The communication demands expected of today's engineers and information technology professionals immersed in multicultural global enterprises are unsurpassed. New Media Communication Skills for Engineers and IT Professionals: Trans-National and Trans-Cultural Demands provides new and experienced practitioners, academics, employers, researchers, and students with international examples of best practices in new, as well as traditional, communication skills in increasingly trans-cultural, digitalized, hypertext environments. This book will be a valuable addition to the existing literature and resources in communication skills in both organizational and higher educational settings, giving readers comprehensive insights into the proficient use of a broad range of communication critical for effective professional participation in the globalized and digitized communication environments that characterize current engineering and IT workplaces.

How can history be taught effectively? Does knowing about the past give meaning to the present and hints to what will happen in the future? This book responds to these questions as it explores the key elements of history instruction—the use of primary sources and narratives, involving students in the historical inquiry through classroom discussions,

teaching toward chronological thinking, and the use of historical documents to develop in students a “detective approach” to solving historical problems. Taking a systematic approach to improve students' historical thinking, this book emphasizes certain strategies that will help students know more about the past in ways that will help them in their lives today. The second edition is organized in three parts—Part One describes the theoretical background to teaching history. Part Two, Planning and Assessment, emphasizes the importance of good organization and lesson planning as well as how to assess students' knowledge, reasoning power, and effective use of communication in the history classroom. Part Three, Instruction, focuses on the use of primary sources, class discussions, incorporating photographs and paintings, and writing in teaching history. Both the study of history and the teaching of history are multifaceted. The author's hope in writing this book is to engage new and experienced teachers in thoughtful discourse regarding the teaching and learning of history and to develop lifelong learners of history in the 21st century.

The Handbook of Communication Skills is recognised as one of the core texts in the field of communication, offering a state-of-the-art overview of this rapidly evolving field of study. This comprehensively revised and updated fourth edition arrives at a time when the realm of interpersonal communication has attracted immense attention. Recent research showing the potency of communication skills for success in many walks of life has stimulated considerable interest in this area, both from academic researchers, and from practitioners whose day-to-day work is so dependent on effective social skills. Covering topics such as non-verbal behaviour, listening, negotiation and persuasion, the book situates communication in a range of different contexts, from interacting in groups to the counselling interview. Based on the core tenet that interpersonal communication can be conceptualised as a form of skilled activity, and including new chapters on cognitive behavioural therapy and coaching and mentoring, this new edition also places communication in context with advances in digital technology. The Handbook of Communication Skills represents the most significant single contribution to the literature in this domain. Providing a rich mine of information for

the neophyte and practising professional, it is perfect for use in a variety of contexts, from theoretical mainstream communication modules on degree programmes to vocational courses in health, business and education. With contributions from an internationally renowned range of scholars, this is the definitive text for students, researchers and professionals alike.
