Jason Polan is on a mission to draw every person in New York, from cab drivers to celebrities. He draws people eating at Taco Bell, admiring paintings at the Museum of Modern Art, and sleeping on the subway. With a foreword by Kristen Wiig, Every Person in New York, Volume 1 collects thousands of Polan's energetic drawings in one chunky book. As full as a phone book and as invigorating as a walk down a bustling New York street, this is a new kind of love letter to a beloved city and the people who live there.

Organized around the latest CACREP Standards, *Becoming a Multiculturally Competent Counselor* by Changming Duan and Chris Brown is a timely book that covers the core concepts, theories, and skills of multicultural and social justice counseling. With a focus on helping readers develop their multicultural professional identities, the authors conceptualize multicultural identity development as the foundation for comprehending the pervasive impact of social privilege and oppression and developing competencies to effectively work with the culturally diverse. Case illustrations, exercises, and an emphasis on reflective practice foster a true understanding and application of concepts. *Becoming a Multiculturally Competent Counselor* is part of the SAGE Counseling and Professional Identity Series, which targets specific competencies identified by CACREP (Council for Accreditation of Counseling and Related Educational Programs).

Reproductive choices are at once the most private and intimate decisions we make in our lives and undeniably also among the most public. Reproductive decision making takes place in a web of overlapping concerns – political and ideological, socio-economic, health and health care – all of which engage the public and involve strongly held opinions and attitudes about appropriate conduct on the part of individuals and the state. *Law, Policy and Reproductive Autonomy* examines the idea of reproductive autonomy, noting that in attempting to look closely at the contours of the concept, we begin to see some uncertainty about its meaning and legal implications – about how to understand reproductive autonomy and how to value it. Both mainstream and feminist literature about autonomy contribute valuable insights into the meaning and implications of reproductive autonomy. The developing feminist literature on relational autonomy provides a useful starting point for a contextualised conception of reproductive autonomy that creates the opportunity for meaningful exercise of reproductive choice. With a contextualised approach to reproductive autonomy as a backdrop, the book traces aspects of the regulation of reproduction in Canadian, English, US and Australian law and policy, arguing that not all reproductive decisions necessarily demand the same level of deference in law and policy, and making recommendations for reform.

This book is intended to be a comprehensive treatise of Guernsey trust law providing answers for practitioners advising on Guernsey trusts and trustees administering them. In particular, it provides a detailed analysis of the provisions of the Trusts (Guernsey) Law 2007 (as amended), a consideration of Guernsey trust cases as well as relevant cases in Jersey and in other jurisdictions, and analysis of the legal principles underpinning Guernsey trust law. Where there is no clear Guernsey authority on a particular point of law it gives a reasoned view, drawing on relevant legal principles, together with a broad assessment of the confidence of which the authors hold that view.

This book is above all an example of philosophical reflection in Africa, refuting traditional commonplaces concerning the continent. The texts comprising this volume disprove the misconceptions that Africa has never understood itself and has never contributed to the enrichment of knowledge, the development of rational thought, philosophy, the arts, science and technology as well as civilization. For the members of the recently established network Africa In-The-World, the contributions dealing with musical rhythms, dances and the continental humanist philosophy confirm that Africanisation is a process that continues unabated to this day. The multiple and significant African contributions are often difficult to see because they have long since been adopted and integrated into the heritage of humanity. Africa In-The-World is working toward the construction of a universal humanly - one conceived in terms of a 'give and take mentality.'

This looseleaf volume covers public financing from the initiation of the underwriting process through the closing, with a discussion of compliance with federal and state securities regulations. The reporting and continuous disclosure requirements of public company are presented in detail.

With advances in personalised medicine, the field of medical law is being challenged and transformed. The nature of the doctor-patient relationship is shifting as patients simultaneously become consumers. The regulation of emerging technologies is being thrown into question, and we face new challenges in the context of global pandemics. This volume identifies significant questions and issues underlying the philosophy of medical law. It brings together leading philosophers, legal theorists, and medical specialists to discuss these questions in two parts. The first part deals with key foundational theories, and the second addresses a variety of topical issues, including euthanasia, abortion, and medical privacy. The wide range of perspectives and topics on offer provide a vital introduction to the philosophical underpinnings of medical law.

In recent years much has happened to justify an examination of biological research in light of national security concerns. The destructive application of biotechnology research includes activities such as spreading common pathogens or transforming them into even more lethal forms. Policymakers and the scientific community at large must put forth a vigorous and immediate response to this challenge. This new book by the National Research Council recommends that the government expand existing regulations and rely on self-governance by scientists rather than adopt intrusive new policies. One key recommendation of the report is that the government should not attempt to regulate scientific publishing but should trust scientists and journals to screen their papers for security risks, a task some journals have already taken up. With biological information and tools widely distributed, regulating only U.S. researchers would have little effect. A new international Forum on Biosecurity should encourage the adoption of similar measures around the world. Seven types of risky studies would require approval by the Institutional Biosafety Committees that already oversee recombinant DNA research at some 400 U.S. institutions. These 400 experiments of concern include making an infectious agent more lethal and rendering vaccines powerless.

