One of the world's greatest architects, Frank Lloyd Wright, and one of the world's greatest cities, New York, once dynamically coexisted. Authors Jane Hession and Debra Pickrel explore the fascinating contradiction between Wright's often-voiced disdain of New York and his pride and pleasure in living in one of the city's great landmarks: the Plaza Hotel.

This is the definitive study of Frank Lloyd Wright and his work, an eloquent summation of an outstanding career that spanned nearly seventy years of American architectural history. Writing with warmth and penetrating intelligence, Henry-Russell Hitchcock, America's leading architectural expert, explores Wright's distinctive approach to the design and construction of homes, civic centers, housing projects, country clubs, and office buildings—emphasizing throughout Wright's skillful use of materials to create harmony between structure and environment. Hitchcock covers each of the major phases in Wright's first fifty years as an architect: the apprenticeship with J.L. Selsbee; the movement toward maturity with "Lieber Meister" Sullivan, and the links with Richardson, the "prairie" architecture of the early 1900s and the non-domestic work of the same period which exerted so great an influence upon the development of modern European architecture; the textile block housing and cantilevered skyscraper projects of the early '20s; the creative hiatus of the late '20s and early '30s; and the projects of the Depression years, interrupted in 1942 by World War II. More than 400 illustrations are presented in

chronological order in a format Wright himself designed, revealing an endless assortment of shapes, materials and structural ornament that indicate the scope and focus of Wright's genius. Accompanying the photographs, plans, and perspectives is Hitchcock's perceptive commentary, linking each building to a particular phase in Wright's development and showing how in each case the architect forged the elements of materials, mass, space, and ornament into a powerful visual statement. Hitchcock also contributes a list of the architect's completed projects through 1941, and, in a new foreword specially prepared for this Da Capo edition, assesses Wright's major projects during the last two decades of his life.

With four color photographs throughout, this is a spectacular look at the most famous of Wright's public buildings, including corporate structures, churches, hotels, and museums. This remarkable book features some of his greatest designs--Unity Temple, the Guggenheim Museum, Price Tower, Japan's Imperial Hotel, and many others.

The Life and Buildings of America's Most Famous Architect

Frank Lloyd Wright and His Manner of Thought

In architectural terms, the twentieth century can be largely summed up with two names: Frank Lloyd Wright and Philip Johnson. Wright (1867–1959) began it with his romantic prairie style; Johnson (1906–2005) brought down the curtain with his spare postmodernist

experiments. Between them, they built some of the most admired and discussed buildings in American history. Differing radically in their views on architecture, Wright and Johnson shared a restless creativity, enormous charisma, and an outspokenness that made each man irresistible to the media. Often publicly at odds, they were the twentieth century's flint and steel; their repeated encounters consistently set off sparks. Yet as acclaimed historian Hugh Howard shows, their rivalry was also a fruitful artistic conversation, one that yielded new directions for both men. It was not despite but rather because of their contentious--and not always admiring--relationship that they were able so powerfully to influence history. In *Architecture's Odd Couple*, Howard deftly traces the historical threads connecting the two men and offers readers a distinct perspective on the era they so enlivened with their designs. Featuring many of the structures that defined modern space--from Fallingwater to the Guggenheim, from the Glass House to the Seagram Building--this book presents an arresting portrait of modern architecture's odd couple and how they shaped the American landscape by shaping each other.

Frank Lloyd Wright has long been known as a rank egotist who held in contempt almost everything aside from his own genius. Harder to detect, but no less real, is a Wright who fully understood, and suffered from, the choices he made. This is the Wright whom Paul Hendrickson reveals in this masterful biography: the Wright who was haunted by his father, about whom he told the greatest lie of his life. And this, we see, is the Wright of many other neglected aspects of his story: his close, and perhaps romantic, relationship with friend and early mentor Cecil Corwin; the eerie, unmistakable role of fires in his life; the connection between the 1921 Black Wall Street massacre in Tulsa, Oklahoma, and the murder of his mistress, her two children, and four others at his beloved Wisconsin home. showing us Wright's facades along with their cracks, Hendrickson helps us form a fresh, deep, and more human understanding of the man. With prodigious research, unique vision, and his ability to make sense of a life in ways at once unexpected, poetic, and undeniably brilliant, he has given us the defining book on Wright. In Bear Run, Pennsylvania, a home unlike any other perches atop a waterfall. The water's tune plays differently in each of its sunlight-dappled rooms; the structure itself blends effortlessly into the rock and forest behind it. This is Fallingwater, a masterpiece equally informed by meticulous research and unbounded imagination, designed by the lauded American architect Frank Lloyd Wright. This book guides young readers through Wright's process designing Fallingwater, from his initial inspirations to the home's breathtaking culmination. It is a exploration of a man, of dreams, and of the creative process; a celebration of potential. Graceful prose and rich, dynamic illustrations breathe life into the story of Frank and Fallingwater, a man and home utterly unlike any other. Widely thought to be the greatest American architect, Frank Lloyd Wright (1867-1959) was a true pioneer, both artistically and technically. At a time when reinforced concrete and steel were considered industrial building materials, Wright boldly made use of them to build private homes. His prairie house concept--that of a low, sprawling home based upon a simple L or T figure--was the driving force behind some of his most famous houses and became a model for rural architecture across America. Wright's designs for office and public buildings were equally groundbreaking and unique. From Fallingwater to New York's Guggenheim

Museum, his works are among the most famous in the history of architecture. While the formidable reputation of his father overshadows him, Lloyd Wright (1890-1972) and his work are drawing more and more attention. This, the only monograph on his buildings and projects, grew out of an 1971 exhibition held at UC Santa Barbara. After an apprenticeship under Irving Gill, Lloyd Wright moved to Los Angeles, where he was landscaper and construction supervisor for several of his father's projects, including the Hollyhock House. His own work took off from his father's, being even bolder and more expressionistic, perhaps a reflection of his early work in the department at Paramount Pictures. His most famous building is the Sowden house, while other projects include the first two shells for the Hollywood Bowl and the Wayfarers Chapel in Palos Verdes.

