and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface

via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

Class 50s were nicknamed "Hoovers" by rail enthusiasts because of the distinctive sound made by the air-filters originally fitted (these proved unreliable, and were removed during mid-life refurbishment, but the "Hoover" nickname stuck). Once the electrification of the line from Crewe to Glasgow was completed, the locomotives were moved to services in the south west of England, primarily on the
