Explore the power of the underdog in Malcolm Gladwell's dazzling examination of success, motivation, and the role of adversity in shaping our lives, from the bestselling author of The Bomber Mafia. Three thousand years ago on a battlefield in ancient Palestine, a shepherd boy felled a mighty warrior with nothing more than a stone and a sling, and ever since then the names of David and Goliath have stood for battles between underdogs and giants. David's victory was improbable and miraculous. He shouldn't have won. Or should he have? In David and Goliath, Malcolm Gladwell challenges how we think about obstacles and disadvantages, offering a new interpretation of what it means to be discriminated against, or cope with a disability, or lose a parent, or attend a mediocre school, or suffer from any number of other apparent setbacks. Gladwell begins with the real story of what happened between the giant and the shepherd boy those many years ago. From there, David and Goliath examines Northern Ireland's Troubles, the minds of cancer researchers and civil rights leaders, murder and the high costs of revenge, and the dynamics of successful and unsuccessful classrooms—all to demonstrate how much of what is beautiful and important in the world arises from what looks like suffering and adversity. In the tradition of Gladwell's previous bestsellers—The Tipping Point, Blink, Outliers and What the Dog Saw—David and Goliath draws upon history, psychology, and powerful storytelling to reshape the way we think of the world around us.

One of the world's most esteemed and influential psychologists, Roy F. Baumeister, teams with New York Times science writer John Tierney to reveal the secrets of self-control and how to master it. "Deep and provocative analysis of people's battle with temptation and masterful insights into understanding willpower: why we have it, why we don't, and how to build it. A terrific read." —Ravi Dhar, Yale School of Management, Director of Center for Customer Insights Pioneering research psychologist Roy F. Baumeister collaborates with New York Times science writer John Tierney to revolutionize our understanding of the most coveted human virtue: self-control. Drawing on cutting-edge research and the wisdom of real-life experts, Willpower shares lessons on how to focus our strength, resist temptation, and redirect our lives. It shows readers how to be realistic when setting goals, monitor their progress, and how to keep faith when they falter. By blending practical wisdom with the best of recent research science, Willpower makes it clear that whatever we seek—from happiness

to good health to financial security—we won't reach our goals without first learning to harness self-control.

Judah Smith, New York Times bestselling author of Jesus Is \_\_\_\_\_ helps readers understand what steals their peace of mind and outlines the path to peace and fulfillment: understanding and implementing the healthy soul environment God originally designed. Modern everyday life is stressful and confusing, full of overly packed schedules and circumstances outside one's control. This can be especially troubling for Christians who are wrestling with reality while trying to put their trust in God. But the truth is, anxiety does not have to be the constant from day to day. In fact, all the things people most desire in life—peace of mind, hope for tomorrow—are rooted in one simple thing: how they care for the health of their souls. In How's Your Soul? Judah Smith explores the various facets and needs of the inner person, demonstrating that the path to cultivating healthy souls starts with discovering God's original design. He helps readers find real peace and security by bringing their feelings into alignment with God's truth, discover a healthy sense of identity from God and feel empowered to face the future with a new security and confidence, and learn the four elements necessary for a healthy soul environment. Sharing his own often humorous mistakes and foibles, Judah offers a helping hand as readers find their way through the emotional rollercoasters of life to discover the soul-healing essentials rooted in what he calls the soul's only true home—God himself.

Some extraordinary rats come to the aid of a mouse family in this Newbery Medal Award-winning classic by notable children's author Robert C. O'Brien. Mrs. Frisby, a widowed mouse with four small children, is faced with a terrible problem. She must move her family to their summer quarters immediately, or face almost certain death. But her youngest son, Timothy, lies ill with pneumonia and must not be moved. Fortunately, she encounters the rats of NIMH, an extraordinary breed of highly intelligent creatures, who come up with a brilliant solution to her dilemma. And Mrs. Frisby in turn renders them a great service.

