**In the United States,  
some populations suffer  
from far greater  
disparities in health  
than others. Those  
disparities are caused  
not only by fundamental  
differences in health  
status across segments  
of the population, but  
also because of  
inequities in factors  
that impact health  
status, so-called**

determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that

shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity,

Columbia was held during February 23-26 , 1999, in Nanaimo, British Columbia, Canada. The main goal of the workshop was to develop a realistic strategy to rehabilitate depleted northern (pinto) abalone, *Haliotis kamtschatkana*, stocks in British Columbia. The workshop was also meant to clarify the roles, expectations, and shared interests of many of the interest groups in British Columbia, emphasizing the key role in the rebuilding plan of local communities, including First Nations and non-native communities.

Canada? What forces have shaped its landscape and its people? To answer these questions, Brett McGillivray adopts primarily a thematic approach. He begins by giving a regional overview and introduction to geographic concepts and the physical processes that produced a spectacularly diverse landscape. He then tackles different themes, tracing the province's historical geography, offering detailed accounts of its economic geography, and discussing contemporary issues such as urbanization, economic development, and resource management. This fully revised edition is enhanced by updated figures, maps, and graphs and by new discussions of how globalization, climate change, and recession are influencing the province and its people.

The first comprehensive review of the current and future effects of climate change on the world ' s fisheries and aquaculture operations The first book of its kind, *Climate Change Impacts on Fisheries and Aquaculture* explores the impacts of climate change on global fisheries resources and on marine aquaculture. It also offers expert suggestions on possible adaptations to reduce those impacts. The world's climate is changing more rapidly than scientists had envisioned just a few years ago, and the potential impact of climate change on world food production is quite alarming. Nowhere is the sense of alarm more keenly felt than among those who study the warming of the world's oceans. Evidence of the dire effects of climate change on fisheries and fish farming has now mounted to such an

extent that the need for a book such as this has become urgent. A landmark publication devoted exclusively to how climate change is affecting and is likely to affect commercially vital fisheries and aquaculture operations globally, *Climate Change Impacts on Fisheries and Aquaculture* provides scientists and fishery managers with a summary of and reference point for information on the subject which has been gathered thus far. Covers an array of critical topics and assesses reviews of climate change impacts on fisheries and aquaculture from many countries, including Japan, Mexico, South Africa, Australia, Chile, US, UK, New Zealand, Pacific Islands, India and others. Features chapters on the effects of climate change on pelagic species, cod, lobsters, plankton, macroalgae,

The post-World War II science-based technological revolution inevitably found its way into almost all international expositions with displays on atomic energy, space exploration, transportation, communications, and computers. Major advancements in Cold War science and technology helped to shape new visions of utopian futures, the stock-in-trade of world's fairs. From the 1940s to the 1980s, expositions in the United States and around the world, from Brussels to Osaka to Brisbane, mirrored Cold War culture in a variety of ways, and also played an active role in shaping

it. This volume illustrates the cultural change and strain spurred by the Cold War, a disruptive period of scientific and technological progress that ignited growing concern over the impact of such progress on the environment and humanistic and spiritual values. Through the lens of world's fairs, contributors across disciplines offer an integrated exploration of the US-USSR rivalry from a global perspective and in the context of broader social and cultural phenomena—faith and religion, gender and family relations, urbanization and urban planning, fashion, modernization, and national identity—all of which were fundamentally reshaped by tensions and anxieties of the Atomic Age.
