investigation of Roma was in the past marginal to academic concerns because most of its practitioners were amateur folklorists interested in treating the Roma as paragons of a lost world and not as citizens of modern nation-states. Today the field is hemmed in by two different power fields: the emotionally understandable, though intellectually debilitating, concern to turn the plight of the Roma into a matter of human rights and the difficulty that academics experience in dealing with people who are not a people in the sense that nation states constitute and make peoples.

### Prosper in the Process Credit And The Two Sources From Which It Springs Web of Debt

With the publication of this stunningly illustrated account of the Hungarian avant-garde movement, an important missing link in early modern art can now be fully recognized. To such well-known names in the west as LAizslA<sup>3</sup> Moholy-Nagy and Andor Weininger can now be added the contributions of Lajos KassAik, SAindor Bortnyik, BALa Uitz, and a host of other painters whose significance has long been obscured. The nearly 200 illustrations, many in full color, together with essays by leading American and Hungarian scholars and a comprehensive bibliography and comparative chronology, make this a definitive

sourcebook that opens a new chapter in twentieth-century art. During the early twentieth century, central and eastern Europe provided fertile ground for major artistic developments. Hungarian painters, in particular, responded imaginatively and vigorously to the political and social changes leading up to and following World War I by "standing in the tempest" of political activism and attempting to redefine the role of art in society. Only in the past few years has it been possible once again to examine original works of art and to assess properly these painters' vital contribution. Steven A. When we first invited the group of distinguished scholars represented here to contribute to a new volume on Austrian economics, four themes were stressed: tensions, new directions, selectivity, and criticism. In this brief introduction we will explain why those themes were emphasized and thereby

shed light on our intentions and aspirations for the volume. The subtitle "Tensions and New Directions" indicates clearly the intent of the volume desired. If we take the 1871 publication of Carl Menger's Principles of Economics (Grundsätze der Volkswirtschaftslehre) as marking its birth, the Austrian tradition is now well over one hundred years old. The origins of the so-called "Austrian Revival" are more difficult to pinpoint precisely, but many would accept two decades as a reasonable estimate of its lifespan. In any case, since the mid-1970s several collections of articles written by Austrians have been published. The intent of these collections appeared to be to educate, persuade, and inspire various audiences. Uninformed readers needed to be told about the specifics

## File Type PDF Professor Antal E Fekete Articles

of the Austrian position, to be shown how it differed from and improved upon its rivals. The initiated needed to be reassured that their commitment to a novel program was justified. As such, much of the recent Austrian literature has consisted either of exegetical accounts of the views of past figures, or of critical assessments of the positions of alternative research programs in economics from an Austrian perspective.

Having won a two-third majority in Parliament at the 2010 elections, the Hungarian political party Fidesz removed many of the institutional obstacles of exerting power. Just like the party, the state itself was placed under the control of a single individual, who since then has applied the techniques used within his party to enforce submission and obedience

onto society as a whole. In a new approach the author characterizes the system as the 'organized over-world', the 'state employing mafia methods' and the 'adopted political family', applying these categories not as metaphors but elements of a coherent conceptual framework. The actions of the post-communist mafia state model are closely aligned with the interests of power and wealth concentrated in the hands of a small group of insiders. While the traditional mafia channeled wealth and economic players into its spheres of influence by means of direct coercion, the mafia state does the same by means of parliamentary legislation, legal prosecution, tax authority, police forces and secret service. The innovative conceptual framework of the book is important and timely not only for Hungary, but

also for other post-communist countries subjected to autocratic rules.

**Vegetable growers around the world only collect, on average, half of the yield they would obtain under optimal conditions, known as yield potential. It is estimated that 60–70% of the yield gap is attributable to abiotic factors such as salinity, drought, suboptimal temperatures, nutritional deficiencies, flooding, waterlogging, heavy metals contamination, adverse soil pH and organic pollutants, while the remaining 30–40% is due to biotic factors, especially soilborne pathogens, foliar pathogens, arthropods and weeds.