Summary of Blink

Complications

**Christians need a view of life that is realistic enough to deal with its downside and big enough to include all its joys. This book provides both.**

**What is the price of progress? In this tale of innovation and obsession Gladwell revisits one of the bloodiest attacks of the Second World War to show what happens when technological inventions slip out of our control. Weaving together the stories of a group of renegade pilots, the ruthless bomber commander of the US Air Force, a reclusive Dutch genius and his homemade computer, a team of pyromanical chemists at Harvard and Winston Churchill's forbidding best friend, The Bomber Mafia invites us to rethink the moral certainties, good intentions and unforeseen consequences that so often accompany shiny new inventions.**

**A smart, hilarious parody of Malcolm Gladwell's bestselling Blink. Stop! Don't think! You already know what this book is about. That is the power of Blank: the power of not actually thinking at all. Using what scientific researchers call 'Extra-Lean Deli Slicing' (or would, if they actually bothered to research it), your brain has already decided whether you're going to like Blank, whether its cover goes with your shirt, and whether it will make you look smart if somebody sees you reading it on the train. Chances are you and your shirt are both liking it a lot, you're going to buy several copies, and you don't even know why! That's why you've absolutely got to read Blank: to find out why your brain keeps doing these wacky things without your permission. In Blank, a hilarious parody of the No. 1 bestseller it looks eerily like (and sort of rhymes with) and that your brain wisely advised you to just read a review or magazine excerpt about while avoiding the actual book itself, the brilliantly impulsive and slightly irresponsible Noah Tall explains how people as diverse as General Custer, Roy Rogers, a semi-famous rock star, and the entire New York City Police Department either won big or lost miserably as a result of their minds going completely blank.**

**One of the greatest gifts we can give to ourselves is rethinking what we've been taught, because thoughts become behaviors. The same mind that gets us stuck is the same one that can set us free. It's time to rip up the script society hands us, breathe deep, and reclaim a healthy definition of success that doesn't compartmentalize your mind, body and soul. We need a new organizing framework that allows more flexibility and moral grounding—one that lets science, emotion and spirit to fuse. Too often, life's disorienting moments can leave us tumbling into messy, downward spirals. We lose clarity, and are held hostage by blind spots that keep us from thriving. We fall into common mindless behavioral traps which lead to perpetual patterns of shutting down, numbing out, binding up and staying stuck. In this uniquely liberating book, Dr. Kristen Lee teaches us how to apply a process of behavioral change using a series of different lenses, to steer our brains to overcome blind spots and cultivate Upward Spiral habits. A leading expert on resilience and behavioral science, Dr. Kristen Lee developed this new psychology of thinking model from over twenty years of clinical practice, the latest neuroscience, and her own research findings. Mentalligence [men-tel-i-juh-nſ] is a sage guide that will help you build meta-awareness by emphasizing an impact-driven rather than a performance-obsessed mindset, and adopt a model of 'collective efficacy' that is less I-focused and more we-focused, to facilitate positive social impact at a time when it's desperately needed. This is what psychologists call 'The Good Life'—living mindfully and consciously. Rather than falling for predominant definitions of 'success' that leave us boxed in, deleted, and oblivious to ways we can work together, Mentalligence helps us find the thinking and behavioral agility to work towards better outcomes for all.**

*Blenders, liquidizers and juicers are the obvious choice when you need to make a smoothie, but they also hold untapped potential for delicious cakes, batters, dips and soups. Few people realise it, but simple, nutritious bakes, puddings and sauces can be made just as effortlessly as more traditional smoothies and juices. In Blitz, Juliet Baptiste-Kelly explains how to get more from your blender or liquidiser. Simply throw a few choice ingredients into the cup of the blender and give it a good blast to yield the fluffiest pancakes, tastiest pestos and even a cheeky hard milkshake! Ideas range from downright decadent chocolate fondants to gluten-free, nutrient-packed spinach blinis. The recipes are concise, accessible and easily adaptable with simple suggestions for variations according to personal taste. Make the most of your blender and blitz your way through this imaginative cookbook.*

*Technology is developing rapidly. It is an essential part of how we live our daily lives – in a mental and physical sense, and in professional and personal environments. Cybercognition explores the ideas of technology addiction, brain training and much more, and will provide students with a guide to understanding concepts related to the online world. It answers important questions: What is the impact of digital technology on our learning, memory, attention, problem-solving and decision making? If we continue to use digital technology on a large scale, can it change the way we think? Can human cognition keep up with technology? Suitable for students on Cyberpsychology and Cognitive Psychology courses at all levels, as well as anyone with an inquiring mind.*

