"This important resource offers a practical approach to understanding the health of males of all races, ethnicities, socioeconomic status, cultures, ages, and orientations. It provides solid guidance for males to optimize their well-being and prevent illness and impairment. Each chapter of this book comprehensively reviews an important dimension of a male health and examines the contributing epidemiological, historical, psychosocial, cultural/ethical, legal, political, and economic influences. It is ideal for programs in health education, public health, community health nursing, and other health sciences. The diverse range of topics will allow for complete coverage ranging from body and sexuality to aggression and occupational health"--Provided by publisher. Men drink too much alcohol, eat unhealthy food and avoid going to the doctors until they are seriously ill. Indeed, some say being masculine is bad for men's health. But is the situation so simple? This deeply engaging book explores both the psychological and sociological factors that affect men and their health. It investigates how notions of 'maleness' impact on the individual's approach to health and take-up of services, and provides clear foundations for best practice in care. Part 1 of the book explores and sets the theoretical scene. It asks why disparate fields have not previously been brought together and what theoretical frameworks could be utilised to assist in this process. Parts 2 and 3 consider empirical work in relation to men, health and illness, providing critical rather than simply descriptive accounts. Bringing together an international collection of contributors, *Men, Masculinities and Health* provides fresh ideas for practice; creating a fertile terrain for future debate that will excite all those interested in gender issues.

Developments in health, science and technology have long provided fertile analytical ground for social science disciplines. This book focuses on the critical and enduring importance of core concepts in anthropology and sociology for interrogating and keeping pace with developments in the life sciences. The authors consider how transformations in medical and scientific knowledge serve to reanimate older controversies, giving new life to debates about relations between society, culture, knowledge and individuals. They reflect on the particular legacies and ongoing relevance of concepts such as 'culture', 'society', 'magic', 'production', 'kinship', 'exchange' and 'the body'. The chapters draw on the work of key historical and contemporary figures across the social sciences and include a range of illustrative case studies to explore topics such as transplant medicine, genetic counselling, cancer therapy, reproductive health and addiction. Of particular interest to students and scholars of anthropology, sociology, and science and technology studies, this volume will also be a valuable resource for those working in the fields of health and medicine. The different research fields – gerontology, gender and health – have generated different views, knowledge and foci on ageing, health and gender. It is now necessary to integrate these aspects into research, policy and practice. The objective of this book is to provide an overview of gender, health and ageing. Important theoretical concepts, such as life course and "Lebenslagen" in old age, or differences in men's health, are introduced. It is increasingly important to build a European basis of knowledge, to conduct discussions on European research findings, and to develop European research frameworks. In this volume, central theoretical debates on gender impacts on life course and old-age health, and vital issues of health research in the context of gender and old age are introduced. Specific aspects, such as the impact of gender and age on

cardiovascular health, elder abuse and mental health, or care between gender relations, gender roles and gender constructs, are pointed out. Special attention is given to the impact of social, political and economic change in different New EU Member States, like Hungary, Poland and Slovenia.

This volume intends to re-establish social gerontology as a discipline that has pragmatic links to policy and practice. Collectively, the chapters enrich public debates about the moral, cultural and economic questions surrounding aging, thereby ameliorating the “ problems ” associated with aging societies. This volume is uniquely cross-cultural, theory-driven and cross-disciplinary. It fills a gap in the gerontological scholarship of the global south that is predominantly descriptive and empirical. Based on original research, this volume examines in particular the sociological question of inequality and its intersection with age, gender, health, family and social relations. In the process, the studies herein highlight the unique historical, institutional and social systems that govern the subjective experience of aging in diverse contexts globally. Specifically, societies in transition including India, Lebanon, Nigeria, Japan, China, Israel and in Europe are studied while connecting the micro-social experience of aging (loneliness, wellbeing, discrimination, relationships and resilience) with larger temporal and political contexts. This exercise generates intellectual capital that reformulates links between aging research and policy in innovative ways. Overall, the volume echoes the global scientific commitment to understand the socio-cultural process of aging in transitional societies and utilizes rich opportunities for cross-fertilization of ideas, disciplines and methods to advance the gerontological promise of critical inquiry, training and practice.

This work crosses conceptual, disciplinary and national boundaries to present a wide range of issues pertaining to conflict and violence in close, personal relationships. The book is essential for practitioners and students.

