Madeline Bernham, a 22 year old American beauty, is kidnapped by cruel and callous slavers and exported to the former Soviet Republic of Kalikastan. There she is converted into a ponygirl and condemned to satisfy the carnal desires of her captors. More importantly, deprived of all human rights, she begins her training to become an unwilling participant in the Kalikastani national sport, ponygirl racing. Hooded and gagged, her arms bound behind her, forever forbidden speech, Maddy struggles to cope with her new life as a mere beast subject to the whips and whims of her masters. Adult fiction. BDSM. As the Fall Season comes to a close, the lucky ponies that have made the grade prepare for their trips to the Fall Tournament. The unlucky, well, there is the lash and a return to the cruelties of the ponygirl barn. Grobgy and Drabik face a crisis as an injury threatens Maddy's participation in the tournament. Irkut shows Jake the pleasure of ponygirls in milk, and later, amidst the pre-tournament celebrations, Jake finds a new friend. Meanwhile, as far as Burnham is concerned Maddy and Jackie can wait a few years for their liberation as he furthers his plan to own the two fastest ponygirls in the country. Presents a history of such technology as X-rays, computerized tomography, magnetic resonance imaging, and ultrasound, and shows the effects of their use in literature, art, movies, and legal cases

“Ridley leaps from chromosome to chromosome in a handy summation of our ever increasing understanding of the roles that genes play in disease, behavior, sexual differences, and even intelligence. . . . He addresses not only the ethical quandaries faced by contemporary scientists but the reductionist danger in equating inheritability with inevitability.” — *The New Yorker*

The genome's been mapped. But what does it mean? Matt Ridley's *Genome* is the book that explains it all: what it is, how it works, and what it portends for the future

Arguably the most significant scientific discovery of the new century, the mapping of the twenty-three pairs of chromosomes that make up the human genome raises almost as many questions as it answers. Questions that will profoundly impact the way we think about disease, about longevity, and about free will. Questions that will affect the rest of your life. *Genome* offers extraordinary insight into the ramifications of this incredible breakthrough. By picking one newly discovered gene from each pair of chromosomes and telling its story, Matt Ridley recounts the history of our species and its ancestors from the dawn of life to the brink of future medicine. From Huntington's disease to cancer, from the applications of gene therapy to the horrors of eugenics, Ridley probes the scientific, philosophical, and moral issues arising as a result of the mapping of the genome. It will help you understand what this scientific milestone means for you, for your children, and for humankind.

South Africa has one of the highest levels of reported rape in the world, and legislative reform was seen as an essential step towards shifting the understanding of rape and its treatment within the criminal justice system. Since 1996 the activism has focused on the South African Law Reform Commission's investigation into sexual offences, and the parliamentary process, which culminated at the end of 2007 in the Criminal Law (Sexual Offences and Related Matters) Amendment Act. Drawing on a body of empirical, social and legal scholarship, this unique text charts the critical social and legal debates and jurisprudential developments that took place during the rape law reform process. *Should We Consent?* also provides important insights into the engagement of civil society with law reform and includes thoughtful and contemporary discussions on topics such as 'defining' rape, HIV, sexual offences against children and

An ethologist shows man to be a gene machine whose world is one of savage competition and deceit

22 year old Bryn Mawr graduate, Leslie Harrington, was thrilled when she was hired as personal assistant to Mr. Hassen Ben Moussa. Her knowledge of French and English was a perfect fit for his international trading business located in the small Tunisian town of Dar Al Jamah. Although warned not to go into the town unescorted, Leslie just can't resist exploring the exotic streets all alone. Her sojourn turns into a nightmare when she is arrested for immodesty and other trumped up charges. Her travail of subjugation takes her from the bowels of a hellish prison to the sands of a remote Tunisian oasis. Renamed Ghaniyah, the pretty one, she fights to preserve her identity while struggling to overcome the dark desire for submission she discovers deep within her soul.

