This book details how safety (i.e. the absence of unacceptable risks) is ensured in areas where potentially explosive atmospheres (ATEX) can arise. The book also offers readers essential information on how to comply with the newest (April 2016) EU legislation when the presence of ATEX cannot be avoided. By presenting general guidance on issues arising out of the EU ATEX legislation – especially on zone classification, explosion risk assessment, equipment categorization, Ex-marking and related technical/chemical aspects – the book provides equipment manufacturers, responsible employers, and others with the essential knowledge they need to be able to understand the different – and often complicated – aspects of ATEX and to implement the necessary safety precautions. As such, it

specialists, and managers. This guide is a compilation of current best practices for measures to prevent dust explosions from occurring, and, if they do occur, to protect the plant and personnel from their destructive effects by applying the techniques of explosion containment, explosion suppression, and explosion venting. Included is new material on the containment and venting of dust explosions. This guide helps those responsible for the design, supply, and operation of process plants to comply with the provisions of health and safety legislation. Dust explosions can occur anywhere where combustible powders are handled, such as coal, wood, flour, starch, sugar, rubber, plastics, some metals, and
