The bestselling book, now with a new preface by the authors At once a bold defense and reimagining of capitalism and a blueprint for a new system for doing business, Conscious Capitalism is for anyone hoping to build a more cooperative, humane, and positive future. Whole Foods Market cofounder John Mackey and professor and Conscious Capitalism, Inc. cofounder Raj Sisodia argue that both business and capitalism are inherently good, and they use some of today's best-known and most successful companies to illustrate their point. From Southwest Airlines, UPS, and Tata to Costco, Panera, Google, the Container Store, and Amazon, today's organizations are creating value for all stakeholders—including customers, employees, suppliers, investors, society, and the environment. Read this book and you'll better understand how four specific tenets—higher purpose, stakeholder integration, conscious leadership, and conscious culture and management—can help build strong businesses, move capitalism closer to its highest potential, and foster a more positive environment for all of us.

Getting someone to tell the truth is an essential skill that very few people possess. In the boardroom, classroom, or our own homes, every day we interact with others and try to get the truth from them. People are often untruthful out of fear of negative consequences associated with divulging information. But if a person is made to forget the long-term outcomes of lying, he or she can be influenced to disclose sensitive information that's being withheld. The aim is to encourage the person to remain in short-term thinking mode, shifting focus away from the long-term ramifications of telling the truth. As former CIA agents and bestselling authors of Spy the Lie, Philip Houston, Mike Floyd, and Susan Carnicero are among the world's best at detecting deceptive behavior and eliciting the truth from even the most accomplished liars. Get the Truth is a step-by-step guide that empowers readers to elicit the truth from others. It also chronicles the fascinating story of how the authors used a methodology Houston developed to elicit the truth in the counterterrorism and criminal investigation realms, and how these techniques can be applied to our daily lives. Using thrilling anecdotes from their careers in counterintelligence, and with easy-to-follow instructions, the authors provide a foolproof means of getting absolutely anybody to give an honest answer. Get the Truth is the easy and effective way to learn how to get the truth every time.

The Iron Redskin

Uses market research and analysis to provide values for vintage or collectible instruments, including information on more than eighteen hundred brands accompanied by eleven hundred photographs.

Indian is a magic name in motorcycling. Its mention brings to mind machines with flamboyant bold striping, lithe of appearance and, seemingly even at rest, poised for flight. There were over two dozen makes of motorcycle on the market during the heyday of motorcycling in the United States. Yet in the minds of many enthusiasts, none of these quite approached the verve, style, artistic functionality of design or handling abilities of the Indian. The Iron Redskin is the story of the most loved of American motorcycles. It is a vast work that has taken many thousands of hours to compile, yet it is one of the most readable and interesting motorcycle histories ever to be published.

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained.