Book One of the Klitzman Stories

Deliciously organized by the Seven Deadly Sins, here is a scintillating history of forbidden foods through the ages—and how these mouth-watering taboos have defined cultures around the world. From the lusciously tempting fruit in the Garden of Eden to the divine foie gras, Stewart Lee Allen engagingly illustrates that when a pleasure as primal as eating is criminalized, there is often an astonishing tale to tell. Among the foods thought to encourage Lust, the love apple (now known as the tomato) was thought to possess demonic spirits until the nineteenth century. The Gluttony “course” invites the reader to an ancient Roman dinner party where nearly every dish served—from poppy-crusting rodents to “Trojan Pork”—was considered a crime against the state. While the vice known as Sloth introduces the sad story of “The Lazy Root” (the potato), whose popularity in Ireland led British moralists to claim

that the Great Famine was God's way of punishing the Irish for eating a food that bred degeneracy and idleness. Filled with incredible food history and the author's travels to many of these exotic locales, In the Devil's Garden also features recipes like the matzo-ball stews outlawed by the Spanish Inquisition and the forbidden "chocolate champagnes" of the Aztecs. This is truly a delectable book that will be consumed by food lovers, culinary historians, amateur anthropologists, and armchair travelers alike. Bon appétit!

A Novel of Erotic Domination

This book will cover both the evidence for biofilms in many chronic bacterial infections as well as the problems facing these infections such as diagnostics and treatment regimes. A still increasing interest and emphasis on the sessile bacterial lifestyle biofilms has been seen since it was realized that that less than 0.1% of the total microbial biomass lives in the planktonic mode of growth. The term was coined in 1978 by Costerton et al. who defined the term biofilm for the first time. In 1993 the American Society for Microbiology (ASM) recognised that the biofilm mode of growth was relevant to microbiology. Lately many articles have

been published on the clinical implications of bacterial biofilms. Both original articles and reviews concerning the biofilm problem are available. Sex is as fascinating to scientists as it is to the rest of us. A vast pool of knowledge, therefore, has been gleaned from research into the nature of sex, from the contentious problem of why the wasteful reproductive process exists at all, to how individuals choose their mates and what traits they find attractive. This fascinating book explores those findings, and their implications for the sexual behaviour of our own species. It uses the Red Queen from 'Alice in Wonderland' – who has to run at full speed to stay where she is – as a metaphor for a whole range of sexual behaviours. The book was shortlisted for the 1994 Rhone-Poulenc Prize for Science Books. 'Animals and plants evolved sex to fend off parasitic infection. Now look where it has got us. Men want BMWs, power and money in order to pair-bond with women who are blonde, youthful and narrow-waisted ... a brilliant examination of the scientific debates on the hows and whys of sex and evolution' Independent.

In his latest book, Bainbridge combines an otherworldly journey through the central nervous system with an accessible and entertaining account of how the brain's anatomy has often misled anatomists about its function. Bainbridge uses the structure of the brain to set his book apart from the many volumes that focus on brain function.

This book addresses wound care in vascular surgery, neurosurgery and lower extremity ulcers, while also providing detailed information on the latest concepts in antimicrobial therapy. The book presents essential content on the assessment, care, measurement and repair of wounds, and describes important scientific aspects as well as current clinical techniques. Due to the various topics covered, the book offers a valuable resource not only for plastic surgeons, but also for neurosurgeons, vascular surgeons and all clinicians who are interested in learning about current antimicrobial agents and their use.

sojourn in the Hindu Kush, Harry looks forward to availing himself of the peculiar pleasures of Klitzman's Isle. But there is no rest for the weary. Klitzman wants Harry to learn first hand the methods and techniques of procuring candidates for his notorious brand. His first stop is the Caribbean island of Paliba, a resort with all the proper amenities run by Rene Diskare, one of Klitzman's unscrupulous lieutenants. Harry is invited to participate in the subjugation of the beautiful Marissa, who must pay with her body for her father's betrayal. Then Harry travels to New York where, under the guidance of the expert Draco, he is taught the ropes of enslavement. Deceit, betrayal, force are the tools of the trade. And for the victims, a one way ticket to sexual servitude. Drawing on trauma theory, genre theory, political theory, and theories of postmodernity, space, and temporality, *Literature After 9/11* suggests ways that these often distinct discourses can be recombined and set into dialogue with one another as it explores 9/11's effects on literature and literature's attempts to convey 9/11.

