With clear instructions for developing a research design and complementary research tools, this book is not about describing or theorizing qualitative methods, but how researchers actually create and execute these methods. Helping students conquer the practical issues many novice researchers face, the book provides them with the tools they need to answer critical questions such as: what are some ways to sample potential participants? how do I construct an interview schedule? should I be thinking of a single case study or a comparative study? what and how should I record in the field? what other sources of data should I consider?

Humanity has nearly destroyed its world through global warming, but now an even greater evil lurks. The indigenous people of North America are being hunted and harvested for their bone marrow, which carries the key to recovering something the rest of the population has lost: the ability to dream. In this dark world, Frenchie and his companions struggle to survive as they make their way up north to the old lands. For now, survival means staying hidden-but what they don't know is that one of them holds the secret to defeating the marrow thieves. "Miigwans is a true hero; in him Dimaline creates a character of tremendous emotional depth and tenderness, connecting readers with the complexity and compassion of Indigenous people. A little more than seventy-five years ago, Kate L. Turabian drafted a set of guidelines to help students understand how to write, cite, and formally submit research writing. Seven editions and more than nine million copies later, the name Turabian has become synonymous with best practices in research writing and style. Her *Manual for Writers* continues to be the gold standard for generations of college and graduate students in virtually all academic disciplines.

Now in its eighth edition, *A Manual for Writers of Research Papers, Theses, and Dissertations* has been fully revised to meet the needs of today's writers and researchers. The Manual retains its familiar three-part structure, beginning with an overview of the steps in the research and writing process, including formulating questions, reading critically, building arguments, and revising drafts. Part II provides an overview of citation practices with detailed information on the two main scholarly citation styles (notes-bibliography and author-date), an array of source types with contemporary examples, and detailed guidance on citing online resources. The final section treats all matters of editorial style, with
