In contrast to the classical books which largely focus on separate, individual physicochemical and biological aspects, this book aims to integrate the frontiers of knowledge on the fundamentals and the impact of physicochemical and biological interactions and processes of AOCs in soil, sediment, water and air. The specific objectives of this book are to address: (1) fundamental biophysico-chemical processes of AOCs in the environment, (2) occurrence and distribution of AOCs in air, water, and soil, and their global cycling, (3) the state-of-the-art analytical techniques of AOCs, and (4) restoration of natural environments contaminated by AOCs. The book also identifies the gaps in knowledge on the subject matter and as such provides future directions to stimulate scientific research to advance the chemical science on biophysico-chemical interfacial reactions in natural habitats. By virtue of complex nature of the interactions of AOCs with different environmental components and matrixes, no single available technique and instrument is satisfactory yet for determining their fate, transport, availability, and risk in the environment. In order to fully understand the biophysico-chemical interactions and processes of AOCs in the environment, it is critical to know chemical, physical and biological properties of AOCs and their analytical techniques. The book is unique because of its multidisciplinary approach as it provides a comprehensive and integrated coverage of biophysico-chemical reactions and processes of AOCs in various environments, associated analytical techniques, and restoration of natural environments contaminated by AOCs. This volume collects new contributions to research on mafias, organized crime, money

laundering, and other forms of complex crimes, gathering some of the most authoritative and well-known scholars in the field. The chapters for this volume are original peices written in honor of the retirement of Dr. Ernesto U. Savona, highlighting his research and legacy. Throughout his academic career, Professor Ernesto U. Savona has investigated complex crimes ranging from organized crime, to economic crime, to money laundering. In his work, he has tried to bring together academics, policy makers, and practitioners to bring understanding for crime problems and innovative solutions. His passion towards the practical application of the findings of scientific research led him to found Transcrime in 1994, which is today among the most important criminological think-tanks in Europe. This important book is aimed at scholars studying criminal policy and research, particularly in the areas of criminal networks, organized crime, white collar crime, the history of criminology. Launched in 1977 by the Christian Broadcasting Service (originally associated with Pat Robertson), the ABC Family/Freeform network has gone through a number of changes in name and ownership. Over the past decade, the network—now owned by Disney—has redefined “family programming” for its targeted 14- to 34-year-old demographic, addressing topics like lesbian and gay parenting, postfeminism and changing perceptions of women, the issue of race in the U.S., and the status of disability in American culture. This collection of new essays examines the network from a variety of perspectives, with a focus on inclusive programming that has created a space for underrepresented communities like transgender youth, overweight teens, and the deaf.

This book explores the circulation and reception of popular discourses of achieving girlhood, and the ways in which girls themselves participate in such circulation. It examines the figure

of the achieving girl within wider discourses of neoliberal self-management and post-feminist possibility, considering the tensions involved in being both successful and successfully feminine and the strategies and negotiations girls undertake to manage these tensions. The work is grounded in an understanding of media, educational, and peer contexts for the production of the successful girl. It traces narratives across school, television and online in texts produced for and by girls, drawing on interviews with girls in schools, online forum participation (within the purpose-built site www.smartgirls.tv), and girls' discussions of a range of teen dramas.

This is the first collection of review articles in one volume covering the very latest developments in exoplanet research. This edited, multi-author volume will be an invaluable introduction and reference to all key aspects in the field this field. The reviews cover topics such as the properties of known exoplanets and searching for exoplanets in the stellar graveyard. The book provides an easily accessible point of reference in a fast moving and exciting field.

Principles of Bone Biology provides the most comprehensive, authoritative reference on the study of bone biology and related diseases. It is the essential resource for anyone involved in the study of bone biology. Bone research in recent years has generated enormous attention, mainly because of the broad public health implications of osteoporosis and related bone disorders. Provides a "one-stop" shop. There is no need to search through many research journals or books to glean the information one wants...it is all in one source written by the experts in the field The essential resource for anyone involved in the study of bones and bone diseases Takes the reader from the basic elements of fundamental research to the most sophisticated concepts in therapeutics Readers can easily search and locate information quickly as it will be online with this new edition

This book discusses performance-based seismic and wind-resistant design for

high-rise building structures, with a particular focus on establishing an integrated approach for performance-based wind engineering, which is currently less advanced than seismic engineering. This book also provides a state-of-the-art review of numerous methodologies, including computational fluid dynamics (CFD), extreme value analysis, structural optimization, vibration control, pushover analysis, response spectrum analysis, modal parameter identification for the assessment of the wind-resistant and seismic performance of tall buildings in the design stage and actual tall buildings in use. Several new structural optimization methods, including the augmented optimality criteria method, have been developed and employed in the context of performance-based design. This book is a valuable resource for students, researchers and engineers in the field of civil and structural engineering.