Could everything we know about fossil fuels be wrong? For decades, environmentalists have told us that using fossil fuels is a self-destructive addiction that will destroy our planet. Yet at the same time, by every measure of human well-being, from life expectancy to clean water to climate safety, life has been getting better and better. How can this be? The explanation, energy expert Alex Epstein argues in *The Moral Case for Fossil Fuels*, is that we usually hear only one side of the story. We're taught to think only of the negatives of fossil fuels, their risks and side effects, but not their positives—their unique ability to provide cheap, reliable energy for a world of seven billion people. And the moral significance of cheap, reliable energy, Epstein argues, is woefully underrated. Energy is our ability to improve every single aspect of life, whether economic or environmental. If we look at the big picture of fossil fuels compared with the alternatives, the overall impact of using fossil fuels is to make the world a far better place. We are morally obligated to use more fossil fuels for the sake of our economy and our environment. Drawing on original insights and cutting-edge research, Epstein argues that most of what we hear about fossil fuels is a myth. For instance . . . Myth: Fossil fuels are dirty. Truth: The environmental benefits of using fossil fuels far outweigh the risks. Fossil fuels don't take a naturally clean environment and make it dirty; they take a naturally dirty environment and make it clean. They don't take a naturally safe climate and make it dangerous; they take a naturally dangerous climate and make it ever safer. Myth: Fossil fuels are unsustainable, so we should strive to use "renewable" solar and wind. Truth: The sun and wind are intermittent, unreliable fuels that always need backup from a reliable source of energy—usually fossil fuels. There are huge amounts of fossil fuels left, and we have plenty of time to find something cheaper. Myth: Fossil fuels are hurting the developing world. Truth: Fossil fuels are the key to improving the quality of life for billions of people in the developing world. If we withhold them, access to clean water plummets, critical medical machines like incubators become impossible to operate, and life expectancy drops significantly. Calls to "get off fossil fuels" are calls to degrade the lives of innocent people who merely want the same opportunities we enjoy in the West. Taking everything into account, including the facts about climate change, Epstein argues that "fossil fuels are easy to misunderstand and demonize, but they are absolutely good to use. And they absolutely need to be championed. . . . Mankind's use of fossil fuels is supremely virtuous—because human life is the standard of value and because using fossil fuels transforms our environment to make it wonderful for human life."

This three-volume work examines all facets of the modern U.S. food system, including the nation's most important food and agriculture laws, the political forces that shape modern food policy, and the food production trends that are directly impacting the lives of every American family. • Examines a breadth of contemporary food controversies and offers diverse viewpoints on them, placing these perspectives fairly into a broader historical context • Presents a multidisciplinary approach to the subject of food that highlights related issues in transportation, business, diet and nutrition, public health, the environment, and public policy • Includes primary documents that illuminate important laws, policies, and perspectives on the environmental, public health, and economic impact of food • Provides readers with the latest information about food controversies as well as extensive resources for further study on major food controversies

This book addresses the involuntary and arbitrary displacement of individuals resulting from armed conflict and gross human rights violations. It shows that forcible displacement constitutes a serious violation of international law and of fundamental community interests. Armed Conflict and Forcible Displacement provides a critical legal analysis of the contemporary international framework, permeating forcible displacement in these circumstances and explores the rights that individuals possess with specific focus on the right not to be displaced and, where this fails, the right to return home and to receive property restitution. In doing so, this volume marries together different fields of international law and builds on the case studies of Cyprus, Colombia, Cambodia and Syria. While the case studies considered here are far from exhaustive, they are either little explored or present significant challenges due to the magnitude of displacement or contested international jurisprudence. Through this analysis, the volume exposes some of the legal challenges that individuals encounter in being protected from forcible displacement, as well as the legal obstacles that persist in ensuring the return of and the recovery of property by the displaced. It will be of interest to those interested in the fields of international law, human rights law, as well as conflict and war studies.

