Economics is often defined as the

science of choice or human action. But choice and action are essentially mental phenomena, an aspect rarely mentioned in the economics discourse. Choice, while not always a conscious or rational process, is held to involve beliefs, desires, intentions and arguably even free will. Actions

are often opposed to mere bodily movements, with the former being in some sense only understandable in reference to mental processes while the latter are understandable in entirely non-mental, physical terms. While philosophers have long concerned themselves with the
