

New Framework 4

It gives me immense pleasure to introduce this timely handbook to the research/- velopment communities in the ?eld of signal processing systems (SPS). This is the ?rst of its kind and represents state-of-the-arts coverage of research in this ?eld. The driving force behind information technologies (IT) hinges critically upon the major advances in both component integration and system integration. The major breakthrough for the former is undoubtedly the invention of IC in the 50's by Jack S. Kilby, the Nobel Prize Laureate in Physics 2000. In an integrated circuit, all components were made of the same semiconductor material. Beginning with the pocket calculator in 1964, there have been many increasingly complex applications followed. In fact, processing gates and memory storage on a chip have since then grown at an exponential rate, following Moore's Law. (Moore himself admitted that Moore's Law had turned out to be more accurate, longer lasting and deeper in impact than he ever imagined.) With greater device integration, various signal processing systems have been realized for many killer IT applications. Further breakthroughs in computer sciences and Internet technologies have also catalyzed large-scale system integration. All these have led to today's IT revolution which has profound impacts on our lifestyle and overall prospect of humanity. (It is hard to imagine life today without mobiles or Internets!) The success of SPS requires a well-concerted integrated approach from mul- ple disciplines, such as device, design, and application.

Dementia presents a significant social issue in a hyper-cognitive culture where stigma, relational neglect, and isolation still accompany forgetfulness. This raises serious theological, ecclesiological, and pastoral questions calling for a Christian response. To fight against a malignant social positioning of anyone as an "an empty shell" is crucial; nonetheless, there is another pressing reality, the reality of ongoing loss. Often the focus is on one or the other side: affirming personhood or acknowledging loss and grief. Spiritual caregiving and Christian pastoral caregiving are uniquely placed to offer both sustaining relationship and grief support to both caregivers and persons with dementia. This pastoral approach emerges from cultural scholarship, rigorous on-the-ground research, and theological reflection on God's purposes in responding to persons in and beyond the Christian community. Christian communities are called to be places of agape love, compassion, and hospitality. We, individually and corporately, are called to care: to love, honor, value, comfort, and sustain one another--and "one another" includes those who travel the road of forgetting and those who travel with them. This fresh pastoral approach offers theologically and culturally informed, practical ways of sustaining persons in the midst of their losses, throughout the dementia journey.

A proposal that human social cognition would not have evolved without mechanisms and practices that shape minds in ways that make them easier to interpret. In this novel account of distinctively human social cognition, Tadeusz Zawidzki argues that the key distinction between human and nonhuman social cognition consists in our complex, diverse, and flexible capacities to shape each other's minds in ways that make them easier to interpret. Zawidzki proposes that such "mindshaping"--which takes the form of capacities and practices such as sophisticated imitation, pedagogy, conformity to norms, and narrative self-constitution--is the most important component of human social cognition. Without it, he argues, none of the other components of what he terms the "human sociocognitive syndrome," including sophisticated language, cooperation, and sophisticated "mindreading," would be possible. Challenging the dominant view that sophisticated mindreading--especially propositional attitude attribution--is the key evolutionary innovation behind distinctively human social cognition, Zawidzki contends that the capacity to attribute such mental states depends on the evolution of mindshaping practices. Propositional attitude attribution, he argues, is likely to be unreliable unless most of us are shaped to have similar kinds of propositional attitudes in similar circumstances. Motivations to mindshape, selected to make sophisticated cooperation possible, combine with low-level mindreading abilities that we share with nonhuman species to make it easier for humans to interpret and anticipate each other's behavior. Eventually, this led, in human prehistory, to the capacity to attribute full-blown propositional attitudes accurately--a capacity that is parasitic, in phylogeny and today, on prior capacities to shape minds. Bringing together findings from developmental psychology, comparative psychology, evolutionary psychology, and philosophy of psychology, Zawidzki offers a strikingly original framework for understanding human social cognition.

Education in the Creative Economy explores the need for new forms of learning and education that are most conducive to supporting student development in a creative society. Just as the assembly line shifted the key factor of production from labor to capital, digital networks are now shifting the key factor of production from capital to innovation. Beyond conventional discussions on the knowledge economy, many scholars now suggest that digital technologies are fomenting a shift in advanced economies from mass production to cultural innovation. This edited volume, which includes contributions from renowned scholars like Richard Florida, Charles Landry, and John Howkins, is a key resource for policymakers, researchers, teachers and journalists to assist them to better understand the contours of the creative economy and consider effective strategies for linking education to creative practice. In addition to arguments for investing in the knowledge economy through STEM disciplines (science, technology, engineering and math), this collection explores the growing importance of art, design and digital media as vehicles for creativity and innovation.

