a symposium of Articles compiled form data of the Central Institute of Balneology in Moscow

A Symposium of Articles

In this volume, the editor has assembled as many as possible of the meaningful and significant documents that contributed to man's determination to govern his conduct in inter-personal and international affairs. Most, it will be observed, reflect early attempts to establish some form of regulatory practice in dealing with specific problems of the times. Since the beginning, men have sought to establish rules and regulations to control their conduct within their particular societies. Some of the earliest attempts to regulate human behavior sprang from powerful, primitive religious influences that governed matters of ethics and morals. Examples of these types of ancient legal systems may be found in the Code of Hammurabi (Babylonia) and the Mosaic Code (Palestine). The first "pure" law can be traced back through classical history to Solon and Lycurgus, as well as to the Law of the Twelve Tables, which was the forerunner of Roman Law. Under the Emperor Justinian, Roman law became an elaborate, highly developed system of government having an immeasurable effect upon the evolution of modern Western law.

A Symposium of Articles Compiled from Data of the Central Institute of Balneology in Moscow

Statistical Abstract

In this comprehensive and latest statistical profile of the membership of the Communist Party during the first half-century of the Soviet regime, Professor Rigby analyzes the history of party recruitment and composition. Since the party makes vital contributions to the performance of several basic tasks within the Soviet political system, the author interprets his data mainly in functional terms. He identifies and evaluates the influence of these functional considerations on recruitment policies and on the changing patterns of membership, and determines the priorities assigned to different functions under changing circumstances. T.H. Rigby is Professor of Political Science, Research School of Social Science, Australian National University. Studies of the Russian Institute, Columbia University. Originally published in 1968. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Resorts and Ports draws together a group of case-studies which for the first time explore the changing relationships between port and resort activities in a cross-section of European maritime settings over three centuries. The book will interest academics in tourism studies, history, geography and cultural studies, as well as providing essential information and analysis for policy makers in coastal regeneration.