Learn to implement effective control measures for mutagenic impurities in pharmaceutical development In Mutagenic Impurities: Strategies for Identification and Control, distinguished chemist Andrew Teasdale delivers a thorough examination of mutagenic impurities and their impact on the pharmaceutical industry. The book incorporates the adoption of the ICH M7 guideline and focuses on mutagenic impurities from both a toxicological and analytical perspective. The editor has created a primary reference for any professional or student studying or working with mutagenic impurities and offers readers a definitive narrative of applicable guidelines and practical, tested solutions. It demonstrates the development of effective control measures, including chapters on the purge tool for risk assessment. The book incorporates a discussion of N-Nitrosamines which was arguably the largest mutagenic impurity issue ever faced by the pharmaceutical industry, resulting in the recall of Zantac and similar drugs resulting from N-Nitrosamine contamination. Readers will also benefit from the inclusion of: A thorough introduction to the development of regulatory guidelines for mutagenic and genotoxic impurities, including a historical perspective on the development of the EMEA guidelines and the ICH M7 guideline An exploration of in silico assessment of mutagenicity, including use of structure activity relationship evaluation as a tool in the evaluation of the genotoxic potential of impurities A discussion of a toxicological perspective on mutagenic impurities, including the assessment of mutagenicity and examining the mutagenic and carcinogenic potential of common synthetic reagents Perfect for chemists, analysts, and regulatory professionals, Mutagenic Impurities: Strategies for Identification and Control will also earn a place in the libraries of toxicologists and clinical safety scientists seeking a one-stop reference on the subject of mutagenic impurity identification and control.

'Sustainable development' a charade sold to an increasingly misled public? This book presents a wide-ranging, penetrating critique of sustainability and what it actually means. The author argues that despite the rhetoric of socially and environmentally sustainable development and the ever-increasing number of legislative environmental policies, the real issues such as consumption, population growth and equity are either sidestepped or manipulated in international policy and law. Analyzing the main areas of concern - economic growth, market structure, trade, aid, debt, security and sovereignty - he shows that the entire development structure and the underpinnings of the debate are leading down quite a different path to that intended by sustainability. Content analysis is one of the most important but complex research methodologies in the social sciences. In this thoroughly updated Second Edition of *The Content Analysis Guidebook*, author Kimberly Neundorff provides an accessible core text for upper-level undergraduates and graduate students across the social sciences. Comprising step-by-step instructions and practical advice, this text unravels the complicated aspects of content analysis.

In an era of climate change, the need to manage our water resources effectively for future generations has become an increasingly significant challenge. Indigenous management practices have been successfully used to manage inland water systems around the world for thousands of years, and Indigenous people have been calling for a greater role in the management of water resources. As First Peoples and as holders of important knowledge of sustainable water management practices, they regard themselves as custodians and rights holders, deserving of a meaningful role in decision-making. This book argues that a key (albeit not the only) means of ensuring appropriate participation in decision-making about water management is for such participation to be legislatively mandated. To this end, the book draws on case studies in Australia and New Zealand in order to elaborate the legislative tools necessary to ensure Indigenous participation, consultation and representation in the water management landscape.

How Latino activists brought down powerful Arizona sheriff Joe Arpaio Arizona Journalists Terry Greene Sterling and Jude Joffe-Block spent years chronicling the human consequences of Sheriff Joe Arpaio's relentless immigration enforcement in Maricopa County, Arizona. In Driving While Brown, they tell the tale of two opposing movements that redefined Arizona's political landscape—the restrictionist cause embraced by Arpaio and the Latino-led resistance that rose up against it. The story follows Arpaio, his supporters, and his adversaries, including Lydia Guzman, who gathered evidence for a racial-profiling lawsuit that took surprising turns. Guzman joined a coalition determined to stop Arpaio, reform unconstitutional policing, and fight for Latino civil rights. Driving While Brown details Arpaio's transformation—from "America's Toughest Sheriff," who forced inmates to wear pink underwear, into the nation's most feared immigration enforcer who ended up receiving President Donald Trump's first pardon. The authors immerse readers in the lives of people on both sides of the battle and uncover the deep roots of the Trump administration's immigration policies. The result of tireless investigative reporting, this powerful book provides critical insights into effective resistance to institutionalized racism and the community organizing that helped transform Arizona from a conservative stronghold into a battleground state.

A vast and diverse body of EU law addresses an enormous range of environmental matters. This book examines a number of areas of substantive EU environmental law, focusing on the striking preoccupation of EU environmental law with the structure of decision-making. It highlights the observation that environmental protection and environmental decision-making depend intimately on both detailed, specialised information about the physical state of the world, and on political judgments about values and priorities. It also explores the elaborate mechanisms that attempt to bring these distinctive decision-making resources into EU

environmental law in areas including industrial pollution, chemicals regulation, environmental assessment and climate change.

Thinking About Clinical Legal Education provides a range of philosophical and theoretical frameworks that can serve to enrich the teaching and practice of Clinical Legal Education (CLE). CLE has become an increasingly common feature of the curriculum in law schools across the globe. However, there has been relatively little attention paid to the theoretical and philosophical dimensions of this approach. This edited collection seeks to address this gap by bringing together contributions from the clinical community, to analyse their CLE practice using the framework of a clearly articulated philosophical or theoretical approach.

Contributions include insights from a range of jurisdictions including: Brazil, Canada, Croatia, Ethiopia, Israel, Spain, UK and the US. This book will be of interest to CLE academics and clinic supervisors, practitioners, and students.
