This is a book of advice for students considering doctoral programs and doctoral students considering faculty life. It is framed as a glossary of about 150 terms that author Herb Childress, as a first-generation student, wishes that he had known and understood as he applied for and completed his PhD and went into the academic job market. The guide examines the practices of doctoral education and faculty life through entries that illuminate terms such as buyout, edited volume, and FERPA; so many things that most academics learned somewhere along the way and forget that others don't know. The alphabetical reference format enables readers to turn directly to the topic in question and find some borrowed wisdom. Each entry features a little storytelling, then some larger context, and leaves readers able to put on the mask of the capable scholar even though they feel like impostors. Every time they hear a term they feel they ought to know, it is here. The book is often funny as well, attempting to offer both encouragement and reality to students facing unconscionable odds as they search for safe harbor. As more than half of all college instructors are now adjuncts, the questions about an academic career are changing, and there are now fewer reliable answers and answers. Herb Childress's volume promises to be a trusted companion to many a graduate student, aspiring academic, and adjunct professor. "

Increasingly, modern medicine relies on so called traditional or ancient medical knowledge. Holistic practices such as adhering to proper diet, observing rules for appropriate behavior, and administering medical preparations are coupled with the latest technology and methods to treat the whole patient. In light of this trend, there much to be gained from understanding of one of the oldest medical systems still in existence. Tibetan Medicinal Plants provides you a detailed analysis of how Tibetan plants are used in this centuries old system. The book opens with a summary of Tibetan medicine and covers the various habitats in which the plants are found. The main part of this volume encompasses 60 monographs listed by the Tibetan plant name. Each monograph consists of several chapters addressing different topics related either to the Tibetan or the Western approach. Most of the monographs contain a description of the macroscopic and microscopic characteristics of the used plant part and anatomical features of 76 plants are provided. Each monograph presents an overview of the known chemical constituents and pharmacological properties of each plant and describes their use in Tibetan medicine. In contrast to other publications on Tibetan medicine, where translations of the Tibetan terms are given in other languages this book treats the Tibetan word as a technical term, keeps the Tibetan term and explains its meaning, lessening confusion by reducing the number of translations. Traditional Tibetan medicine has been in existence for centuries. Curative practices existed in the prebuddistic era, and the art of healing developed more than 2500 year ago. Tibetan Medicinal Plants provides a comprehensive overview of all plant types, thus making it easier to grasp the Tibetan concept. It gives you a comprehensive look at this centuries old science.

More people than ever are going to graduate school to seek a PhD these days. When they get there, they discover a bewildering environment: a rapid immersion in their discipline, a keen competition for resources, and uncertain options for their future, whether inside or outside of

academia. Life with a PhD can begin to resemble an unsolvable maze. In *Behind the Academic Curtain*, Frank F. Furstenberg offers a clear and user-friendly map to this maze. Drawing on decades of experience in academia, he provides a comprehensive, empirically grounded, and, most important of all, practical guide to academic life. While the greatest anxieties for PhD candidates and postgrads are often centered on getting that tenure-track dream job, each stage of an academic career poses a series of distinctive problems. Furstenberg divides these stages into five chapters that cover the entire trajectory of an academic life, including how to make use of a PhD outside of academia. From finding the right job to earning tenure, from managing teaching loads to conducting research, from working on committees to easing into retirement, he illuminates all the challenges and opportunities an academic can expect to encounter. Each chapter is designed for easy consultation, with copious signposts, helpful suggestions, and a bevy of questions that all academics should ask themselves throughout their career, whether at a major university, junior college, or a nonacademic organization. An honest and up-to-date portrayal of how this life really works, *Behind the Academic Curtain* is an essential companion for any scholar, at any stage of his or her career.

*Written in easy to follow language, the book presents cutting-edge agriculturally relevant plant biotechnologies and applications in a manner that is accessible to all. This book introduces the scope and method of plant biotechnologies and molecular breeding within the context of environmental analysis and assessment, a diminishing supply of productive arable land, scarce water resources and climate change. Authors who have studied how agro ecosystems have changed during the first decade and a half of commercial deployment review effects and stress needs that must be considered to make these tools sustainable. Meeting the challenges faced by today's U.S. doctoral humanities programs Despite the worldwide prestige of America's doctoral programs in the humanities, all is not well in this area of higher education and hasn't been for some time. The content of graduate programs has undergone major changes, while high rates of student attrition, long times to degree, and financial burdens prevail. In response, the Andrew W. Mellon Foundation in 1991 launched the Graduate Education Initiative (GEI), the largest effort ever undertaken to improve doctoral programs in the humanities and related social sciences. The only book to focus exclusively on the current state of doctoral education in the humanities, Educating Scholars reports on the GEI's success in reducing attrition and times to degree, the positive changes implemented by specific graduate programs, and the many challenges still to be addressed. Over a ten-year period, the Foundation devoted almost eighty-five million dollars through the GEI to provide support for doctoral programs and student aid in fifty-four departments at ten leading universities. The authors examine data that tracked the students in these departments and in control departments, as well as information gathered from a retrospective survey of students. They reveal that completion and attrition rates depend upon financial support, the quality of advising, clarity of program requirements, and each department's expectations regarding the dissertation. The authors consider who earns doctoral degrees, what affects students' chances of finishing their programs, and how successful they are at finding academic jobs. Answering some of the most important questions being raised about American doctoral programs today, Educating Scholars will interest all those concerned about our nation's intellectual future.*

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world. The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor is In, she has helped countless Ph.D.'s turn

themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: -When, where, and what to publish -Writing a foolproof grant application -Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right The Professor Is In addresses all of these issues, and many more.

"In this chapter, we introduce the idea of a new framework for research. Within our writing, we define our framework as a model for practice that can be used by people within the organization: these could be leaders, colleagues, researcher-practitioners, and evaluators to improve practice and solve problems in context. The book is about providing support for the thousands of people in organizations who are tasked with finding and solving problems, whether they are formal internal evaluators or not. Our book will enhance organizational capacity to understand and develop these frameworks. Our goal is to introduce this integrated framework in a way that you, our readers can see its connection to your settings, and apply the underlying shared positions and principles to your own work. Finally, the described model serves as the foundation upon which all other chapters' contents have been developed"--

This book is designed to introduce doctoral and graduate students to the process of conducting scientific research in the social sciences, business, education, public health, and related disciplines. It is a one-stop, comprehensive, and compact source for foundational concepts in behavioral research, and can serve as a stand-alone text or as a supplement to research readings in any doctoral seminar or research methods class. This book is currently used as a research text at universities on six continents and will shortly be available in nine different languages.