Through letters, memoirs, contemporary documents, and a stunning assemblage of photographs - many of which have never before been published - author Ron McCrea tells the fascinating story of the building of Frank Lloyd Wright's Taliesin, which would be the architect's principal residence for the rest of his life. Photos taken by Wright's associates show rare views of Taliesin under construction and illustrate Wright's own recollections of the first summer there and the craftsmen who worked on the site. The book also brings to life Wright's "kindred spirit," "she for whom Taliesin had first taken form," Mamah Borthwick. Wright and Borthwick had each abandoned their families to be together, causing a scandal that reverberated far beyond Wright's beloved Wisconsin valley. The shocking murder and fire that took place at Taliesin in August 1914 brought this first phase of life at Taliesin to a tragic end.

Although you may not recognize the name of this famous American architect, you may be more familiar with some of his most popular buildings. buildings. While in college, Wright worked with an architect in order to pay his tuition. Upon discovering his own passion and talent for the subject, he dropped out of school and went to work for an architectural firm in Chicago. He eventually parted ways with the firm and began designing a series of public buildings and private residences that earned him fame, including the “earthquake proof” Imperial Hotel in Tokyo. Due to the Great Depression, Lloyd stepped back from designing and began writing and teaching. It seemed that he had permanently retired from architecture when, in 1935, he returned to the scene. Before his death, he designed some of his most famous buildings including Fallingwater, regarded as one of the most beautiful homes ever built, and the Guggenheim Museum. Take a closer look at Frank Lloyd Wright and his creation of a wholly American style of architecture.

The first major presentation in decades of the visionary drawings of the artist-architect and master designer. Frank Lloyd Wright was an architect of vast and unprecedented vision, whose work is not only still admired by the critics and carefully studied by historians but is also widely beloved. Comfortable spaces, humanly scaled, with extraordinary attention to detail-as seen in a range of architectural forms-are at the center of Wright’s enduring appeal. This vision and attention is nowhere more evident than in the drawings. It has been said that had Wright left us only drawings, and not his buildings as well, he would still be celebrated for his brilliant artistry, and this is borne out here. Even more significant, and shown here as never before, are the magical first moments of invention and inspiration-Wright’s earliest sketches, some never before published-which offer unique insight into the mind of the master architect. Frank Lloyd Wright (1867-1959) is the most renowned and popular architect and designer in America. His buildings, including Fallingwater and New York's Guggenheim Museum, are iconic landmarks. Now you can create 14 of his best loved buildings using the art of kirigami (cutting and folding). Each project features step-by-step instructions and a template that you remove from the book. You follow the lines on the template, cutting and folding to make your own model. All you need is a craft knife, a cutting mat, and a ruler. Clear cutting tips help you with the tricky stages, while photos of the finished model show you the final design. To make things easier, the most intricate parts of the templates are pre-die-cut. Then simply display your finished model and admire your handiwork. Suitable for folding experts and beginners alike, Frank Lloyd Wright Paper Models is a must for Wright fans and architectural model enthusiasts.

Frank Lloyd Wright was the greatest American architect of the 20th century. During a long life he designed many of the most striking and iconic buildings in the USA - structures such as Fallingwater, a house poised above a waterfall in rural Pennsylvania, the Unity Temple, the USA's first all-concrete public building, and New York's amazing, spiral-shaped Guggenheim Museum. One of the most remarkable innovators in the history of architecture, Wright produced some of the most revolutionary buildings - breathtaking prairie houses, the Johnson Wax company headquarters with its Pyrex glazing and stunning mushroom columns, his own canvas-roofed desert home and office. Wright was a technological innovator too, pioneering inventions such as double-glazing, sound-absorbing office furniture, and prefabricated office partitions. But Wright did not pursue the new for its own sake. All his work is underpinned by a belief system: that buildings should be at one with their environment, that their form should grow from the needs of the client, and that site, floor plan, structural materials, and the use of the building should be in harmony. Wright called this set of ideas organic architecture, and both the philosophy and the buildings it produced are as inspiring now as they were when Wright was alive and working. This book

showcases fifty of Wright's most important projects. It covers buildings throughout his whole career, from the house he built for himself in Oak Park, Illinois in 1889 to the landmark structures of his final years like the Beth Shalom Synagogue and the Guggenheim Museum. The projects include a handful of influential buildings that are no longer standing, such as the masterly Larkin Company Building and the Imperial Hotel Tokyo, as a tribute to designs that still fascinate architects and others who follow the work of this inspiring American master. Brief opening and closing chapters outline the architect's life and describe his wide influence, which, with his emphasis on architecture and environment, is as relevant as ever today.

The Building Blocks series presents icons of modern architecture as interpreted by Ezra Stoller, whose photography has defined the way postwar architecture has been viewed by architects, historians, and the public at large. Taken just after the completion of each project, these photographs provide a unique historical record of the buildings in use, documenting people, fashions, and furnishings of the period.

Born in Wisconsin in 1867, Frank Lloyd Wright became obsessed with a set of building blocks his mother had given to him on his ninth birthday. He grew up to become the father of organic architecture and the greatest American architect of all time, having designed more than 1,100 buildings during his lifetime. These included private homes - such as the stunning Fallingwater, churches, temples, a hotel, and the world-famous Guggenheim Museum in New York City. When asked how he could create so many designs, he answered, "I can't get them out fast enough." Frank Lloyd Wright was a man ahead of his time who could barely keep up with his own ideas!
