Mrs. Ford leads a privileged life. From her Blenheim spaniels to her cottage on the coast of Watch Hill, Rhode Island, she carefully curates her world. Hair in place, house in place, life in place, Susan Ford keeps it under control. Early one morning in the summer of 2014, the past pays a call to collect. The FBI arrives to question her about a man from Iraq—a Chaldean Christian from Mosul—where ISIS has just seized control. Sammy Fakhouri, they say, is his name and they have taken him into custody, picked up on his way to her house. Back in the summer of 1979, on the outskirts of a declining Detroit, college coed Susan meets charismatic and reckless Annie. They are an unlikely pair of friends but they each see something in the other—something they'd like to possess. Studious Susan is a moth to the flame that is Annie. Yet, it is dazzling Annie who senses that Susan will be the one who makes it out of Detroit. Together, the girls navigate the minefields of a down-market disco where they work their summer jobs. It's a world filled with pretty girls and powerful men, some of whom—like Sammy Fakhouri—happen to be Iraqi Chaldeans. What happened in that summer of 1979 when Susan and Annie met? Why is Sammy looking for Susan all these years later? And why is Mrs. Ford lying?

Slow sand filtration is typically cited as being the first "engineered" process in drinking-water treatment. Proven modifications to the conventional slow sand filtration process, the awareness of induced biological activity in riverbank filtration systems, and the growth of oxidant-induced biological removals in more rapid-rate filters (e.g. biological activated carbon) demonstrate the renaissance of biofiltration as a treatment process that remains viable for both small, rural communities and major cities. Biofiltration is expected to become even more common in the future as efforts intensify to decrease the presence of disease-causing microorganisms and disinfection by-products in drinking water, to minimize microbial regrowth potential in distribution systems, and where operator skill levels are emphasized. Recent Progress in Slow Sand and Alternative Biofiltration

Processes provides a state-of-the-art assessment on a variety of biofiltration systems from studies conducted around the world. The authors collectively represent a perspective from 23 countries and include academics, biofiltration system users, designers, and manufacturers. It provides an up-to-date perspective on the physical, chemical, biological, and operational factors affecting the performance of slow sand filtration (SSF), riverbank filtration (RBF), soil-aquifer treatment (SAT), and biological activated carbon (BAC) processes. The main themes are: comparable overviews of biofiltration systems; slow sand filtration process behavior, treatment performance and process developments; and alternative biofiltration process behaviors, treatment performances, and process developments.

Precision Agriculture is becoming ever more relevant as the agricultural industry struggles to come to terms with the environment, economics, traceability, vehicle guidance and crop management. Whilst some benefits have proved elusive, others contribute positively to today's agriculture. Research continues to be necessary and needs to be reported and disseminated to a wide audience. These proceedings contain the reviewed papers from the 7th European Conference on Precision Agriculture. The papers reflect the wide range of disciplines that impinge upon precision agriculture including remote sensing, plant disease and weed detection, yield monitoring, soil sensing, geo statistics and path planning, regional and crop modelling, cooperation and guidance of robots, precision application, ICT in precision agriculture, future farming and European relevance for precision agriculture. The broad range of research topics reported is a valuable resource for researchers, advisors, teachers and professionals in agriculture. Also note that the reviewed papers from the 4th European Conference on Precision Livestock Farming are presented in a companion publication.

Wine, made from the leaves of the Camellia sinesis plant, is the second most consumed beverage worldwide after water. Accumulating evidence from cellular, animal, epidemiological and clinical studies have linked tea consumption to various health benefits, such as chemoprevention of cancers, chronic inflammation, heart and liver diseases, diabetes, neurodegenerative diseases, etc. Although such health benefits have not been consistently observed in some intervention trials, positive results from clinical trials have provided direct evidence supporting the cancer-protective effect of green tea. In addition, numerous mechanisms of action have been suggested to contribute to tea ' s disease-preventive effects.

Furthermore, effects of the processing and storage of tea, as well as additives on tea ' s properties have been investigated.

Prepare yourself for a journey through the world of Patton Oswalt, one of the most creative, insightful, and hysterical voices on the entertainment scene today. Widely known for his roles in the films Big Fan and Rataouille, as well as the television hit The King of Queens, Patton Oswalt—a staple of Comedy Central—has been amusing audiences for decades. Now, with Zombie Spaceship Wasteland, he offers a fascinating look into his most unusual, and lovable, mindspace. Oswalt combines memoir with uproarious humor, from snow forts to Dungeons & Dragons to gifts from Grandma that had to be explained. He remembers his teen summers spent working in a movie Cineplex and his early years doing stand-up. Readers are also treated to several graphic elements, including a vampire tale for the rest of us and some greeting cards with a special touch. Then there ' s the book ' s centerpiece, which posits that before all young creative minds have anything to write about, they will home in on one of three story lines: zombies, spaceships, or wastelands. Oswalt chose wastelands, and ever since he has been mining our society ' s wasteland for perversion and excess, pop culture and fatty foods, indie rock and single-malt scotch. Zombie Spaceship Wasteland is an inventive account of the evolution of Patton Oswalt ' s wildly insightful worldview, sure to indulge his legion of fans and lure many new admirers to his very entertaining "wasteland."
