M. Silva Significant changes have been occurring in industrialized countries since the Second World War. Production is moving towards sophisticated high quality products, economy of scale has been replaced by economy of scope, jerky demands are progressively replacing steady demands, and competitiveness is becoming a worldwide phenomenon. These trends require highly automated manufacturing systems with small set-up times and high flexibility. As a consequence,

implementation and running costs of modem manufacturing systems are drastically increasing, whereas their fields of application remain limited, and every day become even narrower, which increases the risk of early obsolescence. This is the reason why designers are trying to improve the preliminary design phase, also known as the 'paper study phase'. The preliminary design phase includes, but is not limited to, the functional specification, and the evaluation of the system. Many tools exist to support the

functional specification of manufacturing systems. IDEF0 is one of these tools. It leads, using a top-down approach, to a precise functional description of the required system. However, its use cannot be extended further. In general, the evaluation starts with a modeling step, which depends on the evaluation tool used, and ends by applying the model to find out its main dynamic characteristics. Two main approaches can be used to perform this task, namely simulation and mathematical approach. Using simulation, the modeling

tool is either a classical computer language, or a simulation language. This edited book concerns the real practice of human factors and ergonomics (HF/E), conveying the perspectives and experiences of practitioners and other stakeholders in a variety of industrial sectors, organisational settings and working contexts. The book blends literature on the nature of practice with diverse and eclectic reflections from experience in a range of contexts, from healthcare to agriculture. It explores

what helps and what hinders the achievement of the core goals of HF/E: improved system performance and human wellbeing. The book should be of interest to current HF/E practitioners, future HF/E practitioners, allied practitioners, HF/E advocates and ambassadors, researchers, policy makers and regulators, and clients of HF/E services and products.

SoSE, ESE, and CSE concepts and principles, the book highlights best practices and lessons learned as benchmarks that are applicable to other cases. If adopted correctly, the approaches outlined can facilitate significant progress in human affairs. The study of complex systems is still in its infancy, and it is likely to evolve for decades to come. While this book does not provide answers, it does establish a platform, through which analysis and knowledge application can take place and conclusions can be made in order to educate the next generation of systems engineers.

run the only sustainable competitive advantage is your organization's ability to learn faster than the competition. The leadership stories demonstrate the many ways that the core ideas of the Fifth Discipline, many of which seemed radical when first published, have become deeply integrated into people's ways of seeing the world and their managerial practices. Senge describes how companies can rid themselves of the learning blocks that threaten their productivity and success by adopting the strategies of learning organizations, in which new and expansive patterns of thinking are nurtured, collective aspiration is set free, and people are continually learning how to create the results they truly desire. Mastering the disciplines Senge outlines in the book will:

They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. Two experienced and visionary authors show how institutions and individuals can go beyond conventional and sustainable investing to address complex problems such as income inequality and climate change on a deep, systemic level. It's time for a new way to think about investing, one that can contend with the complex challenges we face in the 21st century. Investment today has evolved from the basic, conventional approach of the 1950s. Investors have since recognized the importance of sustainable investment and have begun considering environmental and social factors. Yet the complexity of the times forces us to recognize and transition to a third stage of investment practice: system-level investing. In this paradigm-shifting book, William Burckart and Steve

They preserve and strengthen these fundamental systems while still generating competitive or otherwise acceptable performance. This book is for those investors who believe in that transition. They may be institutions, large or small, concerned about the long-term stability of the environment and society. They may be individual investors who want their children and grandchildren to inherit a just and sustainable world. SYSTEM FAILURE provides a framework for understanding the ways in which education policy across organizational settings contributes to the school-to-prison pipeline, as documented in the literature and as observed by authors in empirical studies of justice-involved youth in regular public schools, juvenile court schools, probation settings, and alternative schools. Burch and contributors argue that education policy fails low-income justice-involved youth in three major ways: maintaining silence around issues of

structural racism and civil rights, marginalizing youth voice and culture and language, focusing on schools or the criminal justice system, and overlooking intermediate settings including the role of for-profit and not-for-profit education companies. While the problem of the school to prison pipeline has been well documented, the book adds critical detail and description of a policy process that tolerates the school-to-prison pipeline and stalls efforts to abolish it. The book is intended for educators, students, policymakers and practitioners interested in a comprehensive introduction to the policy issues as well as advocates doing serious work on the issues.

complex and unique stories of illness. The Principles and Practice of Narrative Medicine expresses the collective experience and discoveries of the originators of the field. Arising at Columbia University in 2000 from roots in the humanities and patient-centered care, narrative medicine draws patients, doctors, nurses, therapists, and health activists together to re-imagine a health care based on trust and trustworthiness, humility, and mutual recognition. Over a decade of education and research has crystallized the goals and methods of narrative medicine, leading to increasingly powerful means to improve the care that patients receive. The methods described in this book harness creativity and insight to help the professionals in being with patients, not just to diagnose and treat them but to bear witness to what they

undergo. Narrative medicine training in literary theory, philosophy, narrative ethics, and the creative arts increases clinicians' capacity to perceive the turmoil and suffering borne by patients and to help them to cohere or endure the chaos of illness. Narrative medicine has achieved an international reputation and reach. Many health care settings adopt methods of narrative medicine in teaching and practice. Through the Master of Science in Narrative Medicine graduate program and health professions school curricula at Columbia University, more and more clinicians and scholars have obtained the rigorous training necessary to practice and teach narrative medicine. This text is offered to all who seek the opportunity for disciplined training in narrative medicine. By clearly articulating our principles and practice, this book

emerged from a growing community of designers in various fields who work closely with social movements and community-based organizations around the world. This book explores the theory and practice of design justice, demonstrates how universalist design principles and practices erase certain groups of people—specifically, those who are intersectionally disadvantaged or multiply burdened under the matrix of domination (white supremacist heteropatriarchy, ableism, capitalism, and settler colonialism)—and invites readers to “build a better world, a world where many worlds fit; linked worlds of collective liberation and ecological sustainability.” Along the way, the book documents a multitude of real-world community-led design practices, each grounded in a particular social movement.
