In Day One, automotive journalist Marty Schorr recalls life on the front line in the classic muscle car era, thrashing brand-new cars that would become collector vehicles. Most muscle-car books celebrate beautifully-restored vehicles surrounded by hard facts; Day One tells the real story from the point-of-view of one of the period's most respected automotive journalists, Marty Schorr. For the first time in print, you'll get a unique perspective on what it was like to actually drive, race, and otherwise thrash what are some of today's most valuable collector cars. CARS, the iconic magazine Marty wrote and edited didn't rely on industry advertising for revenue. Instead, the magazine made money the old fashioned way, from newsstand sales, leaving it able to be honest and frank in its coverage of high-performance street cars. CARS magazine reported on both Day stock and modified cars, cars the traditional magazines wouldn't touch, like the ultra-high-performance vehicles from companies like Baldwin-Motion, Yenko Chevrolet, Nicky Chevrolet, Royal Pontiac, and Tasca Ford. Prepare yourself for Day One to cover the most important cars of a given year, including: Pontiac's 1962-1963 lightweight Super-Duty 421 street and Swiss Cheese models Chevrolet's 1963 big-block 427 Mystery Motor and ZL-1 Impala. In their contribution to the first edition of this Handbook, entitled "The Teeth," LEHNER and PLENK (1936) discussed the issues constituting the "perio dontium" rather briefly. In contrast to the detailed paragraphs dealing with, for example, enamel and dentine, the section (about 40 pages and 20 illustra tions, mostly drawings) devoted to periodontal tissues failed to provide a factual review and summary of the contemporary knowledge and latest developments in research on the various components of the periodontium. Instead, much of the text was an attempt to arrive at conclusions from often purely semantic speculations, playing the various schools of thought against each other, provid ing arguments in favor of the authors' views and arguments for the feasibility and probability of accepting or rejecting the often diverse opinions, while the reader was referred to the already existing literature for factual details. Since 1936, however, factual details of the structural biology of the periodon tal tissues, i. e. their development, structure, function, and physiology, have been greatly extended and have been internationally accepted. With much less opin ionated belief to cope with, this knowledge has formed the solid foundation upon which diagnosis, prevention, and treatment in the fields of clinical perio dontology, modern orthodontics, and re- and transplantation procedures of teeth have been built.

The evolution of the automotive transmission has changed rapidly in the last decade, partly due to the advantages of highly sophisticated electronic controls. This evolution has resulted in modern automatic transmissions that offer more control, stability, and convenience to the driver. Electronic Transmission Controls contains 68 technical papers from SAE and other international organizations written since 1995 on this rapidly growing area of automotive electronics. This book breaks down the topic into two sections. The section on Stepped Transmissions covers recent developments in regular and 4-wheel drive transmissions from major auto manufacturers, including Daimler Chrysler, General Motors, Toyota, Honda, and Ford. Technology covered in this section includes: smooth shift control automatic transmission efficiency mechatronic systems fuel saving technologies shift control using information from vehicle navigation systems fuzzy logic control. The section on Continuously Variable Transmissions presents papers that demonstrate that CVTs offer better efficiency than conventional transmissions.Technologies covered in this section include: powertrain control fuel consumption improvement development of a 2-way clutch system internal combustion engines with CVTs in passenger cars control and shift strategies CVT application to hybrid powertrains. The book concludes with a chapter on the future of electronic transmissions in automobiles.

The modern American child's diet is awash in sugar—including mainstays such as juice, chocolate milk, sugary cereals, soda, energy drinks, and fast-food burgers and nuggets with added corn syrup and sweeteners, let alone candy and cookies prevalent at school parties and play dates. Beat Sugar Addiction Now! for Kids gives parents a proven 5-step plan for getting and keeping their child off sugar. Bestselling author and noted physician Dr. Jacob Teitelbaum and pediatric nutrition specialist Deborah Kennedy, Ph.D., give parents a toolkit for avoiding the common pitfalls such as guilt and temper tantrums, managing the 5-step process successfully on a day-to-day basis, and getting their child emotionally, as well as physically, unhooked from sugary drinks, breakfast foods, snacks, and desserts, as well as "hidden" sugars in foods.

The MGB was a great British success story, a product largely conceived, designed and produced by a small team of dedicated people who genuinely cared about their work. Of course, the MGB came from a proud, successful sports car tradition, and the model it replaced - the revolutionary aerodynamic MGA - had been an unprecedented success - so the new car had big shoes to fill. Launching in 1962 and in production for eighteen years, the MGB became one of the most successful sports cars the world has ever known. This book describes how the MGB arose principally from the ideas of one man, MG's Chief Engineer, Syd Enever, how it was designed and developed, how it survived and thrived, and how it became the classic car still highly regarded today. There have been many previous books about the MGB, and the related MGC and V8 variants, but MGB - The superlative MG reaches a new level of detail together seasoned with fresh insight. David Knowles has been researching and writing about the MGB for more than thirty years. Prepare to be surprised at some of the stories you will have never read before, and new twists on some you possibly thought you knew well.

The best years of the automobile lie before us. But it will be a new kind of car and a new kind of automotive experience. There will be a new powertrain dominating the motoring world. Driving will gradually be ceded to the on-board electronics, and, in response, interiors will become more luxurious and sociable. The car will connect with other cars, and infrastructure, a community and ecology of mobility.Brave New Car outlines the possibilities, and opportunities, that lie before us.A premium quality book for the professional, student, and enthusiast alike, Brave New Car is sure to challenge and inspire new thinking in the automotive world and beyond.

