The field of plant taxonomy has transformed rapidly over the past fifteen years, especially with regard to improvements in cladistic analysis and the use of new molecular data. The second edition of this popular resource reflects these far-reaching and dramatic developments with more than 3,000 new references and many new figures. Synthesizing current research and trends, Plant Taxonomy now provides the most up-to-date overview in relation to monographic, biodiversity, and evolutionary studies, and continues to be an essential resource for students and scholars. This text is divided into two parts: Part 1 explains the principles of taxonomy, including the importance of systematics, characters, concepts of categories, and different approaches to biological classification. Part 2 outlines the different types of data used in plant taxonomic studies with suggestions on their efficacy and modes of presentation and evaluation. This section also lists the equipment and financial resources required for gathering each type of data. References throughout the book illuminate the historical development of taxonomic terminology and philosophy while citations

offer further study. Plant Taxonomy is also a personal story of what it means to be a practicing taxonomist and to view these activities within a meaningful conceptual framework. Tod F. Stuessy recalls the progression of his own work and shares his belief that the most creative taxonomy is done by those who have a strong conceptual grasp of their own research.

Pre-Columbian Trans-Oceanic Contact examines the discovery and settlement of The New World hundreds and even thousands of years before Christopher Columbus was born.

A Lady Trader in the Transvaal presents the South African adventures of Sarah Heckford, a once famous but now forgotten Anglo-Irish gentlewoman. After treking to the Transvaal in 1878, this intrepid woman served as governess, doctor, builder, nurse, and farmer. When her farm failed, she broke through the barriers of gender and class to make her fortune as a smous or peddler —trading with the Africans and Afrikaners of the remote bush-veldt. Caught up in the Anglo-Boer War of 1879–1880, she survived the hundred-day siege of Pretoria only to find the British dishonored and herself financially ruined.

Many research projects involve analyzing sets of texts from the social web or elsewhere to get insights into issues, opinions, interests, news discussions, or communication styles. For example, many studies have investigated reactions to Covid-19 social distancing restrictions, conspiracy theories, and anti-vaccine sentiment on social media. This book describes word association thematic analysis, a mixed methods strategy to identify themes within a collection of social web or other texts. It identifies these themes in the differences between subsets of the texts, including female vs. male vs. nonbinary, older vs. newer, country A vs. country B, positive vs. negative sentiment, high scoring vs. low scoring, or subtopic A vs. subtopic B. It can also be used to identify the differences between a topic-focused collection of texts and a reference collection. The method starts by automatically finding words that are statistically significantly more common in one subset than another, then identifies the context of these words and groups them into themes. It is supported by the free Windows-based software Mozdeh for data collection or importing and for the quantitative analysis stages. This book explains the word association thematic analysis method, with examples, and gives practical advice for using it. It is primarily intended for social media researchers and students, although the method is applicable to any collection of short texts.

The BBC America series Orphan Black (2013-2017) won acclaim for its compelling writing, resonant themes and innovative special effects. And for the bravura acting of Tatiana Maslany, who plays an ever-growing number of clones drawn into an increasingly dangerous world of cutting-edge science, corporate espionage, military secrets and religious fanaticism. Heir to pioneering shows centered on strong female characters, such as Buffy the Vampire Slayer, Dollhouse, Lost and Xena: Warrior Princess, Orphan Black models the current Golden Age of serial-form storytelling, with themes of identity, bodily autonomy, gender and sexuality playing against corporate greed and its co-opting of science. This collection of new essays analyzes the diverse clone characters and the series, covering topics including motherhood, surveillance culture, mythology, eugenics, and special effects, as well as the science behind cloning.

Learning a complex new language is no easy task, especially when it's an object-oriented computer programming language like Java. Your brain doesn't always want to take in the dry, technical stuff you're forced to study. Your brain craves novelty. Head First Java combines puzzles, strong visuals, mysteries, and soul-searching interviews with famous Java objects to engage you in many different ways. Despite its playful appearance, Head First Java is serious: a complete introduction to object-oriented programming and Java. Its unique approach not only shows you what you need to know about Java syntax, it teaches you to think like a Java programmer. You'll learn everything from the fundamentals to advanced topics, including threads, network sockets, and distributed programming with RMI. The second edition focuses on Java 5.0, a major update to the platform, with deep, code-level changes.--From publisher description.

