While public-private partnerships in education in the United States have received a lot of attention, research on such partnerships elsewhere has been limited--even though such partnerships have been steadily gaining prominence, particularly in developing countries. Aiming to fill this gap, this book presents fresh, technically sound empirical evidence on the effectiveness and cost of various public-private education partnerships from around the world, including voucher programs and faith-based schools. The evidence on the impact in terms of school performance, targeting, and cost of public-priv.

This book presents an exceptional collection of 11 articles on contemporary research studies that address current and critical issues of researches, theories and practices in the fields of mathematics education at various levels from primary to tertiary education. In addition, the book covers various innovative research studies from both local and abroad such as cognitive diagnostic assessment (CDA) and assessment for learning (AfL), teaching and learning of mathematics using the dynamic geometry software (DGS), action-process-object-schema (APOS) theory and relationship mapping and inverse (RMI) principle, as well as mathematics lesson structure (MLS) and collaborative lesson research (CLR). The contents of this book should be of interest to both national and international researchers and scholars, particularly mathematics educators, mathematics education researchers, teacher trainers, university students, teachers, curriculum planners, as well as policymakers. Today new ways of thinking about learning call for new ways for monitoring learning. Reform in School Mathematics builds from the vision that assessment can become the bridge for instructional activity, accountability, and teacher development. It places teachers in key roles while developing the theme that we cannot reform the way in which school mathematics is taught without radically reforming the ways the effects of that teaching are monitored. Among others, this volume addresses the issues of the specification of performance standards, the development of authentic tasks, the measure of status and growth or a combination, the development of psychometric models, and the development of scoring rubrics. The new models proposed in this book give teachers a wealth of nontraditional assessment strategies and concrete ways to obtain measures of both group and individual differences in growth.

These transcripts provide testimony regarding the reauthorization of the Elementary and Secondary Education Act (ESEA) of 1965. The first part of the transcripts presents testimony from members of national educational associations urging legislators to show a stronger commitment to helping education professionals improve their skills and to adopt a new research project to improve learning for special needs children. The major portion of the transcripts contains statements from school administrators, other experts from educational agencies and delivery systems, and legislators concerning: (1) the role of ESEA programs in school reform and the improvement of K-12 education; (2) the reauthorization and improvement of Chapters 1 and 2; (3) the Dwight D. Eisenhower Mathematics and Science Education program and techniques of successfully integrating technology into schools; (4) the need for coordinated education, health, and social services as a means of better serving young people; (5) recommendations for improving women's equity in education; and (6) issues related to the education programs for Native Americans, Alaskan Natives, and Native Hawaiians.
