The dramatic shifts in heartland regional economies in the U.S. and other advanced industrial countries have thrown into question the ability of capitalist development to produce permanent growth, economic well being, and balanced regional development. This book develops a theory that radically reconceptualizes the economic forces producing regional change and tests it empirically for a set of fifteen sectors in the U.S. It offers a pioneering approach which should enable planners and managers to better cope with baffling changes in the current economic viability of regions. Traditional theories of regional development have failed to account for innovation and longrun structural change. They have ignored the role of corporate strategy and the existence of market power. Markusen's "profit-cycle theory" provides a key to

understanding how, why, and when a region's leading industries undergo major changes. The theory is synthetic, building upon Schumpeterian and Marxist work on innovation and capitalist dynamics, upon the product cycle theories of business economists, and upon theories of oligopolistic behavior. Markusen argues that changing sources of profitability along an industry's evolutionary path will first concentrate and later disperse production geographically, setting in motion a methodically destabilizing process for regional economies. The profit-cycle theory is tested in depth against the steel sector's experience over a century, and against the experiences of sectors in different stages of development, ranging from innovative ones like semiconductors and computers, to mature and troubled sectors like automobiles, textiles, and lumber. The temporal and crosssectional data drawn

from the census of manufactures support the theory and its spatial hypotheses. In a final chapter Markusen explores the implications of the research for regional development. Ann Markusen is Assistant Professor, Department of City and Regional Planning, University of California, Berkeley.

James Friedman provides a thorough survey of oligopoly theory using numerical examples and careful verbal explanations to make the ideas clear and accessible. While the earlier ideas of Cournot, Hotelling, and Chamberlin are presented, the larger part of the book is devoted to the modern work on oligopoly that has resulted from the application of dynamic techniques and game theory to this area of economics. The book begins with static oligopoly theory. Cournot's model and its more recent elaborations are covered in the first substantive chapter. Then the Chamberlinian

analysis of product differentiation, spatial competition, and characteristics space is set out. The subsequent chapters on modern work deal with reaction functions, advertising, oligopoly with capital, entry, and oligopoly using noncooperative game theory. A large bibliography is provided.

Oligopolistic industries are communities of firms which are intensely aware of the high visibility of their price and product quality decisions and their impacts upon rivals' profits. This book adopts a novel approach to oligopolies that permits the combination of competition and cooperation, varying the weights given each in accordance with the structure and ethos of individual industries. It develops the theory of rivalrous consonance as a supplement to or substitute for game theory which seeks to develop a "general theory," incorporating a simultaneous determination of price and

quality variables for each firm within the context of multifirm interdependence. It presents methodologies and illustrates them to attain operational frameworks for the application of the theory of integrated competition to real world industries.

Marshall's Principles. By focusing on what is taken to be the representative business firm of the twentieth century - the large corporation or megacorp - the microeconomic model presented in the book reverses the usual assumptions of economic analysis. Instead of assuming the existence of firms with no control over prices, the book examines how the megacorp uses its pricing power to finance its own internal rate of growth. The result is a determinant model of how prices are set under the sort of oligopolistic conditions which prevail in most modern industries throughout the world.