*Blink by Malcolm Gladwell: Book Summary IMPORTANT NOTE: This is a book summary of Blink by Malcolm Gladwell – this is NOT the original book. ORIGINAL BOOK DESCRIPTION: Blink: The Power of Thinking Without Thinking by Malcolm Gladwell In his landmark bestseller The Tipping Point, Malcolm Gladwell redefined how we understand the world around us. Now, in Blink, he revolutionizes the way we understand the world within. Blink is a book about how we think without thinking, about choices that seem to be made in an instant–in the blink of an eye–that actually aren't as simple as they seem. Why are some people brilliant decision makers, while others are consistently inept? Why do some people follow their instincts and win, while others end up stumbling into error? How do our brains really work–in the office, in the classroom, in the kitchen, and in the bedroom? And why are the best decisions often those that are impossible to explain to others?In Blink we meet the psychologist who has learned to predict whether a marriage will last, based on a few minutes of observing a couple; the tennis coach who knows when a player will double-fault before the racket even makes contact with the ball; the antiquities experts who recognize a fake at a glance. Here, too, are great failures of "blink": the election of Warren Harding; "New Coke"; and the shooting of Amadou Diallo by police. Blink reveals that great decision makers aren't those who process the most information or spend the most time deliberating, but those who have perfected the art of "thin-slicing"—filtering the very few factors that matter from an overwhelming number of variables. \*\*\*\* Executive book summary of Blink by Malcolm Gladwell - Book Summary by Dean's Library*

*This isn't the time to Blink. It's time to THINK! - before it's too late. Outraged by the downward spiral of American intellect and culture, Michael R. LeGault offers the flip side of Malcolm Gladwell's bestselling phenomenon, Blink, which theorized that our best decision-making is done on impulse, without factual knowledge or critical analysis. If bestselling books are advising us to not think, LeGault argues, it comes as no surprise that sharp, incisive reasoning has become a lost art in the daily life of Americans. Somewhere along the line, the Age of Reason morphed into the Age of Emotion; this systemic erosion is costing time, money, jobs, and lives in the twenty-first century, leading to less fulfillment and growing dysfunction. LeGault provides a bold, controversial, and objective analysis of the causes and solutions for: • the erosion of growth and market share at many established American companies, big and small, which appear to have less chance of achieving the dynamic gratification of the past • permissive parenting and low standards that have caused an academic crisis among our children -• body weights rise while grades plummet • America's growing political polarization, which is a result of our reluctance to think outside our comfort zone • faulty planning and failure to act on information at all levels that has led to preventable disasters, such as the Hurricane Katrina meltdown • a culture of image and instant gratification, fed by reality shows and computer games, that has rendered curiosity of the mind and spirit all but obsolete • stress, overuse of taking risks, and therapy that are replacing the traditional American "can do" mind-set. Far from perpetuating the stereotype of the complacent American, LeGault's no-holds-barred analysis asks more of us than any other societal overview: America can fulfill its greatest potential starting today, and we need smart teachers, smart health care workers, smart sales representatives, smart students, smart mechanics, and smart leaders to make it happen. Now is the time to THINK! - because a mind truly is a terrible thing to waste.*

Malcolm Gladwell asks the questions you never even thought to ask (and will change the way you think) about everything from criminal profiling to ketchup.

Malcolm Gladwell, host of the podcast Revisionist History and author of the #1 New York Times bestseller Outliers, offers a powerful examination of our interactions with strangers and why they often go wrong—with a new afterword by the author. A Best Book of the Year: The Financial Times, Bloomberg, Chicago

Tribune, and Detroit Free Press How did Fidel Castro fool the CIA for a generation? Why did Neville Chamberlain think he could trust Adolf Hitler? Why are campus sexual assaults on the rise? Do television sitcoms teach us something about the way we relate to one another that isn't true? Talking to Strangers is a classically Gladwellian intellectual adventure, a challenging and controversial excursion through history, psychology, and scandals taken straight from the news. He revisits the deceptions of Bernie Madoff, the trial of Amanda Knox, the suicide of Sylvia Plath, the Jerry Sandusky pedophilia scandal at Penn State University, and the death of Sandra Bland—throwing our understanding of these and other stories into doubt. Something is very wrong, Gladwell argues, with the tools and strategies we use to make sense of people we don't know. And because we don't know how to talk to strangers, we are inviting conflict and misunderstanding in ways that have a profound effect on our lives and our world. In his first book since his #1 bestseller David and Goliath, Malcolm Gladwell has written a gripping guidebook for troubled times.