of thousands, but can also be a source of intense debate and controversy. This insightful new Handbook addresses a number of central questions, including: How are host cities selected and under what economic conditions? How are these events organized, and how is local resistance overcome? Based on historical and empirical experience, what are the pitfalls for the organizers of these events? What are the potential economic benefits, including any international image effects? How can the costs be minimized and the benefits maximized for host cities and countries? How do these mega events impact the challenges of globalization and what is their environmental legacy? Compiled and edited by two internationally renowned sports economists, the expert contributions elaborate on the specific mechanisms of the bid processes, analyse the determining factors of winning bids, and illustrate how to construct future bid campaigns. Underpinned by case studies from four continents and by theoretical considerations, the reasons for seemingly systemic cost overruns are explored and analysed, as are the effects on national and regional employment and income, property values, non-traditional economic variables (such as psychological and marketing benefits) and urban branding and transformation. The Handbook also reflects on important elements of design of the games in order to better plan, prepare and allocate resources – including, for example, sustainability issues and the use of campaigns to secure positive perceptions. This book provides an up-to-date analysis of the financing and economic impact of mega sporting events, as well as a full discussion of how host cities can maximize the benefits from their experience. As such, it will prove a fascinating read for academics, students, researchers and policymakers with an interest in economics and public sector economics generally, and more specifically, in the economics of sport.

The O.C.: A Critical Understanding, by Lori Bindig and Andrea M. Bergstrom, is a feminist cultural studies analysis of the hit television series *The O.C.* (2003-2007). The show is examined in terms of five ideological aspects as well as audience reception, auteur theory, aesthetics, and reality television imitators. Bindig and Bergstrom place *The O.C.* in a larger social context and explore the potential ramifications of popular media texts, as well as its lasting influence on media and culture.

This edited work presents the most current evidence on osteosarcopenia from bench to bedside, which is expected to facilitate the understanding of this syndrome and to develop preventive and therapeutic strategies. With our aging population, chronic diseases such as osteoporosis and sarcopenia are becoming highly prevalent. Fortunately, our understanding of the bone and muscle interactions has increased in recent years. This has allowed to the coining of the term osteosarcopenia to describe a syndrome in which these two diseases overlap. This overlap between osteoporosis and sarcopenia has major negative effects not only on our older adults but also on health systems worldwide. Readers will find a highly translational approach that starts with a summary of recent discoveries on stem cells biology, muscle and bone interactions - including the role of local bone and muscle fat - followed by comprehensive reviews on myokines (i.e. myostatin), osteokines (i.e. osteocalcin) and adipokines (i.e. interleukins) as major players and determinants of bone and muscle loss with aging. In addition, the role of sex steroids (i.e. estrogens, androgens), and calciotropic hormones (i.e. parathyroid hormone, vitamin D) in the pathogenesis of this syndrome is also reviewed. Moreover, using practical

diagnostic and therapeutic tips, this book summarizes the clinical characteristics of osteosarcopenic patients thus facilitating the diagnosis and treatment of this syndrome in clinical practice. Finally, the book presents the case for the Falls and Fractures Clinic as the optimal model of care for this syndrome, aimed to avoid fragmentation and optimize osteosarcopenia care, and simultaneously prevent falls and fractures in older persons. This book offers relevant information on the mechanisms of osteosarcopenia, and a practical guide on how to identify and treat this geriatric syndrome and its adverse outcomes, which are dramatically affecting our aging population. The work is written by leaders in the field and is especially suited not only to any researcher in the musculoskeletal arena but also to medical specialists and allied health professionals involved in the care of older persons.

The Origins of Ancient Vietnam explores the origins of civilization in the Red River Delta of Vietnam and how related studies can inform our understanding of ancient societies, generally, and the foundations of Vietnamese culture, specifically. Long believed to be the cradle of Vietnamese civilization, this area has been referenced

by Vietnamese and Chinese writers for centuries, many recording colorful tales and legends about the region's prehistory. One of the most enduring accounts relates the story of the Au Lac Kingdom and its capital of Co Loa. Founded during the third century BC, according to legend, the fortified city's ramparts still stand today. However, there are ongoing debates about the origins of the site, the validity of the literary accounts, and the link between the prehistoric past and later Vietnamese societies. The Han Empire's later annexation of the region, combined with the problematic accounts found in the Chinese chronicles, further complicates these questions. Recent decades of archaeology in the region have provided new perspectives for examining these issues. The material record reveals indigenous trajectories of cultural change throughout the prehistoric period, culminating in the emergence of a politically sophisticated society. Specifically, new data indicate the founding of Co Loa by an ancient state, centuries before the Han arrival. In The Origins of Ancient Vietnam, Nam Kim synthesizes the archaeological evidence for this momentous development, placing Co Loa within a wider, global setting of emergent cities, states, and civilizations. The subject of nonfinite clauses is often missing, and yet is understood to refer to some linguistic or contextual referent (e.g. 'Bill preferred _ to remain silent' is understood as 'Bill preferred that he himself would remain silent'). This dependency is the subject matter of control theory. Extensive linguistic research into control constructions over the past five decades has unearthed a wealth of empirical findings in dozens of languages. Their proper classification and analysis, however, have been a matter of continuing debate within and across different theoretical schools. This comprehensive book pulls together, for the first time, all the important advances on the topic. Among the issues discussed are: the distinction between raising and control, obligatory and nonobligatory control, syntactic interactions with case, finiteness and nominalization, lexical determination of the controller, and phenomena like partial and implicit control. The critical discussions in this work will stimulate students and scholars to further explorations in this fascinating field.