Developing a Loving Pedagogy in the Early Years

*** An absolute must read on the topic of the Middle East! * A profound catalyst for the timely questions of the human heart! * A critical call for the deepest of personal introspection and proactive response! Sarah's Promise is an extraordinary odyssey of the inner and outer exploration of the questions of the ages and the immediate crucial decisions facing the human race through the conflict in the Middle East. Dr. West shares a profoundly intimate, heart-rending and intensely frank view of life as a peaceworker in a region of timeless wisdom and ruthless conflict. She has journeyed extensively throughout the Middle East region, giving her a visceral, first-hand experience of the issues, influences and unique challenges that make this part of the world a global hot spot. The magnitude of Devra's inner exploration, in the midst of orchestrating an international peace effort, demands that a personal quest be engaged on the part of the reader and is sure to inspire many**

questions of far-reaching impact for all who enter her world of deep contemplation, and passionate desire to make a difference. The first in a series, Sarah's Promise is a "must read" for anyone wanting to gain greater insight into the polarized nature of peace and conflict in Israel and Palestine and the critical planetary dilemma that must be addressed by all responsible world citizens.

Digital Customer Service is the new standard for creating a 5-star customer experience As much as technology has improved our lives, for many people customer service experiences remain unnecessarily frustrating. But the advent of Digital Customer Service (DCS) promises to make these interactions seamless and effortless by creating experiences that occur entirely on a customer's own screen, even in situations where it is preferable to speak to an agent. Digital Customer Service: Transforming Customer Experience for an On-Screen World traces the evolution of customer service—as well as the evolution of customer expectations and the underlying psychology that drives customer behavior - from the days of the first call centers in the 1980s all the way to today's digital world. Written for Customer

Service and Customer Experience leaders as well as C-suite executives (CEOs, CFOs, CIOs), Digital Customer Service helps business leaders balance three critical priorities: Creating an excellent experience for customers that increases customer loyalty and profitability Driving down the cost of Customer Service/Support interactions, while increasing revenue through Sales interactions Moving quickly toward the goal of "digital transformation" We have discovered—in our research and our first-hand experience—that when companies commit to achieving true Digital Customer Service, they can make significant progress toward all three of these goals at once. Digital Customer Service provides the roadmap for how your company can get there. And when you do, who wins? EVERYONE.

"A beautifully crafted scare-fest . . . heaven for techno-thriller fans."—People (Page-turner of the Week) It's like nothing anyone has ever seen before. Utopia is the brand-new frontier of theme parks, a fantastic collection of Worlds each so authentic it takes the average visitor's breath away. Teeming with cutting-edge holographic and robotic technology, it has captured the nation's imagination. But it has also attracted a

group of ruthless criminals. After infiltrating the park and its computer systems, their leader—calling himself John Doe—sets the parameters: If their shocking demands are met, none of the visitors to the park that day will be harmed; if not, then all hell will rain down. Dr. Andrew Warne, the brilliant engineer who designed much of the park's robotics, suddenly finds himself in a role he never imagined—trying to save the lives of thousands of innocent people . . . one of whom just happens to be his daughter. Praise for Lethal Velocity "Terrific . . . a sensational piece of popular entertainment . . . [Lincoln] Child has created a fictional wonderland that is both high-tech and nostalgic. . . . If you are looking for intelligent fun, it doesn't get much better than this."—The Washington Post Book World "[A] whiz-bang plot . . . springs to life from the opening pages . . . Child does an outstanding job of depicting the workings of this fantastic playground."—San Francisco Chronicle "A riveting read . . . part mystery, part science-fiction, and all page-turner."—Roanoke Times Previously published as Utopia Digital Customer Service

What would cause a seemingly ordinary man to destroy an entire city? What would have to happen to push someone so far off the edge, that right and wrong are no longer a consideration? Coleman has spent his

entire life creating the very things he would one day use to destroy Cytos, but it wasn't always that way. They weren't always meant for evil... Find out where it all began. Find out how a monster was born. An expert on mind considers how animals and smart machines measure up to human intelligence. Octopuses can open jars to get food, and chimpanzees can plan for the future. An IBM computer named Watson won on Jeopardy! and Alexa knows our favorite songs. But do animals and smart machines really have intelligence comparable to that of humans? In Bots and Beasts, Paul Thagard looks at how computers ("bots") and animals measure up to the minds of people, offering the first systematic comparison of intelligence across machines, animals, and humans. Thagard explains that human intelligence is more than IQ and encompasses such features as problem solving, decision making, and creativity. He uses a checklist of twenty characteristics of human intelligence to evaluate the smartest machines--including Watson, AlphaZero, virtual assistants, and self-driving cars--and the most intelligent animals--including octopuses, dogs, dolphins, bees, and chimpanzees. Neither a romantic enthusiast for nonhuman intelligence nor a skeptical killjoy, Thagard

offers a clear assessment. He discusses hotly debated issues about animal intelligence concerning bacterial consciousness, fish pain, and dog jealousy. He evaluates the plausibility of achieving human-level artificial intelligence and considers ethical and policy issues. A full appreciation of human minds reveals that current bots and beasts fall far short of human capabilities.

