He has previously held posts as Head of Business and Management and Head of Accounting and Law at University of Plymouth Business School.

This text presents an accessible introduction to techniques and applications of economic analysis and financial accounting as a method for approaching real-life business problems for managerial decision making in a logical manner. It focusses on the essential skills needed to formulate business policies that help gain a competitive edge in today's work environment. The book discusses the basic concepts, terminology, and methods that eventually allow students to interpret, analyse, and evaluate actual corporate financial statements. It covers the major areas of managerial economics and financial accounting such as the theory of the firm, the demand theory and forecasting, the production and cost theory and estimation, the market structure and pricing, investment analysis, accountancy, and different forms of business organisations. The book includes numerous examples, problems, self-assessment tests, as well as review questions at the end of each chapter to aid in working out solutions to business problems. The book will be particularly suitable for courses in Managerial Economics and Financial Accounting as part of an engineering degree education at undergraduate level where the students have no previous back-ground in economic and financial analysis. It will also be immensely useful for M.B.A., M.Com. and C.A. students, business executives, and administrators who need to learn the application of economic theory to realistic business situations.

'Financial Accounting for Decision Makers' presents the key concepts of accounting without going into too much unnecessary technical detail. The book is aimed as 'users' of accounting information, not 'preparers' of accounts.