The modern church suffers from a serious identity crisis. Many Christians don't know who they really are in Christ. Churches languish in the land of lack. Listless, powerless and with little influence in the world. This is about to change! God is birthing a new thing in the church. He is calling all believers to embrace the anointing of the Holy Spirit and walk in His divine power to change the world. The harvest is plentiful and the coming end-time revival needs a vibrant, anointed church that is ready to receive that anointing. God doesn't use just superstars : He longs to anoint ordinary people to do extraordinary things. He

longs to anoint you. If not you, who? If not now, when? Now is the time!

The very things that we do control anxiety can make anxiety worse. This unique guide offers a cognitive behavioral therapy (CBT)-based approach to help you recognize the constant chatter of your anxious [monkey mind]! stop feeding anxious thoughts, and find the personal peace you crave. Ancient sages compared the human mind to a monkey: constantly chattering, hopping from branch to branchlessly moving from fear to safety. If you are one of the millions of people whose life is affected by anxiety, you are familiar with this process. Unfortunately, you can't switch off the [monkey mind]! but you can stop feeding the monkey!or stop rewarding it by avoiding the things you fear. Written by psychotherapist Jennifer Shannon, this book shows you how to stop anxious thoughts from taking over using proven-effective cognitive behavioral therapy (CBT), acceptance and commitment therapy (ACT), and mindfulness techniques, as well as fun illustrations. By following the exercises in this book, you'll learn to identify your own anxious thoughts, question those thoughts, and uncover the core fears at play. Once you stop feeding the monkey, there are no limits to how expansive your life can feel. This book will show you how anxiety can only continue as long as you try to avoid it. And, paradoxically, only by seeking out and confronting the things that make you anxious can you reverse the cycle that keeps your fears alive.

From the Sunday Times bestselling author of The Man Who Couldn't Stop, 'Witty, sharp and enlightening... This book will make you smarter' Adam Rutherford. What if you have more intelligence than you realize? What if there is a genius inside you, just waiting to be released? And what if the route to better brain power is not hard work or thousands of hours of practice but to simply swallow a pill? In The Genius Within, bestselling author David Adam explores the ground-breaking neuroscience of cognitive enhancement that is changing the way the brain and the mind works ! to make it better, sharper, more focused and, yes, more intelligent. Sharing his own experiments with revolutionary smart drugs and electrical brain stimulation, he delves into the sinister history of intelligence tests, meets savants and brain hackers and reveals how he boosted his own IQ to cheat his way into Mensa. Going to the heart of how we consider, measure and judge mental ability, The Genius Within asks difficult questions about the science that could rank and define us, and inevitably shape our future.

Having reported on some of the world's most violent, least understood regions in his bestsellers Balkan Ghosts and The Ends of the Earth, Robert Kaplan now returns to his native land, the United States of America. Traveling, like Tocqueville and John Gunther before him, through a political and cultural landscape in transition, Kaplan reveals a nation shedding a familiar identity as it assumes a radically new one. An Empire Wilderness opens in Fort Leavenworth, Kansas, where the first white settlers moved into Indian country and where Manifest Destiny was born. In a world whose future conflicts can barely be imagined, it is also the place where the army trains its men to fight the next war. "A nostalgic view of the United States is deliberately cultivated here," Kaplan writes, "as if to bind the uncertain future to a reliable past." From Fort Leavenworth, Kaplan travels west to the great cities of the heartland—to St. Louis, once a glorious shipping center expected to outshine imperial Rome and now touted, with its desolate inner city and miles of suburban gated communities, as "the most average American city." Kaplan continues west to Omaha; down through California; north from Mexico, across Arizona, New Mexico, and Texas; up to Montana and Canada, and back through Oregon. He visits Mexican border settlements and dust-blon town sheriff's offices, Indian reservations and nuclear bomb plants, cattle ranches in the Oklahoma Panhandle, glacier-mantled forests in the Pacific Northwest, swanky postsuburban suburbs and grim bus terminals, and comes, at last, to the great battlefield at Vicksburg, Mississippi, where an earlier generation of Americans gave their lives for their vision of an American future. But what, if anything, he asks, will today's Americans fight and die for? At Vicksburg, Kaplan contemplates the new America through which he has just traveled—an America of sharply polarized communities that draws its population from pools of talent far beyond its borders; an America where the distance between winners and losers grows exponentially as corporations assume gov-ernment functions and the wealthy find themselves more closely linked to their business associates in India and China than to their poorer neighbors a few miles away; an America where old loyalties and allegiances are vanishing and new ones are only beginning to emerge. The new America he found in is the pages of this book. Kaplan gives a precise and chilling vision of how the most successful nation the world has ever known is entering the final, and highly uncertain, phase of its history.

