Art Savvy is a systematic approach to understanding art. It gives you methods to assess a design and really see what the artist was doing. Unlike chaotic art writings, terms are clearly defined, categorized, organized and illustrated. It is designed to answer questions like: What things will allow me to understand art? What are the basic elements? What is concept art? Can you "read" a work of abstract art? Visual literacy is the ability to interpret, negotiate, and make meaning from information presented in art work. Art Savvy gives you this. Defining Terms: Often art terms are not clearly defined, are used interchangeably or get mixed up with other types of analysis. For a thorough exploration of all aspects of art, photos of great works are referenced with color keyed notations to illustrate the 5 easy pieces: 1. Design Elements- Visual grammar, line, shape, form, mass etc. - definitions & how to see them. 2. Organization Principles- How elements are arranged and how this effects the concept. 3. Style- Relation to other groups of work and formulas for design. 4. Technique- How methods and materials are used to impact the concept. 5. Concept- What this piece about. What major themes and elements were used. Assessment techniques in each section of Art Savvy will train your eye to always see these 5 aspects of any artwork. It is not attempting judgments of relevance, philosophy, spiritual meanings and other ethereal aspects that a work may convey. This text poses the question: "What is the basic concept here?" but sticks to pure analysis and leaves all judgment to you and the experts. This field guide is a mini textbook on design principles that will let you understand art!

Modern political systems have been the products of liberal democracy, Marxism, or fascism. Dugin asserts a fourth ideology is needed to sift through the debris of the first three to look for elements that might be useful, but that remains innovative and unique in itself.

Modern x-ray data, available through online archives, are important for many astronomical topics. However, using these data requires specialized techniques and software. Written for graduate students, professional astronomers and researchers who want to start working in this field, this book is a practical guide to x-ray astronomy. The handbook begins with x-ray optics, basic detector physics and CCDs, before focussing on data analysis. It introduces the reduction and calibration of x-ray data, scientific analysis, archives, statistical issues

and the particular problems of highly extended sources. The book describes the main hardware used in x-ray astronomy, emphasizing the implications for data analysis. The concepts behind common x-ray astronomy data analysis software are explained. The appendices present reference material often required during data analysis.

Astrostatistical Challenges for the New Astronomy presents a collection of monographs authored by several of the disciplines leading astrostatisticians, i.e. by researchers from the fields of statistics and astronomy-astrophysics, who work in the statistical analysis of astronomical and cosmological data. Eight of the ten monographs are enhancements of presentations given by the authors as invited or special topics in astrostatistics papers at the ISI World Statistics Congress (2011, Dublin, Ireland). The opening chapter, by the editor, was adapted from an invited seminar given at Los Alamos National Laboratory (2011) on the history and current state of the discipline; the second chapter by Thomas Loredo was adapted from his invited presentation at the Statistical Challenges in Modern Astronomy V conference (2011, Pennsylvania State University), presenting insights regarding frequentist and Bayesian methods of estimation in astrostatistical analysis. The remaining monographs are research papers discussing various topics in astrostatistics. The monographs provide the reader with an excellent overview of the current state astrostatistical research, and offer guidelines as to subjects of future research. Lead authors for each chapter respectively include Joseph M. Hilbe (Jet Propulsion Laboratory and Arizona State Univ); Thomas J. Loredo (Dept of Astronomy, Cornell Univ); Stefano Andreon (INAF-Osservatorio Astronomico di Brera, Italy); Martin Kunz (Institute for Theoretical Physics, Univ of Geneva, Switz); Benjamin Wandel (Institut d'Astrophysique de Paris, Univ Pierre et Marie Curie, France); Roberto Trotta (Astrophysics Group, Dept of Physics, Imperial College London, UK); Phillip Gregory (Dept of Astronomy, Univ of British Columbia, Canada); Marc Henrion (Dept of Mathematics, Imperial College, London, UK); Asis Kumar Chattopadhyay (Dept of Statistics, Univ of Calcutta, India); Marisa March (Astrophysics Group, Dept of Physics, Imperial College, London, UK).