Judge, teacher, and writer Jean Sénat Fleury grew up in Saint-Marc, Haiti. He has been a trainer at the National Police Academy (1995-1996) and director of studies at the magistracy school in Pétion-Ville (2000-2004). He is the author of the books *Jean-Jacques Dessalines: Words Beyond the*

Grave, Toussaint Louverture: The Trial of the Slave Trafficking, and Adolf Hitler: Trial in Absentia in Nuremberg. Mr. Fleury immigrated to Boston in the United States in 2007. He obtained a master's degree in public administration and another degree in political science at Suffolk University. In 2014, he became director of the Caribbean Arts Gallery and a charitable organization called Art-For-Change. His latest book, *The Trial of Osama bin Laden*, is a narrative with historical facts, of course, but written in a novelistic style. This book is a book of information and training, a reference book that should be read as an educational tool on the attacks of September 11, 2001, while allowing a better understanding of the thought and philosophy of the leader of al-Qaeda. Through the play of fiction, the author hides behind the New York prosecutor to present the elements of the prosecution and asks the court to convict bin Laden, FBI one of the most wanted terrorists.

Although workplace design and management are gaining more and more attention from modern organizations, workplace research is still very fragmented and spread across multiple disciplines in academia. There are several books on the market related to workplaces, facility management (FM), and corporate real estate management (CREM) disciplines, but few open up a theoretical and practical discussion across multiple theories from different disciplines. Therefore, workplace

researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied. A lot of knowledge is lost between disciplines, and sadly, many insights do not reach workplace managers in practice. Therefore, this new book series is started by associate professor Rianne Appel-Meulenbroek (Eindhoven University of Technology, the Netherlands) and postdoc researcher Vitalija Danivska (Aalto University, Finland) as editors, published by Routledge. It is titled 'Transdisciplinary Workplace Research and Management' because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice. The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace-related issues in practice, such as knowledge worker productivity, office use, and more strategic management. In addition, the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice. This book series is relevant for workplace experts both in academia and industry. This second book in the series focuses on the role of workplace management in the organization and the tasks that workplace management needs to consider. The 18 theories that are presented in this book

and applied to workplace research discuss management aspects from the organization's perspective or dive deeper into issues related to people and/or building management. They all emphasize that workplace management is a complex matter that requires more strategic attention in order to add value for various stakeholders. The final chapter of the book describes a first step towards integrating the presented theories into an interdisciplinary framework for developing a grand workplace management theory.

The People, Place, and Space Reader brings together the writings of scholars, designers, and activists from a variety of fields to make sense of the makings and meanings of the world we inhabit. They help us to understand the relationships between people and the environment at all scales, and to consider the active roles individuals, groups, and social structures play in creating the environments in which people live, work, and play. These readings highlight the ways in which space and place are produced through large- and small-scale social, political, and economic practices, and offer new ways to think about how people engage the environment in multiple and diverse ways. Providing an essential resource for students of urban studies, geography, sociology and many other areas, this book brings together important but, till now, widely dispersed writings across many inter-related disciplines. Introductions from the editors precede each section; introducing the texts, demonstrating their significance, and outlining the key issues surrounding the topic. A companion website, PeoplePlaceSpace.org, extends the work even further by providing an on-going series of

This book has two goals: to educate healthcare professionals about the effect of identity-based adversity on the health of their LGBT patients, and to outline how providers can use the clinical encounter to promote LGBT patients' resilience in the face of adversity and thereby facilitate recovery. Toward this end, it addresses trauma in LGBT populations; factors that contribute to resilience both across the lifespan and in specific groups; and strategies for promoting resilience in clinical practice. Each chapter includes a case scenario with discussion questions and practice points that highlight critical clinical best practices. The editors and contributors are respected experts on the health of LGBT people, and the book will be a "first of its kind" resource for all clinicians who wish to become better educated about, and provide high quality healthcare to, their LGBT patients.

This comprehensive volume provides a broad overview of quality of life issues covering a wide geographical region: North America, Europe, parts of Africa, East Asia, and South Asia. Spread over more than 25 chapters, it includes the latest findings from these regions to provide a multidisciplinary account of the major dimensions of quality of life, and therefore has a vast scope. The volume is divided into four thematic parts: theoretical dimension; Demographic dimension; socio-cultural and economic dimensions; and urban and environment related dimensions. Extensive maps, diagrams and tables accompany the discussions and facilitate understanding.

The 21 theories discussed and applied to workplace design in this book address people's ability to do their job and thrive in relation to the office workplace. Some focus more on explaining why people behave the way they do (the psychosocial environment), while others take the physical and/or digital workplace quality as a starting point to explain employee outcomes such as health, satisfaction, and performance. They all explain different aspects for achieving employee-workplace alignment (EWA) and thereby ensuring employee thriving. The final chapter describes a first step towards integrating
