In the civilised world there are enough raw materials, machinery, labour and scientific knowledge to satisfy the needs of all the inhabitants. Poverty and hunger exist because people have not enough money to buy all the output of modern civilisation at a fair price to the producers. When there is a shortage of anything the most obvious remedy is to create some more and there is no real difficulty in creating more money. PROMISE TO PAY shows how this should be done when money is backed by goods and services. The creation of money should be in the hands of the State or Head of Government and not in the hands

of private banking. The state would issue sufficient money to enable the buying power to keep pace with production. Paper money issued by banks is not real money but "Promise to Pay" money and the amount in circulation bears little relation to the amount of goods and services available. When there is less money than goods, people go short of food and clothes. When there is more money than goods prices rise and people pay more and more for less and less.

Broken Promises is the third book in a trilogy spanning 18 years. Bruce Kushnick, author, senior telecom analyst and industry insider, lays out, in all of the gory details, how America paid over \$400 billion to be the first fully fiber optic-based nation yet ended up 27th in the world for high-speed Internet (40th in upload speeds). But this is only a part of this story. With over four million people filing with the FCC to 'Free the

Net', one thing is abundantly clear -- customers know something is terribly wrong. Every time you pay your bills you notice that the price of your services keeps going up, you don't have a serious choice for Internet (ISP), broadband or cable service, much less competitors fighting for your business, or maybe you can't even get very fast broadband service. Worse, over the last few years, America's ISPs and cable companies have been rated "the most hated companies in America". While Net Neutrality concerns (detailed in Broken Promises) are important, the actions are only a first step and will most likely be tied up in court for the next few years. More importantly, it does not resolve most of the customer issues and there is nothing else on the horizon that will fix what's broken. Broken Promises documents the massive overcharging and failure to properly upgrade the networks, the deceptive billing practices, the harms caused from a lack of competition, the gaming and manipulating of the regulatory system, from the states to the FCC, and exposes the companies' primary strategy: How much can we get away with? There has been little, if any, regard for the customers they serve.--From
