The most thorough treatment of its subject available, this book introduces and analyses the international tax issues relating to international manufacturing and distribution activities, extending from the tax regime in the country where the manufacturing activities are located, through to regional purchase and sales companies, to the taxation of local country sales companies. The analysis includes the domestic tax laws relating to manufacturing and distribution company profits as well as international tax issues relating to income flows and the payment of dividends. Among the topics and issues analysed in depth are the following: – foreign tax credits; – taxation in the digital economy; – tax incentives; – intellectual property; – group treasury companies; – mergers and acquisitions; – leasing; – derivatives; – controlled foreign corporation provisions; – VAT and customs tariffs; – free trade agreements and customs unions; – transfer pricing; – role of tax treaties; – hedging; – related accounting issues; – deferred

tax assets and liabilities; – tax risk management; – supply chain management; – depreciation allowances; and – carry-forward tax losses. The book includes descriptions of 21 country tax systems and ten detailed case studies applying the analysis to specific examples. Detailed up-to-date attention is paid to the OECD Action Plan on Base Erosion and Profit Shifting (BEPS) and other measures against tax avoidance. As a full-scale commentary and analysis of international taxation issues for multinational manufacturing groups – including in-depth consideration of corporate structures, tax treaties, transfer pricing, and current developments – this book is without peer. It will prove of inestimable value to all accountants, lawyers, economists, financial managers, and government officials working in international trade environments.

The emergence of convertible decentralized virtual currency schemes confronts tax authorities with unprecedented questions, among them are the status of virtual currency for tax purposes, which virtual transactions may benefit from a VAT exemption and determining the most optimal method of tax regulation. This first book-length treatment of this major current topic provides an in-depth and comprehensive analysis of the tax implications of virtual currency transactions. Seeking to ascertain whether virtual currency requires additional regulation or whether the law as it stands is adequate to administer its usage, the analysis not only thoroughly explains the nature of the underlying blockchain technology and its regulatory and judicial treatment so far but also identifies best practices for virtual currency transactions and makes recommendations.

for the improvement of the existing tax systems. Among the aspects of the phenomenon covered are the following: – particular aspects of virtual currency use such as smart contracts and initial coin offerings; – comparative review of income tax consequences of virtual currency transactions in Germany, the Netherlands, the United Kingdom and the United States; – VAT/sales tax treatment of transactions involving virtual currency in the European Union and the United States; – methodology for creating an effective regulatory framework for the tax of virtual currency; and – the future of blockchain. The book has three parts and an annex that describes tax regulations, administrative rulings and court decisions concerning virtual currency in twenty countries. In its in-depth analysis of tax implications of virtual currency transactions in major economies, detailed overview of recent tax developments that affect virtual currency transactions and evaluation of tax policies related to virtual currencies, this book has no peers. Especially in view of the OECD's examination of the tax challenges presented by the digital economy as part of its base erosion and profit shifting (BEPS) project, this clear and comprehensive explanation of the functioning of virtual currency and blockchain technology will be welcomed by tax administration officials and by persons mining and transacting in virtual currencies needing to know their compliance obligations.