The Pedagogy of Pop: Theoretical and Practical Strategies for Success, edited by Edward A. Janak and Denise Blum, is a tool for educators at all levels to embrace infusing popular culture into their teaching in ways that both embrace and resist contemporary thinking. Its chapters provide a range of theoretical and practical suggestions—some widely accepted, some somewhat controversial—to elicit discussion and spark creativity amongst all students.

In the 1970s political and economic changes to the world order led to an emerging “globalization” credited with the ceding of state sovereignty to a “de facto world government” of transnational corporations and with the anti-globalism movement directed at countering it. Mexico, however, has maintained the salience of the national unit in the form of the state as a ruling apparatus and as the target of organized, non-state, political opposition. This study examines the transformation of Mexico’s social and political organization from state corporatism to transnationalized corporatism, a form distinguished by the effect that International Financial Institutions and the World Trade Organization have on the state’s

relationship to the rest of society. By exploring how non-governmental organizations, political parties, unions and social movements (notably the Zapatistas) engage with the state under neoliberalism, this work significantly emphasizes the continued relevance of corporatist structures in an environment of electoral democratic reform.

dynasty in football history—from the acclaimed ESPN reporter who has been there from the very beginning. Over two unbelievable decades, the New England Patriots were not only the NFL ' s most dominant team, but also—and by far—the most secretive. How did they achieve and sustain greatness—and what were the costs? In *It's Better to Be Feared*, Seth Wickersham, one of the country ' s finest long form and investigative sportswriters, tells the full, behind-the-scenes story of the Patriots, capturing the brilliance, ambition, and vanity that powered and ultimately unraveled them. Based on hundreds of interviews conducted since 2001, Wickersham ' s chronicle is packed with revelations, taking us deep into Bill Belichick ' s tactical ingenuity and Tom Brady ' s unique mentality while also reporting on their divergent paths in 2020, including Brady ' s run to the Super Bowl with the Tampa Bay Buccaneers. Raucous, unvarnished, and definitive, *It ' s Better to Be Feared* is an instant classic of American sportswriting in the tradition of Michael Lewis, David Maraniss, and David Halberstam.

Systems Biogeochemistry of Major Marine Biomes A comprehensive system-level discussion of the geomicrobiology of the Earth ' s oceans In Systems Biogeochemistry of Major Marine Biomes, a team of distinguished researchers delivers a systemic overview

of biogeochemistry across a number of major physiographies of the global ocean: the waters and sediments overlying continental margins; the deep sub-surfaces; the Arctic and Antarctic oceans; and the physicochemical extremes such as the hypersaline and sulfidic marine zones, cold methane seeps and hydrothermal ecosystems. The book explores state-of-the-art advances in marine geomicrobiology and investigates the drivers of biogeochemical processes. It highlights the imperatives of the unique, fringe, and cryptic processes while studying the geological manifestations and ecological feedbacks of in situ microbial metabolisms. Taking a holistic approach toward the understanding of marine biogeochemical provinces, this book emphasizes the centrality of culture-dependent and culture-independent (meta-omics-based) microbiological information within a systems biogeochemistry framework. Perfect for researchers and scientists in the fields of geochemistry, geophysics, geomicrobiology, oceanography, and marine science, *Systems Biogeochemistry of Major Marine Biomes* will also earn a place in the libraries of policymakers and advanced graduate students seeking a one-stop reference on marine biogeochemistry.

Split into four sections, Seeing Fans analyzes the representations of fans in the mass media through a diverse range of perspectives. This collection opens with a preface by noted actor and fan Orlando Jones (Sleepy Hollow), whose recent work on fandom (appearing with Henry Jenkins at Comic Con and speaking at the Fan Studies Network symposium) bridges the worlds of academia and the media industry. Section one focuses on the representations of fans in documentaries and news reports and includes an interview with Roger Nygard, director of Trekkies and Trekkies 2. The second section then examines fictional representations of fans through analyses of television and film, featuring interviews with Emily Perkins of Supernatural, Robert

Section three explores cultural perspectives on fan representations, and includes an interview with Laurent Malaquais, director of *Bronies: The Extremely Unexpected Adult Fans of My Little Pony*. Lastly, the final section looks at global perspectives on the ways fans have been represented and finishes with an interview with Jeanie Finlay, director of the music documentary *Sound it Out*. The collection then closes with an afterword by fan studies scholar Professor Matt Hills.
