Spectral sequences are among the most elegant and powerful methods of computation in mathematics. This book describes some of the most important examples of spectral sequences and some of their most spectacular applications. The first part treats the algebraic foundations for this sort of homological algebra, starting from informal calculations. The heart of the text is an exposition of the classical examples from homotopy theory, with chapters on the Leray-Serre spectral sequence, the Eilenberg-Moore spectral sequence, the Adams spectral sequence, and, in this new edition, the Bockstein spectral sequence. The last part of the book treats applications throughout mathematics, including the theory of knots and links, algebraic geometry, differential geometry and algebra. This is an excellent reference for students and researchers in geometry, topology, and algebra.

Wanted: Dating coach to help hot nerd win back the woman of his dreams... Picture this - I'm ready to win back the love of my life, and I'm going big this time. We're talking

boom box, sing her name in the rain, let the whole damn neighborhood know I'm good and ready this time around. After all, if you're going to grand gesture the ever-loving hell out of a second chance, you need to pull out all the stops. There's only one little problem. My college girlfriend isn't the one who shows up when I play my "I'll do anything to win you back" tune. The woman who flings open the second-floor window tells me my ex doesn't live here anymore. But she'll help me win her back. Anything for romance, anything for a guy so willing to go big for love. And that's what I want at first. Until I get to know my new "romance coach" and discover she's funny, clever, and keeps me on my toes. And boy, do I ever need that. Now I don't want to win anyone else's heart. I want the woman who's been helping me all along. Trouble is - she thinks I'm in love with someone else, and when we take off on a road trip, everything I think I know about women is about to be unzipped and turned inside out. *Unzipped is a standalone spinoff in the Lucky in Love series of standalones*

The National Household Education Survey (NHES) is a random digit dial telephone survey of households developed by the National Center for Education Statistics. It has been conducted in 1991, 1993, 1995, and 1996, with varying components each year. The NHES 91/93/95/96 CD-ROM contains an electronic codebook (ECB) program that, after being installed on a personal computer, allows the user to examine the variables in each of the NHES data sets as well as create Statistical Analysis System (SAS) or Statistical Package for the Social Sciences (SPSS) programs to generate an extract data file for any of the NHES data files on the CD-ROM. The files include the 1991 and 1995 Adult Education files, the primary and preprimary education files from 1991, the school readiness and school safety files from 1993, the 1995 early childhood program participation file, and the 1996 household and

library, parent and family involvement in education and civic involvement, youth civic involvement, and adult civic involvement files. The ECB is a DOS-based program for IBM-compatible personal computers. Sections describe its contents and use, focusing on what can be done with the ECB and how to do it. Emphasis is on extracting information from the files. Eight appendixes provide specific use information and samples, including SAS and SPSS samples. (SLD)
