In 2001, Kenneth

Deffeyes made a

grim prediction:

world oil

production would

within the next decade--and there was nothing anyone could do to stop it.

Deffeyes's claim echoed the work of geophysicist M. King Hubbert, who in 1956 predicted that U.S. oil production would reach its

highest level in
the early 1970s.

Though roundly
criticized by oil
experts and
economists,

Hubbert's
prediction came
true in 1970. In
this updated
edition of

Hubbert's Peak,
Deffeyes explains

the crisis that few
now deny we are
headed toward.

Using geology and
economics, he
shows how
everything from
the rising price of
groceries to the
subprime
mortgage crisis
has been
exacerbated by

the shrinking supply--and growing price--of oil. Although there is no easy solution to these problems, Deffeyes argues that the first step is understanding the trouble that we are in.
