Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

One of the challenges in protecting and displaying environmentally sensitive objects is preventing deterioration caused by the presence of oxygen. This volume describes the design and construction of an oxygen-free, hermetically sealed, display and storage case developed by the Getty Conservation Institute for the long-term protection of such objects. The case was originally designed as a collaborative project between the Egyptian Antiquities Organization and the GCI to conserve the Royal Mummy Collection at the Egyptian Museum in Cairo. Seven chapters cover the protection of cultural objects from environmental deterioration by reducing exposure to oxygen and by using inert gases for biodeterioration control. Also included are details on how the design and construction of the oxygen-free case has been adapted for other applications, specifically for the original documents of the Constitution of India in New Dehli and for the mummy collections at the Egyptian Museum and at the Museu Victor Balaguer in Vilanova i la Geltru, Spain. The Research in Conservation reference series presents the findings of research conducted by the Getty Conservation Institute and its individual and institutional research partners, as well as state-of-the-art reviews of conservation literature. Each volume covers a topic of current interest to conservators and conservation scientists.

As history repeats itself, a wrestling classic becomes even more relevant. In 1997, World Championship Wrestling was on top. It was the number-one pro wrestling company in the world, and the highest-rated show on cable television. Each week, fans tuned in to Monday Nitro, flocked to sold-out arenas, and carried home truckloads of WCW merchandise. It seemed the company could do no wrong. But by 2001, however, everything had bottomed out. The company — having lost a whopping 95% of its audience — was sold for next to nothing to Vince McMahon and World Wrestling Entertainment. WCW was laid to rest. What went wrong? This expanded and updated version of the bestselling Death of WCW takes readers through a detailed dissection of WCW's downfall, including even more commentary from the men who were there and serves as an object lesson — and dire warning — as WWE and TNA hurtle toward the 15th anniversary of WCW's demise.

In this much-anticipated book from acclaimed blogger Vicki Davis (Cool Cat Teacher), you'll learn the key shifts in writing instruction necessary to move students forward in today's world. Vicki describes how the elements of traditional writing are being reinvented with cloud-based tools. Instead of paper, note taking, filing cabinets, word processors, and group reports, we now have tools like ePaper, eBooks, social bookmarking, cloud syncing, infographics, and more. Vicki shows you how to select the right tool, set it up quickly, and prevent common mistakes. She also helps you teach digital citizenship and offers exciting ways to build writing communities where students love to learn. Special Features: • Essential questions at the start of each chapter to get you thinking about the big ideas • A chapter on each of the nine essential cloud-based tools--ePaper and eBooks; digital notebooks; social bookmarking; cloud syncing; cloud writing apps; blogging and microblogging; wikis and website builders; online graphic organizers and mind maps; and cartoons and infographics • A wide variety of practical ways to use each tool in the classroom • Alignments to the Common Core State Standards in writing • Level Up Learning--a special section at the end of each chapter to help you review, reflect on, and apply what you've learned • Writing tips to help you make the best use of the tools and avoid common pitfalls • A glossary of key terms discussed in the book • Useful appendices, including reproducible material for your classroom No matter what grade level you teach or how much tech experience you have, you will benefit from Vicki's compelling and practical ideas. As she emphasizes throughout this essential book, teaching with cloud-based tools has never been easier, more convenient, or more important than right now.

This volume of the IARC Monographs provides an assessment of the carcinogenicity of 18 chemicals present in industrial and consumer products or food (natural constituents, contaminants, or flavorings) or occurring as water-chlorination by-products. The compounds evaluated include the widely used plasticizer di(2-ethylhexyl) phthalate and the food contaminant 4-methylimidazole. In view of the limited agent-specific information available from epidemiological studies, the IARC Monographs Working Group relied mainly on carcinogenicity bioassays, and mechanistic and other relevant data to evaluate the carcinogenic hazards to humans exposed to these agents.

The past decades have seen the implementation of numerous programmes for the eradication of molluscs, due mainly to their involvement as vectors of human parasitic diseases. These programmes have involved the use of vast quantities of molluscicides and have resulted in many unwanted side effects. This volume of the International Encyclopedia of Pharmacology and Therapeutics brings together reviews on the major molluscicides in current use. Each review outlines all the physicochemical, toxicological and pharmacological properties, as well as detailing the effects on all the other major organisms that they are likely to come into contact with. In bringing together all this information in one volume, this book will enable the use of molluscicides to be better controlled and far more effective, whilst preventing the serious ecological damage often associated with such programmes.

The recent surge of interest in designing, validating, and implementing short-term tests for carcinogens has been spurred by the fairly convincing correlation be tween the carcinogenicity and mutagenicity of chemicals and physical agents and by the assumption that DNA alteration, mutations, and chromosome aberrations are somehow involved in neoplastic transformation. Moreover, it has been tacitly assumed that the mutagenic capacity alone of compounds would induce regulatory agencies to pass rules for their removal from the environment and would lead the public to avoid them. The actual response, however, is quite different. Governmental departments shy away from making any decisions on the basis of in vitro test systems. The public at large is becoming irritated by daily an nouncements that many of their cherished habits could adversely affect their health. Industry appears to feel threatened and may reduce its search for new beneficial chemicals. The reluctance to accept wholeheartedly the mutagenicity tests for the detection of carcinogens is partly due to uncertainty about the in volvement of mutations in neoplastic transformation, partly due to the present difficulty of extrapolating results from various endpoints obtained on numerous organisms to man, and partly due to a multitude of complex events that lead in vivo to the evolvement of benign or malignant tumors.