Direct injection spark-ignition engines are becoming increasingly important, and their potential is still to be fully exploited. Increased power and torque coupled with further reductions in fuel consumption and emissions will be the clear trend for future developments. From today's perspective, the key technologies driving this development will be new fuel injection and combustion processes. The book presents the latest developments, illustrates and evaluates engine concepts such as downsizing and describes the requirements that have to be met by materials and operating fluids. The outlook at the end of the book discusses whether future spark-ignition engines will achieve the same level as diesel engines.

The transition to clean energy is moving far too slowly. Trapped by a century of fossil fuel investments and politicians that struggle to plan beyond the next election, the "Big Grid" that powers our modern world is outdated and in dire need of an upgrade. Freeing Energy offers a new and faster path towards a clean energy future—one that is more reliable, more equitable, and cheaper. Just like personal computers eclipsed mainframes, millions of solar rooftops and small battery systems are challenging every assumption about our century-old, centralized electric grid. These small-scale "local energy" systems are deeply disruptive because they are based on fast-moving technologies, not fuels. Driven by a new generation of innovators and genuinely competitive markets, smaller systems are faster to build, easier to finance, cleaner to operate, and they create far more jobs than large-scale projects. Bill Nussey takes readers to mud huts in Africa, an off-grid farm in California, and a rural school in the mountains of Puerto Rico to uncover the underlying patterns of technology and the business model

innovations of the local energy revolution. He shares stories and insights from some of the industry's brightest visionaries and from leaders of the most cutting-edge startups, bringing it all together into an actionable framework to help accelerate this transition. Freeing Energy is a deeply researched, actionable guide for anyone that cares about the future of energy.

From startups, policymakers, investors, and utility leaders to the families and communities that want cleaner, cheaper energy today.

This book collects images that New York-based artist Anne Collier (born 1970) originally presented as a slideshow of 80 35mm slides depicting found images of female subjects in the act of taking self-portraits. Dating from the 1970s to the early 2000s, these relics of the pre-digital age were collected by Collier, each image discarded by its original owner but finding its way back to relevance in Collier's work. The slideshow consists of amateur snapshots of women photographing themselves with film cameras prior to the advent of the digital "selfie." Instead of circulating on social media, these abandoned images once existed for a private audience. The resulting work is steeped in a deep sense of loneliness, illustrating photography's contentious relationship to memory, loss and self-representation. The book represents a kind of sequel to Collier's 2017 book Women with Cameras (Anonymous).

Alexander Dieks conceptualizes and applies a more nuanced model of the brand purchase funnel. The re-conceptualization builds on a holistic, theory-based, and practically applicable set of 10 propositions, which capture dynamics of consumers' contemporary search and decision behavior and allow for a more differentiated assessment of brand performance across the buying cycle. The model's value add is investigated based on two survey-based studies from the automotive and the electricity industry. Using logistic regression analysis, the author uncovers insightful differences in the determinants of consumers' purchase decisions depending on the stage of consideration set formation. The findings support the employment of the more nuanced funnel in brand management.

There I Was marks a shift in medium and a conceptual departure for Collier Schorr. She is best known for her photographic studies of a real and imagined town in southern Germany, works which tease the accepted artifice of photography to forge an appropriated remembrance of German histories. Schorr found drawing a more acute medium to describe events that took place in the neighbourhoods of her childhood, specifically the music car counter culture of the 1960s in Long Island and Queens, NY. This history is related through the short but spectacular life of charismatic 19 year-old drag car racer Charlie Astoria Chas Snyder and his 67 Ko-Motion Corvette. At the age of four Schorr accompanied her father, an automotive photographer and journalist, to a local race track where she watched Astoria Chas work on his car. A subsequent article followed, with the now eerie headline While Astoria Chas is doing his thing in Vietnam his friends are racing his L-88. By the time the article was published, Charlie Snyder had died in action in Vietnam. There I Was is Snyder's story and Schorr's dilemma. He was there, she was not. The project examines the role of the photograph as proof of the photographer's presence, territory and view, and the difficulty of representing any past without the theatricality of re-staging it. Based entirely on photography, the book engages with the medium and simultaneously challenges the role of the photograph as document of the past. Using a collision of source materials for the drawings, beginning with her fathers images and Snyders own snapshots taken in Vietnam, Schorr then draws from professional reportage pictures, so as to describe, literally sketch out, one monumental trip from Queens to Vietnam and back. These drawings are contrasted by reproductions of vintage car magazine articles and Schorr's own photograph portraits. There I Was is a complex and multi-faceted look at escape, culture, dreams and mortality, conjuring up an expressionistic portrait of the dichotomies of the late 1960s in a fractured wartime America.

In this original study of intellectual property rights (IPR) in relation to state capacity, Dimitrov analyzes this puzzle by offering the first systematic analysis of all IPR enforcement avenues in China, across all IPR subtypes. He shows that the extremely high volume of enforcement provided for copyrights and trademarks is unfortunately of a low quality, and as such serves only to perpetuate IPR violations. In the area of patents, however, he finds a low volume of high-quality enforcement. In light of these findings, the book develops a theory of state capacity that conceptualizes the Chinese state as simultaneously weak and strong. The book draws on extensive fieldwork in China and five other countries, as well as on 10 unique IPR enforcement datasets that exploit previously unexplored sources, including case files of private investigation firms.