Both health care practitioners and health planners are beginning to recognize the importance of differences between lay and professional concepts of health and illness. The editors of this volume, having themselves worked in this field for many years, have selected and brought together writings by distinguished scholars from Britain, France, the United States, Germany and Poland. What impresses most is the range of problems synthesized from a genuinely international and interdisciplinary perspective. No reader can fail to be fascinated by the often peculiar ways in which different societies have tried to cope with the existential questions of health and illness.

***Sexual violence against men is an under-theorised and under-noticed topic, though it is becoming increasingly apparent that this form of violence is widespread. Yet despite emerging evidence documenting its incidence, especially in conflict and post-conflict zones, efforts to understand its causes and develop strategies to reduce it are hampered by a***

dearth of theoretical engagement. One of the reasons that might explain its empirical invisibility and theoretical vacuity is its complicated relationship with sexual violence against women. The latter is evident empirically, theoretically, and politically, but the relationship between these violences conjures a range of complex and controversial questions about the ways they might be different, and why and how these differences matter. It is the case that sexual violence (when noticed at all) has historically been understood to happen largely, if not only, to women, allegedly because of their gender and their ensuing place in gender orders. This begs important questions regarding the impact of increasing knowledge about sexual violence against men, including the impact on resources, on understandings about, and experiences of masculinity, and whether the idea and practice of gender hierarchy is outdated. This book engages this diverse set of questions and offers fresh analysis on the incidences of sexual violence against men using both new and existing data. Additionally, the authors pay close attention to some of the controversial debates in the context of sexual violence against men, revisiting and asking new questions about the vexed issue of masculinities and related theories of gender hierarchy. The book will be of great interest to students and scholars of sex, gender, masculinities, corporeality, violence, and global politics, as well as to practitioners and activists.

Traditionally, medicine has involved therapies chosen according to clinical guidelines, often arrived at through clinical trials which categorized patients into patient groups. Such clinical guidelines would dictate that all patients within a specific group should be treated in exactly the same way. More recently, the paradigm has shifted towards personalized medicine, and in future, individual treatment plans will depend more on the specific characteristics of individual patients, including genomic data. This book presents the proceedings of the 9th scientific eHealth conference, the eHealth Summit Austria, held in Vienna, Austria, in June 2015. Among the main topics addressed at the conference were: active and ambient assisted living (AAL); eHealth education; electronic patient and health records; ethical legal and economic aspects of eHealth; ICT for integrated treatment, research and

personalized medicine; patient portals and personal health records; semantic interoperability of information systems; and visualization of clinical or epidemiological data. One of the first fields of application for personalized medicine has been oncology, with current diagnostic tools including molecular risk factors, biomarkers and individual genomes. The next step in personalized medicine will be to extend these to a more general, personalized health approach. Such individual risk assessment and preventive strategies promise to have a huge impact on our healthcare systems, and this book will be of interest to all those involved in healthcare research, provision and practice.

All over the world, men as well as women exchange sex for money and other forms of reward, sometimes with other men and sometimes with women. In contrast to female prostitution, however, relatively little is known about male sex work, leaving questions unanswered about the individuals involved: their identities and self-understandings, the practices concerned, and the contexts in which they take place. This book updates the ground-breaking 1998 volume of the same name with an entirely new selection of chapters exploring health, social, political, economic and human rights issues in relation to men who sell sex. Looking at Europe, North America, Latin America and the Caribbean, Africa and the Asia-Pacific, each chapter explores questions such as: What is known about the different ways in which men exchange sex for money or other forms of reward? What are the major contexts in which sexual exchange takes place? What meanings do such practices carry for the different partners involved? What are the health and other implications of contemporary forms of male sex work? *Men Who Sell Sex* seeks to push the boundaries both of current personal and social understandings and the practices to which these give rise. It is an important reference work for academics and researchers interested in sex work and men's health including those working in public health, sociology, social work, anthropology, human geography and development studies.