**A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect with incapacitating back pain for which there is no physical cause; a young woman with nausea that won't go away; a television newscaster whose blushing is so severe that she cannot do her job. Gawande offers a richly detailed portrait of the people and the science, even as he tackles the paradoxes and imperfections inherent in caring for human lives. At once tough-minded and humane, Complications is a new kind of medical writing, nuanced and lucid, unafraid to confront the conflicts and uncertainties that lie at the heart of modern medicine, yet always alive to the possibilities of wisdom in this extraordinary endeavor. Complications is a 2002 National Book Award Finalist for Nonfiction.**

The chilling Saga of Darren Shan, the ordinary schoolboy plunged into the vampire world.

How we work, the way we live, even how long we live are changing at such a breathtaking pace that only those who can embrace everything that's going on and reinvent themselves will survive and thrive. Yet change - even good change - is tough. Most of us feel utterly powerless when confronted by it, but we're not. Learn to harness challenging situations and see the new opportunities with The Power to Change. The Power to Change does more than simply enable you just to cope with change - it gives you the tools and approaches to embrace and celebrate change. Written by award-winning author, Campbell Macpherson, this book provides a genuinely unique approach to celebrating change that will resonate with readers, no matter what sort of change they have to confront. The Power to Change gives readers the permission to feel emotional and have doubts and fears about change. It provides a range of techniques to put change into perspective, and allows readers to embrace and prosper from the challenges it presents.

Divorce rates are at an all-time high. But without a theoretical understanding of the processes related to marital stability and dissolution, it is difficult to design and evaluate new marriage interventions. The Mathematics of Marriage provides the foundation for a scientific theory of marital relations. The book does not rely on metaphors, but develops and applies a mathematical model using difference equations. The work is the fulfillment of the goal to build a mathematical framework for the general system theory of families first suggested by Ludwig Von Bertalanffy in the 1960s. The book also presents a complete introduction to the mathematics involved in theory building and testing, and details the development of experiments and models. In one "marriage experiment," for example, the authors explored the effects of lowering or raising a couple's heart rates. Armed with their mathematical model, they were able to do real experiments to determine which processes were affected by their interventions. Applying ideas such as phase space, null clines, influence functions, inertia, and uninfluenced and influenced stable steady states (attractors), the authors show how other researchers can use the methods to weigh their own data with positive and negative weights. While the focus is on modeling marriage, the techniques can be applied to other types of psychological phenomena as well.

**Success is measured not by the size of your brain, but rather by the size of your thinking. This intrigues a lot of people, and if you observe how people behave, you will have a clear understanding of what success really means. Time and time again, history and experience have proved that the degree of our general satisfaction and happiness is dependent on how we think. There is magic in thinking big! Positive thinking helps accomplish so much in our life, but unfortunately not everyone thinks that way. We are all products of our thinking that goes within and around us. There is an environment around us that shapes our thinking; some will push you up the ladder while others will pull you down. We have been told many times that opportunities to lead are no longer there; hence we should be content with who we are without having positive aspirations on leadership. The petty environment surrounding us also has its own narrative concerning our lives. It constantly tells us that whatever is destined will eventually happen and we have no control over it. Leaving your fate in the hands of chance can potentially ruin your life and make you miserable. Therefore, before you start giving up your dreams of a finer home or giving a better life for your children, stand firm and resist resigning to fate. Do not lie down and wait to die. Success is worth every effort you expend, and every step you make pays a dividend. Even in an environment where competition is intense, you still can succeed as long as your thinking is in the positive quadrant of your mind frame. The basic concepts and principles that underlie the power of thinking big are drawn from the highest-pedigree sources and the finest thinking minds such as Emerson who said "Great men are those who see that thoughts rule the world." Milton who wrote in his book Paradise Lost, "The mind is its own place and in itself can make a heaven of hell or a hell of heaven." Shakespeare made an interesting observation about thinking which he summarized and said "There is nothing either good or bad except that thinking makes it so." Proof is everywhere that thinking big indeed works. When you look at the lives of people who you consider as big thinkers, you will be amazed at their winning success, happiness and achievements. This book will show you proven strategies from different life situations that will turn your life around.**