The first and only of its kind, this book is a straightforward listing of more than 25,000 trivia facts from 2,498 TV series aired between 1947 and 2019. Organized by topic, trivia facts include everything from home addresses of characters, to names of pets and jobs that characters worked. Featured programs include popular shows like The Big Bang Theory and Friends and more obscure programs like A Date with Judy or My Friend Irma. Included is an alphabetical program index that lists trivia facts grouped by series.

Social media is full of dead people. Nobody knows precisely how many Facebook profiles belong to dead users but in 2012 the figure was estimated at 30 million. What do we do with all these digital souls? Can we simply delete them, or do they have a right to persist? Philosophers have been almost entirely silent on the topic, despite their perennial focus on death as a unique dimension of human existence. Until now. Drawing on ongoing philosophical debates, Digital Souls claims that the digital dead are objects that should be treated with loving regard and that we have a moral duty towards. Modern technology helps them to persist in various ways, while also making them vulnerable to new forms of exploitation and abuse. This provocative book explores a range of questions about the nature of death, identity, grief, the moral status of digital remains and the threat posed by AI-driven avatars of dead people. In the digital era, it seems we must all re-learn how to live with the dead.

Sarah's Quandary By: Edward N. Magi Jr. In the fourth edition of this gifted law enforcer, Sarah's talents and techniques are magnified. Sarah has a special ability to obtain information from reluctant people, to unlock clues, and get to the truth. Her outright tenacity enables Sarah and her SIU team to stop assassins and successfully pursue thieves, murderers, kidnappers, and terrorists, all while considering and reconsidering her life choices.

Feminist Speculations and the Practice of Research-Creation provides a unique introduction to research-creation as a methodology, and a series of exemplifications of research-creation projects in practice with a range of participants including secondary school students, artists, and academics. In conversation with leading scholars in the field, the book outlines research-creation as transdisciplinary praxis embedded in queer-feminist anti-racist politics. It provides a methodological overview of how the author approaches research-creation projects at the intersection of literary arts, textuality, artistic practice, and pedagogies of writing, drawing on concepts related to the feminist materialisms, including speculative thought, affect theories, queer theory, and process philosophy. Further, it troubles representationalism in qualitative research in the arts. The book demonstrates how research-creation operates through the making of or curating of art or cultural productions as an integral part of the research process. The exemplification chapters engage with the author's research-creation events with diverse participants all focused on text-based artistic projects including narratives, inter-textual marginalia art, postcards, songs, and computer-generated scripts. The book is aimed at graduate students and early career researchers who mobilize the literary arts, theory, and research in transdisciplinary settings.

"Claudia Lin is looking at a cliched post-college future as a chronically underemployed English major--much to the consternation of her mother, who wants her to settle down and start dating a nice Chinese boy already; her brother, who pushes her to follow in his model-minority footsteps; and her sister, who can't get over Claudia's privileged place in their mother's affections. But Claudia is used to keeping secrets from her family. Such as the fact that she prefers girls--and that she's embarking on an unsuitable but supremely fun career. Veracity, a two-and-a-half-person detective agency that operates out of a Manhattan townhouse and verifies people's online dating personas, has recruited Claudia via an online murder mystery game. A lifelong reader of mystery novels, Claudia takes to her new job sniffing out cheaters and catfishers like a latter-day lovechild of Elizabeth Bennet and Sherlock Holmes. But when one of her very first clients turns up dead, Claudia breaks with Veracity's protocols to investigate what happened, unconvinced by the story everyone else believes. The deeper she digs, the more she discovers that nothing--her client, the death, the dating platforms that claim to know us better than we know ourselves, Veracity, even her own family--may be as it seems. Part literary mystery, part family story, The Verifiers is a witty and incisive examination of how technology shapes our choices, and what role romantic love plays in the digital age"--

This explosive, up-close view of Sarah Palin comes from an inner-circle confidant who shares surprising information about how Sarah dealt with staff and perceived "enemies," and the discrepancy between what she said and what she did.