**In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean**

they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. **Communities in Action: Pathways to Health Equity** seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

**Caring for the Vulnerable: Perspectives in Nursing Theory, Practice, and Research** focuses on vulnerable populations and how nurses can care for them, develop programs for them, conduct research, and influence health policy. Units I and II focus on concepts and theories; Unit III on research; Units IV, V, and VI on practice-oriented measures, including teaching nursing students to work with vulnerable patients and clients; and Unit VII on policy. The text provides a broad overview of material critical to working with these populations, comprehensive treatment of issues related to vulnerable populations, outstanding contributors who are experts in what they write, and a global focus. The Fifth Edition will be a major overhaul, as each new edition of this text has been. There will be a total of 31 new chapters focusing on new and emerging research on vulnerable populations. This text is generally used as a supplement in a wide variety of courses - from health promotion to population health, to global health. **New to the Fifth Edition: Thirty-one new chapters focusing on new and emerging research on vulnerable populations, exploring topics such as: Intersection of Racial Disparities and Privilege in Women's Health HIV Prevention Education Caring for the Transgender Community Caring for Vulnerable Populations: Outcomes with the DNP-Prepared Nurse** With some chapters delving into key clinical topics in identified regions, such as: **Opioid Abuse and Diversion Prevention in Rural Eastern Kentucky The Effects of Gun Trauma on Rural Montana Healthcare Providers Health Care in Mexico** Fifth edition will continue to focus more on DNP authors and assess each chapter for relevance to DNP-prepared nurses Features an included test bank, practice activities, PPTs, IM, and a sample syllabus

*This unique book provides a practical framework for and coverage of a broad range of mental health concerns applicable to the care of athletes, including depression, suicide, mood disorders, substance abuse and risk-taking behaviors. To this end, it presents content relevant to the care of athletes, including doping and the use of performance-enhancing drugs, the mental health impact of concussion, bullying and hazing, the impact of social media*

and exercise addiction, among other pertinent topics. Current basic and translational research on behavioral health and the relationship of brain to behavior are reviewed, and current treatment approaches, both pharmacological and non-pharmacological (including mindfulness training), are considered. This practical resource targets the stigma of mental in athletes in order to overcome barriers to care by presenting a definitive perspective of current concepts in the mental health care of athletes, provided by experts in the field and targeting sports medicine providers, mental health providers and primary care physicians involved in the direct care of recreational and competitive athletes at all levels. This book brings together various threads of research in the field of gender mainstreaming. It aids in further supporting and understanding the role of gender in health and safety research, practice, and policy. It looks at gender mainstreaming as being recognised as key in cultivating sustainable worker health and working systems due to it being a central component of many international policy initiatives. This book deals with gender mainstreaming being advocated at a policy level, while focusing on the limited recognition and discourse on the issue of gender and its direct and indirect association to workers' health in the field of occupational health and safety. This book addresses problems facing gender-sensitive policies and outlines and reflects upon current best practice principles and practices to support the development and implementation of policies, interventions, and research initiatives.

Worldwide, men have more opportunities, privileges, and power, yet they also have shorter life expectancies than women. Why is this? Why are there stark differences in the burden of disease, quality of life, and length of life amongst men, by race, ethnicity, (dis)ability status, sexual orientation, gender identity, rurality, and national context? Why is this a largely unexplored area of research? *Men's Health Equity* is the first volume to describe men's health equity as a field of study that emerged from gaps in and between research on men's health and health inequities. This handbook provides a comprehensive review of foundations of the field; summarizes the issues unique to different populations; discusses key frameworks for studying and exploring issues that cut across populations in the United

States, Australia, Canada, the United Kingdom, Central America, and South America; and offers strategies for improving the health of key population groups and achieving men's health equity overall. This book systematically explores the underlying causes of these differences, describes the specific challenges faced by particular groups of men, and offers policy and programmatic strategies to improve the health and well-being of men and pursue men's health equity. *Men's Health Equity* will be the first collection to present the state of the science in this field, its progress, its breadth, and its future. This book is an invaluable resource for scholars, researchers, students, and professionals interested in men's health equity, men's health, psychology of men's health, gender studies, public health, and global health.

