This volume examines many of the complex issues regarding the language skills and professional competencies acquired by students studying Modern Foreign Languages (MFL) at universities in the United Kingdom and across Europe. It also outlines the innovative pedagogical strategies, methods, and resources employed by language academics to help graduates transition from university into the world of work through their MFL studies. These issues were discussed at the Professional Competencies in Language Learning and Teaching conference that took place on 12th-13th July 2018 at the University of Nottingham. The conference that was organised as a collaboration between the Department of Modern Languages and Cultures and the Confucius Institute of the University of Nottingham brought together researchers, practitioners, employers, and experts working on 21st century professional competencies and language education.

Framed by the theoretical work of Gloria Anzaldúa, this volume focuses on the cultural and linguistic practices of Mexican-origin youth at the U.S. border to explore how young people engage in acts of "bridging" to develop rich, transnational identities. Using a wealth of empirical data gathered through interviews and observations, and featuring perspectives from multinational and transnational authors, this text highlights how youth resist racialized and raciolinguistic oppression in both formal and informal contexts by purposefully engaging with their heritage culture and language. In doing so, they defy deficit narratives and negotiate identities in the "in-between." As a whole, the volume engages issues of identity, language, and education, and offers a uniquely asset-based perspective on the complexities of transnational youth identity, demonstrating its value in educational and academic spaces in particular. This text will benefit researchers, academics, and educators with an interest in the sociology of education, multicultural education, and youth culture more broadly. Those interested in language and identity studies, as well as adolescence, schooling, and bilingualism, will also benefit from this volume.

Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. Understanding Second Language Acquisition offers a wide-encompassing survey of this burgeoning field, its accumulated findings and proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics, developmental psycholinguistics, psychology, and cognitive science. Supporting resources for tutors are available free at www.routledge.com/ortega.

This twenty-third ICMI Study addresses for the first time mathematics teaching and learning in the primary school (and pre-school) setting, while also taking international perspectives, socio-cultural diversity and institutional constraints into account. One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level. Accordingly, a focus area that is central to the discussion was chosen, together with a number of related questions. The broad area of Whole Number Arithmetic (WNA), including operations and relations and arithmetic word problems, forms the core content of all primary mathematics curricula. The study of this core content area is often regarded as foundational for later mathematics learning. However, the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon, and practice varies substantially from country to country. As such, this study presents a meta-level analysis and synthesis of what is currently known about WNA, providing a useful base from which to gauge gaps and shortcomings, as well as an opportunity to learn from the practices of different countries and contexts.