It is my pleasure to write the preface for Information Processing and Management. This book aims to bring together innovative results and new research trends in information processing, computer science and management engineering. If an information processing system is able to perform useful actions for an objective in a given domain, it is because the system knows something about that domain. The more knowledge it has, the more useful it can be to its users. Without that knowledge, the system itself is useless. In the information systems field, there is conceptual modeling for the activity that elicits and describes the general knowledge a particular information system needs to know. The main objective of conceptual modeling is to obtain that description, which is called a conceptual schema. Conceptual schemas are written in languages called conceptual modeling languages. Conceptual modeling is an important part of requirements engineering, the first and most important phase in the development of an information system.

How to think politics with and through the body? The invention of new modes of sensibility is vital to enriching and sustaining political engagements, labours and lives in the situated contexts of urban collectivity. The nanopolitics handbook investigates the neoliberal city and workplace, the politics of crisis and austerity, precarious lives and modes of collaboration - through bodies and their encounters. Starting from the exploration of what bodies can do - with curiosity, courage and care - nanopolitics is a proposal for producing new collective subjectivations. Based on the experiments and experiences of the nanopolitics group, this book proposes exercises, concepts and ideas as little maps and machines for action. Drawing on social movements, grassroots organizing, dance, theatre and bodywork, the reflections and practices here present strategies for navigating and reconfiguring the playing field of 'nanopolitics', activating its entanglement with the major politics of our time. Texts and exercises by: the nanopolitics group, esquizo-barcelona, David Vercauteren, Camila Mello and Fabiane Borges, Nelly Alfandari, Jorge Goia, Lottie Child, Carla Bottiglieri, Gabriella Alberti, Paolo Plotegher, Davyd Bodoun, Emma Dowling, Mara Ferreri, Manuela Zechner, Bue Rübner Hansen, Amit Rai, Anja Kanngieser, Lisa Burger, Irina Burger and Signe Lupnov.

This book is based partly on a lecture course given at the University of Trieste, but mostly on my own research experience in the field of galactic chemical evolution. The subject of galactic chemical evolution was started and developed by Beatrice Tinsley in the seventies and now is a flourishing subject. This book is dedicated to the chemical evolution of our Galaxy and aims at giving an up-to-date review of what we have learned since Tinsley's pioneering efforts. At the time of writing, in fact, books of this kind were not available with the exception of the excellent book by Bernard Pagel on "Nucleosynthesis and Chemical Evolution of Galaxies" (Cambridge University Press, 1997), and the subject of galactic chemical evolution has appeared only as short chapters in books devoted to other subjects. Therefore, I felt that a book of this kind could be useful. The book summarizes the observational facts which allow us to reconstruct the chemical history of our Galaxy, in particular the abundances in stars and in interstellar medium; in the last decade, a great deal of observational work, mostly abundance determinations in stars in the solar vicinity, has shed light on the production and distribution of chemical elements. Even more recently more abundance data have accumulated for external galaxies at both low and high redshift, thus providing precious information on the chemical evolution of different types of galaxies and on the early stages of galaxy evolution.

Called a "Technicolor Disney Fantasia" by journalist and author Graham Greene, Caodaism combines elements of Christianity, Buddhism, Confucianism, Islam, Taoism, with traditional native beliefs. Created in 1926 in Vietnam, Caodaism grew to become the third largest religion in Vietnam in only a few decades. This book explores Caodaism from its emergence in colonial Vietnam, to its establishment in the United States after the Vietnam War as a result of the Vietnamese diaspora; exploring the history, beliefs, rituals and customs of this little-known religion.

This unique atlas contains 248 charts of more than 300 of the brightest galaxies, each specially prepared to facilitate the search for supernovae. The comparison of these charts with the field seen in a telescope enables any extragalactic supernova to be identified immediately. The charts include 345 galaxies printed on translucent paper for use on a light-box, each one carrying a detailed explanation of the constellation in which the galaxy lies, special characteristics of the galaxy, observing instructions, and the maximum brightness for the supernovae in each galaxy, and the reference for the sequence. A handbook accompanies the charts, advising on their use, on how to make and record supernova discoveries, and reviewing the present understanding of supernovae. Published for an international market, these charts carry real potential for numerous discoveries of supernovae. Supernova Search Charts are a must for both serious observers and the growing number of deep sky enthusiasts around the world.