**PERSPECTIVES IN MALE PSYCHOLOGY** Discover a balanced perspective on men's psychology in this accessible new resource Male psychology is a new field within the discipline of psychology, which focuses on men and boys. Male psychology moves us towards a more scientific and balanced understanding of the psychology of men and of boys, drawing on a range of perspectives, and away from an overreliance on social constructionism and preoccupations with notions such as patriarchy and privilege, too often seen in the narrative about men. In *Perspectives in Male Psychology: An Introduction*, two of the most prominent authors in this new field, Louise Liddon and John Barry, introduce and deliver an insightful exploration of some of today's most hotly contested issues regarding men and masculinity. This book puts forward a balanced perspective that has been missing from academic and media narratives around topics such as child development, education, sport and exercise, the workplace, crime, the military, health and wellbeing, mental health, therapy, masculinity, and sex differences, and considers the role that evolution, biology, and culture play in shaping male behavior. This book will also help readers to better understand some key issues such as: Why there are controversies around sex differences research How bias in research has led to a distorted view of the psychology of men and boys The ways in which the mental health and other needs of men and boys are routinely overlooked In turn this helps us ask some important questions such as: If there are more similarities than differences between men and women, does that mean the differences are unimportant? How can we un-distort our understanding of men and masculinity? What are the best ways of identifying and meeting the psychological needs of men and boys? Readers, whether students or lecturers, will also benefit from the inclusion of our companion Wiley website containing additional resources to support the development of knowledge and understanding of male psychology. Perfect for undergraduate and graduate students in psychology, medicine, and sociology, as well as established professionals in these and related fields, *Perspectives in Male Psychology: An Introduction* will also earn a place in the libraries of anyone interested in the psychology of sex and gender differences in various aspects of mental health and human behaviour.

Extensive social science research, particularly by anthropologists, has explored women's reproductive lives, their use of reproductive technologies, and their experiences as mothers and nurturers of children. Meanwhile, few if any volumes have explored men's reproductive concerns or contributions to women's reproductive health: Men are clearly viewed as the "second sex" in reproduction. This volume argues that the marginalization of men is an oversight of considerable proportions. It sheds new light on male reproduction from a cross-cultural, global perspective, focusing not only upon men in Europe and America but also those in the Middle East, Asia, and Latin America. Both heterosexual and homosexual, married and unmarried men are featured in this volume, which assesses concerns ranging from masculinity and sexuality to childbirth and fatherhood.

*Global Perspectives in Health* is a component of *Encyclopedia of Biological, Physiological and Health Sciences* in the global *Encyclopedia of Life Support Systems (EOLSS)*, which is an integrated compendium of twenty one Encyclopedias. The Theme on *Global Perspectives in Health* provides the

essential aspects and with a myriad of issues of great relevance to our world such as: Global Perspectives in Health; Determinants of Health and Their Interactions; Epidemiology: Health and Disease in Populations; Health Care Systems; Ethical Issues in Health; New Problems in Global Health. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

*Aging Men, Masculinities and Modern Medicine* explores the multiple socio-historical contexts surrounding men's aging bodies in modern medicine from a global perspective. The first of its kind, it investigates the interrelated aspects of aging, masculinities and biomedicine, allowing for a timely reconsideration of the conceptualisation of aging men within the recent explosion of social science studies on men's health and biotechnologies including anti-aging perspectives. This book discusses both healthy and diseased states of aging men in medical practices, bringing together theoretical and empirical conceptualisations. Divided into four parts it covers: Historical epistemology of aging, bodies and masculinity and the way in which the social sciences have theorised the aging body and gender. Material practices and processes by which biotechnology, medical assemblages and men's aging bodies relate to concepts of health and illness. Aging experience and its impact upon male sexuality and identity. The importance of men's roles and identities in care-giving situations and medical practices. Highlighting how aging men's bodies serve as trajectories for understanding wider issues of masculinity, and the way in which men's social status and men's roles are made in medical cultures, this innovative volume offers a multidisciplinary dialogue between sociology of health and illness, anthropology of the body and gender studies.

The book is clearly written and the coverage of existing literature is excellent. I have no hesitation in recommending it to all those wishing to extend their understanding of masculinities and health." Professor Lesley Doyal, Journal of Men's Health "This book offers something very different; it is easy to read and is set out in a logical order. The chapters have sub-headings, which enable the reader to either read the book by subject, or from cover to cover depending on reading style. The book offers an excellent description and analysis of concepts and issues relating to gender and its effect on engagement with health services. This book applies a rich body of knowledge and theory from social and behavioral sciences to contemporary health issues. A guiding principle of the book is the importance of social context and cultural construction in the analysis of health problems. It addresses the multiple layers of influence on health, enlarging the dominant "risk factor" approach to health behavior by giving sufficient attention to the social environment. The book draws from many disciplines (sociology, anthropology, social psychology, demography, gerontology, economics, and history), and uses examples and case studies specifically from the forefront of public health. The book is especially useful for the way that it discusses core concepts and models and applies them to real world problems.

