

Motor Mechanic Vehicle Question Papers

Automotive Technician Training is the definitive student textbook for automotive engineering. It covers all the theory and technology sections that students need to learn in order to pass levels 1, 2 and 3 automotive courses. It is recommended by the Institute of the Motor Industry and is ideal for courses and exams run by other awarding bodies. This revised edition overhauls the coverage of general skills and advanced diagnostic techniques. It also includes a new chapter about electric and hybrid vehicles and advanced driver-assistance systems, along with new online learning activities. Unlike current textbooks on the market, this takes a blended-learning approach, using interactive features that make learning more enjoyable and effective. It is ideal to use on its own but when linked with IMI eLearning online resources, it provides a comprehensive package that includes activities, video footage, assessments and further reading. Information and activities are set out in sequence to meet teacher and learner needs, as well as qualification requirements.

Book Summary On June 22, 1941 Adolf Hitler launched Operation Barbarossa, the ambitious plan to invade and conquer Russia. A year later the Germans were in desperate need of new tanks, airplanes, U-boats and heavy artillery to replace massive losses to the surging Russian army. With the value of German currency rapidly declining on the world financial market, the Nazis sought to use the fortune in diamonds confiscated from German and Polish Jews as collateral for huge loans from Swiss banks that would enable Germany to prolong the war for several years. However first the diamonds had to be collected, appraised and shipped to banks in Zurich. American and British agents vowed this never would happen. At any cost.
