For the first time, Paris Photo presents an original journey within the galleries: "Paris Photo seen by ..." In 2012, Paris Photo entrusted David Lynch with the task of choosing from among the works exhibited by the gallery owners--an original way for the public to contemplate the works whilst at the same time discovering the artist's aesthetic universe." Julien Frydman, Director of Paris Photo, writes: "Looking at David Lynch's selection is a bit like visiting Paris Photo in his company; a dialogue begins; we do look at the works 'together, ' but first of all we look at them in a different way, through a 'Lynchian' filter. Our first perception undergoes a distortion, the reading becomes a plural one and reveals the metaphoric power of every image; I believe it will be the same for other visitors, only that Lynch's subconscious takes over: the body, the strangeness, the potential narrative and the ambiguity of the image are always present.

By the millennium most government departments and businesses will rely on some sort of GIS to conduct their everyday activities. The power and speed of such a tool in planning, research and managing spatial databases is invaluable. However, it is becoming increasingly apparent that the legal implications of GIS are as convoluted as those raised by the Internet. This is already becoming a field which is stretching legal systems around the world to their limit. Users, practitioners, developers, and custodians of data need a clear guide. This book, avoiding technological and legal jargon, clarifies the issues of the rights, limitations, and responsibilities of GIS. Geographic Information Systems and the Law addresses the legal relations between those who provide data and those who use the data. Areas covered include: * the legal regimes and economic aspects of GIS * contract law governing information technology * data and information in a digital age * legal liabilities -- damages, negligence, and standards of care * public access and ownership of information * privacy and security issues -- intellectual property and copyright * international law and the globalisation of information technology The analysis is illustrated by an international range of case material from the United Kingdom, the United States, Australia and New Zealand. This issue of Finance & Development looks at the economic and financial impact of climate policy choices. It points to concrete solutions that offer growth opportunities, driven by technological innovation, sustainable investment, and a dynamic private sector. The private sector can stop supporting or subsidizing industries and activities that damage the planet and instead invest in sustainable development. Governments can roll out policies to fight climate change and the destruction of nature. The paper highlights that technological change and innovations are central to longer-term efforts to mitigate climate change by developing alternatives to fossil fuels. A new, sustainable financial system is under construction. It is funding the initiatives and innovations of the private sector and amplifying the effectiveness of governments' climate policies—it could even accelerate the transition to a low-carbon economy. The Bank of England's latest survey finds that almost three-quarters of banks are starting to treat the risks from climate change like other financial risks—rather than viewing them simply as a corporate social

**responsibility. Banks have begun to consider the most immediate physical
risks to their business models—from the exposure of mortgage books to
flood risk to the impact of extreme weather events on sovereign risk.
Covering the years between the end of the Hundred Years War and the
beginning of the Thirty Years War, War and Society in Renaissance
Europe explains the part war played in the lives of individuals in early
modern Europe. Beginning with a survey of conflicts and an analysis of
the "military reformation" in the ways in which wars were fought, it goes
on to investigate the problems of recruitment in an age when those taking
part in wars formed a society of their own. The book concludes with a
study of the impact of war on civilians and the more pervasive but indirect
impact of war-induced shifts in the economy, the incidence of taxation,
and the nature of government.**

Stephen King is no stranger to the realm of literary criticism, but his most
fantastic, far-reaching work has aroused little academic scrutiny. This study of
King's epic Dark Tower series encompasses the career of one of the world's
best-selling authors and frames him as more than a "horror writer." Four
categories of analysis—genre, art, evil, and intertextuality—provide a focused look
at the center of King's fictional universe. This book reaches beyond popular
culture treatments of the series and examines it against King's horror work,
audience expectations, and the larger literary landscape.

Although manual labor and theoretical invention might now seem
separate ventures, they are closely linked processes. The
Mindful Hand explores innovative areas of European society
between the late Renaissance and the period of early
industrialization where the enterprise of knowledge and
production relied on the most intimate connections of thought

and toil. It explains how philosophers and laborers collaborated to pioneer technical change alongside knowledge formation. The essays gathered here help show how these projects were pursued together, yet why, in retrospect, the very categories of science and technology emerged as seemingly distinct endeavors.

The conservation of metallic archaeological and historic artefacts is a major challenge whether they are ancient bronzes or relics of our more recent industrial past. Based on the work of Working Party 21 Corrosion of Archaeological and Historical Artefacts within the European Federation of Corrosion (EFC), this important book summarises key recent research on analytical techniques, understanding corrosion processes and preventing the corrosion of cultural heritage metallic artefacts. After an introductory part on some of the key issues in this area, part two reviews the range of analytical techniques for measuring and analysing corrosion processes, including time resolved spectroelectrochemistry, voltammetry and laser induced breakdown spectroscopy. Part three reviews different types of

corrosion processes for a range of artefacts, whilst part four discusses on-site monitoring techniques. The final part of the book summaries a range of conservation techniques and strategies to conserve cultural heritage metallic artefacts. Corrosion and conservation of cultural heritage metallic artefacts is an important reference for all those involved in archaeology and conservation, including governments, museums as well as those undertaking research in archaeology and corrosion science. Summarises key research on analytical techniques for measuring and analysing corrosion processes Provides detailed understanding of corrosion processes and corrosion prevention Discusses on-site monitoring techniques
