The only way to stop a hacker is to think like one! ColdFusion is a Web application development tool that allows programmers to quickly build robust applications using server-side markup language. It is incredibly popular and has both an established user base and a quickly growing number of new adoptions. It has become the development environment of choice for e-commerce sites and content sites where databases and transactions are the most vulnerable and where security is of the utmost importance. Several security concerns exist for ColdFusion due to its unique approach of designing pages using dynamic-page templates rather than static HTML documents. Because ColdFusion does not

require that developers have expertise in Visual Basic, Java and C++; Web applications created using ColdFusion Markup language are vulnerable to a variety of security breaches. Hack Proofing ColdFusion 5.0 is the seventh edition in the popular Hack Proofing series and provides developers with step-by-step instructions for developing secure web applications. Teaches strategy and techniques: Using forensics-based analysis this book gives the reader insight to the mind of a hacker Interest in topic continues to grow: Network architects, engineers and administrators are scrambling for security books to help them protect their new networks and applications powered by ColdFusion Unrivalled Web-based support: Up-to-the minute links, white papers and analysis for two years at solutions@syngress.com

Google is making a fortune on what it knows about you...and you may be shocked by just how much Google does know. Googling Security is the first book to reveal how Google's vast information stockpiles could be used against you or your business—and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational "bread crumbs" you leave when you use Google search How Gmail could be used to track your personal network of friends, family, and acquaintances How Google's map and location tools could disclose the locations of your home, employer, family and friends, travel plans, and intentions How the information stockpiles of Google and other online companies may be spilled,