**Choice explores how technology and best intentions collide in the heat of war. In The Bomber Mafia, Malcolm Gladwell weaves together the stories of a Dutch genius and his homemade computer, a band of brothers in central Alabama, a British psychopath, and pyromanical chemists at Harvard to examine one of the greatest moral challenges in modern American history. Most military thinkers in the years leading up to World War II saw the airplane as an afterthought. But a small band of idealistic strategists, the "Bomber Mafia," asked: What if precision bombing could cripple the enemy and make war far less lethal? In contrast, the bombing of Tokyo on the deadliest night of the war was the brainchild of General Curtis LeMay, whose brutal pragmatism and scorched-earth tactics in Japan cost thousands of civilian lives, but may have spared even more by averting a planned US invasion. In The Bomber Mafia, Gladwell asks, "Was it worth it?" Things might have gone differently had LeMay's predecessor, General Haywood Hansell, remained in charge. Hansell believed in precision bombing, but when he and Curtis LeMay squared off for a leadership handover in the jungles of Guam, LeMay emerged victorious, leading to the darkest night of World War II. The Bomber Mafia is a riveting tale of persistence, innovation, and the incalculable wages of war.**

Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big ideas, and shaped the way we think.

The unconscious has had a long and chequered history. For at least the last 4,000 years, societies have concocted comforting fables in the face of the recurrent puzzles of human existence - death, dreaming, madness, possession, Freudian - that invariably rely on some notion of the unconscious. Supernatural 'fairy stories' need some internal proxy or contact point through which the influence of demons and spirits can flow. And without such gods and forces, some psychological machinery is needed to take over their work. But what IS the unconscious? Is it God's viceroy, the soul? Is it the locked ward of Freudian desire? Is the subliminal mind the source of the sublime emotions of the Romantics? Is it the mental microchip of cognitive science? Or is it simply the brain?

Johnny Hiro, a hardworking busboy, lives in Brooklyn with his flighty but lovable girlfriend Maimy. Every day, he struggles to make ends meet while fighting giant monsters, running over rooftops from crazed warriors, fending off businessmen-turned-samurai, or having the occasional conversation with Judge Judy, Coolio, or Alton Brown. With Fred Chao's signature style and laugh-out-loud humor, Johnny Hiro presents the quirky trials and misadventures of a modern-day hero trying to find his slice of the good life. This delightfully absurd romp through the trials and chores of living in New York was nominated for four Eisner Awards, including for best new series, and for the Russ Manning Award. It was selected for the anthology Best American Comics 2010.

The future changes in the blink of an eye . . . or does it? Miriam is a Saudi princess promised to another, a pawn in a political struggle that could shift the balance of power in the Middle East. Seth is a certified genius with a head full of numbers, a life full of baggage, and an attitude born on the waves of the Pacific. Cultures collide when they find themselves thrown together as fugitives in a high-stakes chase across Southern California. A growing attraction and a search for answers fuel their fight to survive . . . but with no sleep and a massive manhunt steadily closing in, their chances of surviving any future are razor thin.

