

Decisions For Health Red Edition

This major new work updates and significantly expands The Hastings Center's 1987 Guidelines on the Termination of Life-Sustaining Treatment and Care of the Dying. Like its predecessor, this second edition will shape the ethical and legal framework for decision-making on treatment and end-of-life care in the United States. This groundbreaking work incorporates 25 years of research and innovation in clinical care, law, and policy. It is written for physicians, nurses, and other health care professionals and is structured for easy reference in difficult clinical situations. It supports the work of clinical ethicists, ethics committee members, health lawyers, clinical educators, scholars, and policymakers. It includes extensive practical recommendations. Health care reform places a new set of challenges on decision-making and care near the end of life. The Hastings Center Guidelines are an essential resource.

Encouraging Healthy Relationships

Consumer Health: Making Informed Decisions

How You and Your Doctor Can Make the Right Medical Choices Together

Risk assessment has become a dominant public policy tool for making choices, based on limited resources, to protect public health and the environment. It has been instrumental to the mission of the U.S. Environmental Protection Agency (EPA) as well as other federal agencies in evaluating public health concerns, informing regulatory and technological decisions, prioritizing research needs and funding, and in developing approaches for cost-benefit analysis. However, risk assessment is at a crossroads. Despite advances in the field, risk assessment faces a number of significant challenges including lengthy delays in making complex decisions; lack of data leading to significant uncertainty in risk assessments; and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment. Science and Decisions makes practical scientific and technical recommendations to address these challenges. This book is a complement to the widely used 1983 National Academies book, Risk Assessment in the Federal Government (also known as the Red Book). The earlier book established a framework for the concepts and conduct of risk assessment that has been adopted by numerous expert committees, regulatory agencies, and public health institutions. The new book embeds these concepts within a broader framework for risk-based decision-making. Together, these are essential references for those working in the regulatory and public health fields.

Revised and Expanded Second Edition

Critical Decisions

The four principles that can help us to overcome our brains' natural biases to make better, more informed decisions--in our lives, careers, families and organizations. In Decisive, Chip Heath and Dan Heath, the bestselling authors of Made to Stick and Switch, tackle the thorny problem of how to overcome our natural biases and irrational thinking to make better decisions, about our work, lives, companies and careers. When it comes to decision making, our brains are flawed instruments. But given that we are biologically hard-wired to act foolishly and behave irrationally at times, how can we do better? A number of recent bestsellers have identified how irrational our decision making can be. But being aware of a bias doesn't correct it, just as knowing that you are nearsighted doesn't help you to see better. In Decisive, the Heath brothers, drawing on extensive studies, stories and research, offer specific, practical tools that can help us to think more clearly about our options, and get out of our heads, to improve our decision making, at work and at home.

Chapter Resources Packages: Red Edition

"As a physician and a social scientist, Peter Ubel is unparalleled in his understanding of some of the most important decisions we are facing, or will face." —Dan Ariely, New York Times bestselling author of Predictably Irrational "His ideas are important, his style is accessible (with the right balance of humor and compassion) and his topic is timely." —Dan Gilbert, author of Stumbling on Happiness and host of "This Emotional Life" All too often, problems in communication between a doctor and patient can lead to bad medical decisions.

As a practicing physician and a behavioral scientist, Dr. Peter Ubel has a unique understanding of this dangerous situation—and in Critical Decisions he addresses the problem while revealing a new revolution in medical decision-making. Critical Decisions combines eye-opening medical stories with groundbreaking behavioral science research, while offering important information and common sense solutions to promote better doctor/patient relationships thereby ensuring that the right decision will be made in life-saving medical situations.

Consumer Health: Making Informed Decisions is a concise, current text with the most up-to-date information about health care reform and insurance. It is devoted to the most important issues relative to consumer health issues, including advertising, dietary supplements, herbal remedies, weight management, and medications. There are in-depth analyses of the American health care system, insurance options, and consumer protection. The text also takes a critical look at complementary and alternative therapies. Throughout the text, there are guidelines for making decisions that can benefit the individual. A comprehensive list of learning objectives precede each chapter and a list of study questions conclude each chapter. The questions are designed to help the student summarize the major points of the chapter, prepare for exams, and critically analyze the material contained in the chapters.