Women's Health Issues Across the Life Cycle: A Quality of Life Perspective is a unique text that explores a wide-variety of health issues and concerns for women to offer a holistic approach to care. Presented within a quality of life framework, it provides a women-centered perspective to explore the range of factors that can impact women's health and well-being throughout the major life stages. The first text of its kind, Women's Health Issues Across the Life Cycle: A Quality of Life Perspective examines the ways in which the physical, psychological, spiritual, socioeconomic, and family domains impact women's quality of life. It also offers current research specific to women's health, health promotion strategies and interventions, case studies, critical thinking questions, and Internet resources for more information.

Handbook of Aging and Mental Health brings together, for the first time, diverse strategies and methodologies as well as theoretical formulations involving psychodynamic, behavioral, psychosocial, and biological systems as they relate to aging and health. Forward-thinking in his approach, Lomranz provides the mental health, adult developmental, and geriatric professions with a single

reference source that covers theory construction, empirical research, treatment, and multidisciplinary program development. Despite diverse, rich cultural traditions and abundant economic opportunity, there has been a paucity of research on psychology in Southeast Asia. This book aims to fill that gap, with a series of well-written theoretical and empirical chapters by PhD psychologists in SE Asia along with respected international colleagues and co-authors from around the globe. In particular this book focuses upon critical sociocultural, clinical, and health issues and perspectives in psychology in Southeast Asia. Overviews help contextualize the cultural data, permitting nuanced examination of significant psychological issues in nations such as Malaysia, Indonesia, Thailand, Singapore, and more. Psychologists and mental health professionals with interests in Asia will find this book to be a must-read, as will other readers seeking to deepen their cultural and international understanding.

Following on the previous volume, *Mental Health in Asia and the Pacific*, which was co-edited with Milton Lewis, this book explores historical and contemporary developments in mental health in China and Chinese immigrant populations. It presents the development of mental health policies and services from the 19th Century until the present time, offering a clear view of the antecedents of today's policies and practice. Chapters focus on traditional Chinese conceptions of mental illness, the development of the Chinese mental health system through the massive political, social, cultural and economic transformations in China from the late 19th Century to the present, and the mental health of Chinese immigrants in several countries with large Chinese populations. China's international political and economic influence and its capabilities in mental health science and innovation have grown rapidly in recent decades. So has China's engagement in international institutions, and in global economic and health development activities. Chinese immigrant communities are to be found in almost all countries all around the world. Readers of this book will gain an understanding of how historical, cultural, economic, social, and political contexts have influenced the development of mental health law, policies and services in China and how these contexts in migrant receiving countries shape the mental health of Chinese immigrants. *Essential Concepts for Healthy Living, Fifth Edition Update* provides students with a clear and concise introduction to the latest scientific and medical research in personal health. *This book examines childcare in ancient Indian health systems from the perspective of developmental psychology. The author extensively studies ancient texts and charts from Ayurveda, Unani, Siddha and Tibetan medicines and analyses how gleanings from these systems can be useful in creating preferred practices for modern childcare systems. Though the four systems originated in different geographical regions, they share many common core constructs of a holistic approach consisting of mind-body unity. The core of psychological healing in these systems rests on bringing about harmony and balance of disturbed functions through diet, daily regimen and drugs. However, despite commonalities, understanding of childcare in the four systems varies a great deal. The differences seem to be rooted in local sociocultural, religious and folk healing practices. Remarkably, in all of them, prescriptions of drugs and behaviour are psychologically grounded and uncannily modern from the perspective of developmental psychology. The book raises the following questions as important for further research: whether holistic approaches be adopted for the empirical study of indigenous health systems, where their strength lies; whether personality frameworks identified in the four systems can be incorporated into contemporary medical practice to its advantage; whether preferred childcare practices among the four systems can be studied empirically in current paediatric, psychological and parenting research; and whether faith, if it is of importance to the patient, can be incorporated as an element into contemporary medical practice.*