*Using examples from his long career, a legendary basketball coach outlines the benefits of negative thinking, which helps build a realistic strategy that takes all potential obstacles into account.*

*Wall Street Journal bestseller! Poker champion turned business consultant Annie Duke teaches you how to get comfortable with uncertainty and make better decisions as a result. In Super Bowl XLIX, Seahawks coach Pete Carroll made one of the most controversial calls in football history: With 26 seconds remaining, and trailing by four at the Patriots' one-yard line, he called for a pass instead of a hand off to his star running back. The pass was intercepted and the Seahawks lost. Critics called it the dumbest play in history. But was the call really that bad? Or did Carroll actually make a great move that was rewarded by bad luck? Even the best decision doesn't yield the best outcome every time. There's always an element of luck that you can't control, and there is always information that is hidden from*

view. So the key to long-term success (and avoiding worrying yourself to death) is to think in bets: How sure am I? What are the possible ways things could turn out? What decision has the highest odds of success? Did I land in the unlucky 10% on the strategy that works 90% of the time? Or is my success attributable to dumb luck rather than great decision making? Annie Duke, a former World Series of Poker champion turned business consultant, draws on examples from business, sports, politics, and (of course) poker to share tools anyone can use to embrace uncertainty and make better decisions. For most people, it's difficult to say "I'm not sure" in a world that values and, even, rewards the appearance of certainty. But professional poker players are comfortable with the fact that great decisions don't always lead to great outcomes and bad decisions don't always lead to bad outcomes. By shifting your thinking from a need for certainty to a goal of accurately assessing what you know and what you don't, you'll be less vulnerable to reactive emotions, knee-jerk biases, and destructive habits in your decision making. You'll become more confident, calm, compassionate and successful in the long run.

On average, a physician will interrupt a patient describing her symptoms within eighteen seconds. In that short time, many doctors decide on the likely diagnosis and best treatment. Often, decisions made this way are correct, but at crucial moments they can also be wrong—with catastrophic consequences. In this myth-shattering book, Jerome Groopman pinpoints the forces and thought processes behind the decisions doctors make. Groopman explores why doctors err and shows when and how they can—with our help—avoid snap judgments, embrace uncertainty, communicate effectively, and deploy other skills that can profoundly impact our health. This book is the first to describe in detail the warning signs of erroneous medical thinking and reveal how new technologies may actually hinder accurate diagnoses. How Doctors Think offers direct, intelligent questions patients can ask their doctors to help them get back on track. Groopman draws on a wealth of research, extensive interviews with some of the country's best doctors, and his own experiences as a doctor and as a patient. He has learned many of the lessons in this book the hard way, from his own mistakes and from errors his doctors made in treating his own debilitating medical problems. How Doctors Think reveals a profound new view of twenty-first-century medical practice, giving doctors and patients the vital information they need to make better judgments together.

One of the First Books to Demonstrate the Power of Positive Thoughts Fresh with contemporary relevance, this classic of positive thinking from one of the world's greatest motivational writers offers stirring insights on self-transformation. Based on Emmet Fox's simple message that "thoughts are things" and all potential rests in their creative and constructive use, these thirty-one inspiring essays show how to have it all—health, success, happiness, and a liberated spirit—through the power of constructive thought. First published in 1940, Power Through Constructive Thinking has been a never-failing source of strength and renewal for generations of readers.

Progress. It is one of the animating concepts of the modern era. From the Enlightenment onwards, the West has had an enduring belief that through the evolution of institutions, innovations, and ideas, the human condition is improving. This process is supposedly accelerating as new technologies, individual freedoms, and the spread of global norms empower individuals and societies around the world. But is progress inevitable? Its critics argue that human civilization has become different, not better, over the last two and a half centuries. What is seen as a breakthrough or innovation in one period becomes a setback or limitation in another. In short, progress is an ideology not a fact; a way of thinking about the world as opposed to a description of reality. In the seventeenth semi-annual Munk Debates, which was held in Toronto on November 6, 2015, pioneering cognitive scientist Steven Pinker and bestselling author Matt Ridley squared off against noted philosopher Alain de Botton and bestselling author Malcolm Gladwell to debate whether humankind's best days lie ahead.

Think less – and know more. A sportsman can catch a ball without calculating its speed or distance. A group of amateurs beat the experts at playing the stock market. A man falls for the right woman even though she's 'wrong' on paper. All these people succeeded by trusting their instincts – but how does it work? In Gut Feelings psychologist and behavioural expert Gerd Gigerenzer reveals the secrets of fast and effective decision-making. He explains that, in an uncertain world, sometimes we have to ignore too much information and rely on our brain's 'short cut', or heuristic. By explaining how intuition works and analyzing the techniques that people use to make good decisions – whether it's in personnel selection or heart surgery – Gigerenzer will show you why gut thinking can change your world.
