Most people with eating disorders struggle to find an effective therapy that they can access quickly. Brief Cognitive Behavioural Therapy for Non-Underweight Patients: CBT-T for Eating Disorders presents a new form of cognitive behavioural therapy (CBT) that is brief and effective, allowing more patients to get the help that they need. CBT is a strongly supported therapy for all adults and many adolescents with eating disorders. This 10-session approach to CBT (CBT-T) is suitable for all eating disorder patients who are not severely underweight, helping adults and young adults to overcome their eating disorder. Using CBT-T with patients will allow clinicians to treat people in less time, shorten waiting lists, and see patients more quickly when they need help. It is a flexible protocol, which fits to the patient rather than making the patient fit to the therapy. Brief Cognitive Behavioural Therapy for Non-Underweight Patients provides an evidence-based protocol that can be delivered by junior or senior clinicians, helping patients to recover and go on to live a healthy life. This book will appeal to clinical psychologists, psychiatrists, psychotherapists, dietitians, nurses, and other professionals working with eating disorders.

Alternative protein sources are urgently required as the available land area is not sufficient to satisfy the growing demand for meat. Insects have a high potential of becoming a new sector in the food and feed industry, mainly because of the many environmental benefits when compared to meat production. This will be outlined in the book, as

well as the whole process from rearing to marketing. The rearing involves large scale and small scale production, facility design, the management of diseases, and how to assure that the insects will be of high quality (genetics). The nutrient content of insects will be discussed and how this is influenced by life stage, diet, the environment and processing. Technological processing requires decontamination, preservation, and ensuring microbial safety. The prevention of health risks (e.g. allergies) will be discussed as well as labelling, certification and legislative frameworks. Additional issues are: insect welfare, the creation of an enabling environment, how to deal with consumers, gastronomy and marketing strategies. Examples of production systems will be given both from the tropics (palm weevils, grasshoppers, crickets) and from temperate zones (black soldier flies and house flies as feed and mealworms and crickets as food).