Country surveillance constitutes an essential part of the IMF's mandate to oversee the international monetary system and to monitor the economic and financial policies of its 185 member countries. The IMF's Executive Board conducts regularly scheduled reviews of country surveillance (the Triennial Surveillance Review) to consider ways to improve its effectiveness. The 2008 review is the first such review since the Executive Board approved, in June 2007, a new Decision on Bilateral Surveillance. This Decision affirms that the focus of bilateral surveillance is on those policies of members that can significantly influence present or prospective external stability. The review focused on the implementation of country surveillance in the recent past, as presented in the following set of papers: • The overview paper presents the main findings and priority areas for further work. The review finds that stakeholders hold the quality of IMF surveillance in high regard, but that improvements should focus on risk assessment, integration of macroeconomic and financial sector surveillance, multilateral perspectives (cross-border spillovers and cross-country analysis), and exchange rate assessments. The priority areas identified in the review served as key background for the preparation of the IMF's Statement of Surveillance Priorities (SSP). • The Thematic Findings (Supplement 1) provides supporting analysis on the implementation of bilateral surveillance in the recent past and, particularly, on the appropriateness of its focus and its analytical value added in particular areas, including the overall "health check", exchange rates, financial sector issues, cross-country analysis and cross-border spillover analysis (including a case study of surveillance in the run up to the subprime crisis), the degree of candor and evenhandedness in surveillance, and the effectiveness of its communication. • The Background Information paper (Supplement 2) provides further information, including a description of review methodologies, and results including interview findings, surveys of various audiences, and supporting data on the quality of consultation documents. • The External Consultant's Report provides an independent view of IMF surveillance in Europe.

Defining a new development life-cycle methodology, together with a set of associated techniques and tools to develop highly critical systems using formal techniques, this book adopts a rigorous safety assessment approach explored via several layers (from requirements analysis to automatic source code generation). This is assessed and evaluated via a standard case study: the cardiac pacemaker. Additionally a formalisation of an Electrocardiogram (ECG) is used to identify anomalies in order to improve existing medical protocols. This allows the key issue - that formal methods are not currently integrated into established critical systems development processes - to be discussed in a highly effective and informative way. Using Event-B for Critical Device Software Systems serves as a valuable resource for researchers and students of formal methods. The assessment of critical systems development is applicable to all industries, but engineers and physicians from the health domain will find the cardiac pacemaker case study of particular value.

In April 2008, the Executive Board adopted a package of measures to reform the Fund's income model. This followed an intensive work program building on the recommendations of an independent committee appointed by the Managing Director to study options for sustainable long-term financing for the Fund. The resulting new income model will diversify the Fund's income sources and reduce its reliance on lending income as the primary source of revenue. This new model includes: (i) creating an endowment funded with the profits from a limited sale of the Fund's gold holdings; (ii) expanding the Fund's investment authority to enhance the expected return on the Fund's investments; and (iii) reimbursing the General Resources Account (GRA) for the cost of administering the PRG Trust

The numerical approximation of solutions of differential equations has been, and continues to be, one of the principal concerns of numerical analysis and is an active area of research. The new generation of parallel computers have provoked a reconsideration of numerical methods. This book aims to generalize classical multistep methods for ordinary differential equations; to present a self-contained theory which embraces and generalizes the classical Dahlquist theory; to treat nonclassical problems, such as Hamiltonian problems and the mesh selection; and to select appropriate methods for a general purpose software capable of solving a wide range of problems efficiently, even on parallel computers. Historically, technological change has had significant effect on the locus of administrative activity, cost of carrying out administrative tasks, the skill sets needed by officials to effectively function, rules and regulations, and the types of interactions citizens have with their public authorities. Next generation Public Sector Innovation will be driven by a number of innovations related to Open and big data, administrative and business process management, Internet-of-Things and blockchains for public sector innovation to drive improvements in service delivery, decision and policy making and resource management. This book provides fresh insights into this transformation while also examining possible ways to increase the effectiveness of governments through the adoption of these new innovations. The goal is for technology policy makers to engage with the visions of Government 3.0. Researchers should be able to critically examine some of the innovations described in the book as the basis for developing research agendas related to challenges associated with the use of some of the associated technologies. The book serves as a rich source of materials from leading experts in the field that enables Public administration practitioners to better understand how these new technologies impact traditional public administration paradigms. The book is suitable for graduate courses in Public Sector Innovation, Public Administration, E-Government and Information Systems. Public sector technology policy makers, e-government, information systems and public administration researchers and practitioners should all benefit from reading this book.
