengthy separations may challenge the personal, social, and economic coping resources of families at home. In this war, thanks to medical advances, many service members who previously would have died of their injuries are returning home to live long, although altered lives. As a result, families are facing the additional challenge of assisting service members who have experienced amputation, traumatic brain injury, and psychological wounds. These challenges are faced not only by service members in the active component of the armed forces, but also by service members in the National Guard and Reserves. In response, the Department of Defense has launched unprecedented efforts to support service members and families before, during and after deployment in all locations of the country as well as in remote locations. These support efforts are focused not only on medical care, but also mental health care and logistical support. Research about families and war tends to move forward in fits and starts associated with major conflicts, and there is currently an increasing flow of family research moving into the scientific domain. Military Families and the Aftermath of Deployment focuses heavily on the aftermath of deployment for families. It is the first compilation of such chapters released in relation to the wars in Iraq and Afghanistan, and includes contributions from leading researchers from diverse disciplines and arenas, including universities, the Veterans Administration, and the Department of Defense, as well as international researchers from Canada, and Croatia, among others. This work will be of use to graduate students and researchers in family studies, social work, counseling, military science, psychology and sociology.

How the partnership between Ford and the UAW, forged through more than fifty pivotal events, transformed their capacity to combine good jobs with high performance. In 2009, the Ford Motor Company was the only one of the Big Three automakers not to take the federal bailout package. How did Ford remain standing when its competitors were brought to their knees? It was a gutsy decision, but it didn't happen in isolation. The United Auto Workers joined with Ford to make this possible—not only in 2009, but in a series of more than fifty pivotal events during three decades that add up to a transformation that simultaneously values work and delivers results. The pivotal events—some planned and some unplanned; some at the facility level and some at the enterprise level – were not all successful. All had the potential, however, to further the transformation, and all provide insight into how large-scale system change really happens. The authors—each with years of experience with Ford, the UAW, and the industry—provide an unprecedented inside look at how core operating assumptions are shifted and at the emergence of integrated operating systems for quality, safety, and other aspects of the enterprise. It is a transformation built on a foundation of dignity and mutual respect, guided by a vision of combining good jobs with high performance.

*Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€which includes all primary caregiversâ€are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.*

*Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In Unequal Treatment, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? Unequal Treatment offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. Unequal Treatment will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.*

*Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.*

Military intervention always has been and always will be an important part of foreign policy, a tool to further national interests and influence world events. Many scholars have tried to explain the intervention behavior of states in crises, conflicts, and wars. When and why do states intervene, and what are reasons for nonintervention? What conflicts and crises are more likely to call for intervention, and why? When is intervention successful? The explanations are manifold and include political, military, economic, social, environmental, domestic, and humanitarian realist intentions, ranging from security, power, and national interests, as guides to state action; to emphasis on international trade and economics; and to domestic politics. Some argue for explanations based on idealistic aspirations, such as democracy and human rights. Many studies focus on a mix of different reasons. From this vast field, the author has selected international crises involving any form of U.S. activity in the years 1946-2006. Within these U.S. activities, the author distinguishes between crisis response with and without naval forces, as this is a naval forces as a response to international crises and to contribute to a better understanding of when and how the U.S. Navy is deployed.

As libraries move into the 21st century, quality management has become a key focus of the effort to create a service culture that meets - and indeed exceeds - customer requirements. The language of customer service has become common in the library and information sector, as have many of the techniques associated with the provision of customer-focused services. However, there is a danger that customer service may be seen as a 'bolt on' to existing core provision in the form of feedback mechanisms, information leaflets and customer-training sessions. One of the challenges facing managers is to go beyond the acknowledgement of the importance of a customer focus, and to develop an understanding of how this focus can be embedded in the culture of their services via strategic and operational management. This new management guide addresses this challenge. Contributed by LIS professionals with extensive experience in the management of public and academic services, each chapter presents a good practice guide to an element of strategic or operational management with the customer placed at centre stage: the users' perspective; planning and policy making; leadership and management; human resource planning; marketing as a tool for LIS managers; assuring quality; planning buildings for customers and services; developing a service culture through partnerships; virtual service. Readership: This book is essential reading for managers of library and information services from senior to team managers, and also for all those involved in devising strategy and policy for staff and service development. It is relevant to libraries and information services in any area of the world.

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.
